

# 1 square meter of land, ha calculated according to the land of the South, Central and North

1 square meter of land. This article will go with you to learn through the article below.

Vietnam is a country with very developed agriculture. However, this does not mean that we can understand the principles of conversion in agriculture.

In ancient times, when units such as acres, acres, acres . undeveloped, people often use the land to calculate the area of ??agricultural land. So 1 square meter of land. This article will go with you to learn through the article below.

## 1 square meter of land, hectares?

### Southern:

1 public land in Nam Bo = 1000m<sup>2</sup> = 1 / 10hecta (ha) which means 1 hectare = 10 such land (ha) will be the largest unit to convert the land.

In Central and Northern Vietnam, farmers still have a way to calculate and call their own land area unit like Nam Bo, which is basically a land, basically the same way to call a pole and a public is just the same The conversion of each region through standard m<sup>2</sup> will be different so the article will guide the exact conversion rate for you:

### Nave:

1 public = 1 pole = 360m<sup>2</sup>

## **Northern region:**

1 public = 1 sao = 500m<sup>2</sup>

Thus, through this article, we know that soil and soil are the same units, but in different regions, people have different names.

Hopefully with the above article we have provided you with lots of useful information about agricultural units.
