

10 changes the best settings that Siri can make on iPhone

Siri can be used to control some of the great features of the iPhone. Users can change the iPhone settings by giving commands and Siri will directly change the settings you require.

Siri can be used to control some of the great features of the iPhone. Users can change iPhone settings by giving commands and Siri will directly change the settings you require. This will help minimize the tasks you usually do to change phone settings. You just need to order and Siri will access anything in the iOS device.

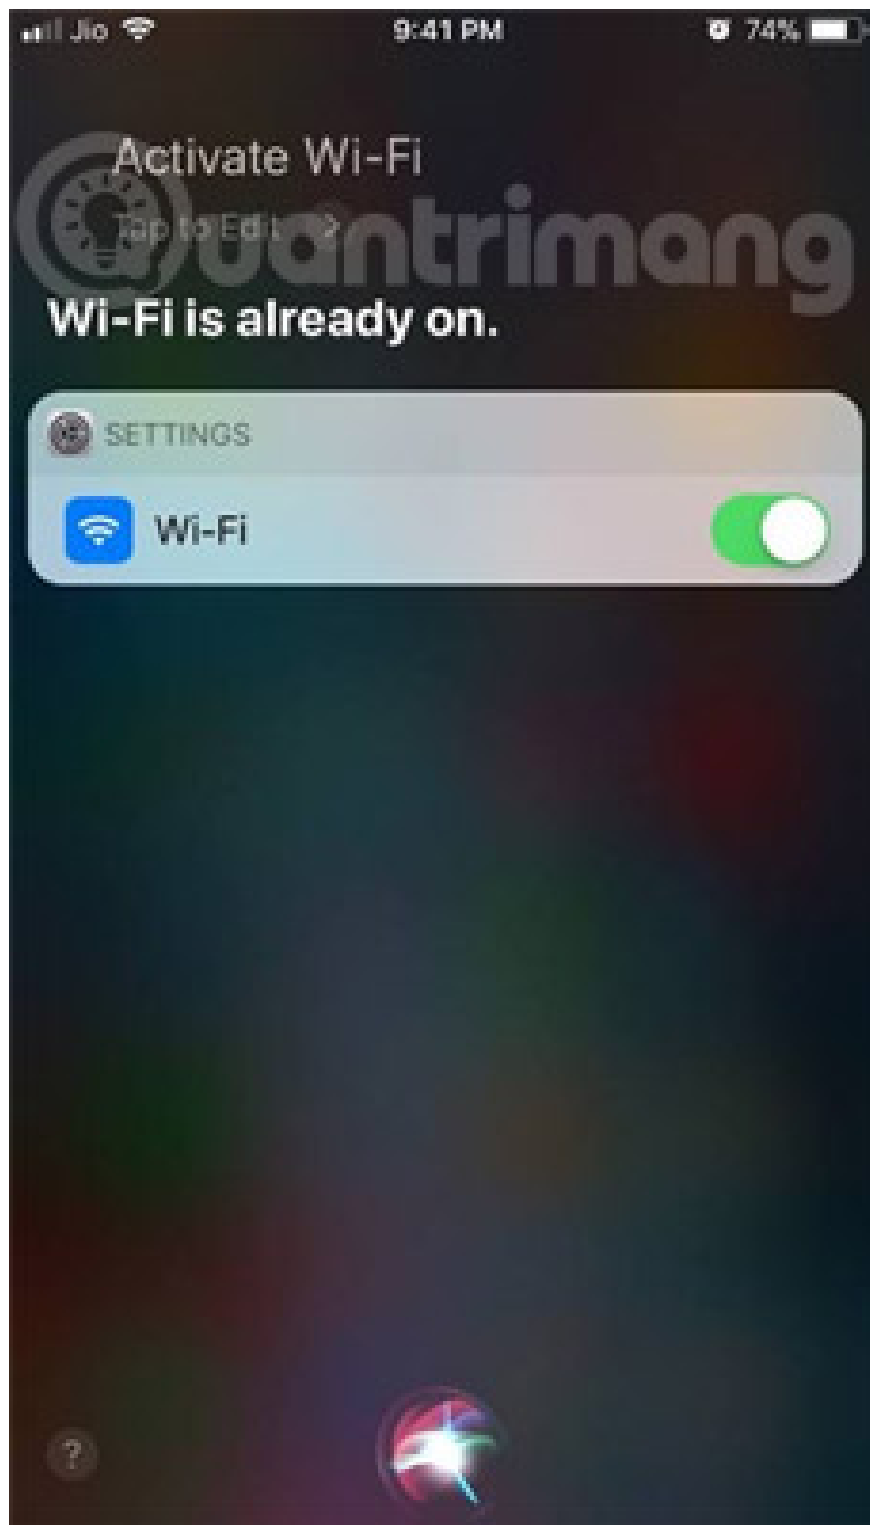

Virtual assistant or Siri features provide flexible conversations with the device. However, it cannot work with complex questions. Most iPhone users can use Siri for simple commands such as calling, sending iMessage messages to someone or performing currency dialogues, etc. Siri is undoubtedly the best virtual assistant to perform simple tasks. Although Siri currently can only perform the default tasks, users can still modify the command with Siri and issue commands to change iPhone settings. In this way, iPhone settings can also be changed directly through commands with Siri without touching the screen once. Here we will introduce you how to do that.

The implementation is quite simple and easy, you just need to follow the instructions below.

Modifiers are special keywords, when combined with other keywords and ordered to Siri, the device will immediately make settings changes via menus and options. To choose. To change different settings, different commands are required. For each installation that can be performed with Siri, we have compiled the commands corresponding to the Modifier.

Modifiers: Increase, Decrease, Activate (Open), Deactivate, Disable (Enable), Disable (Disable)

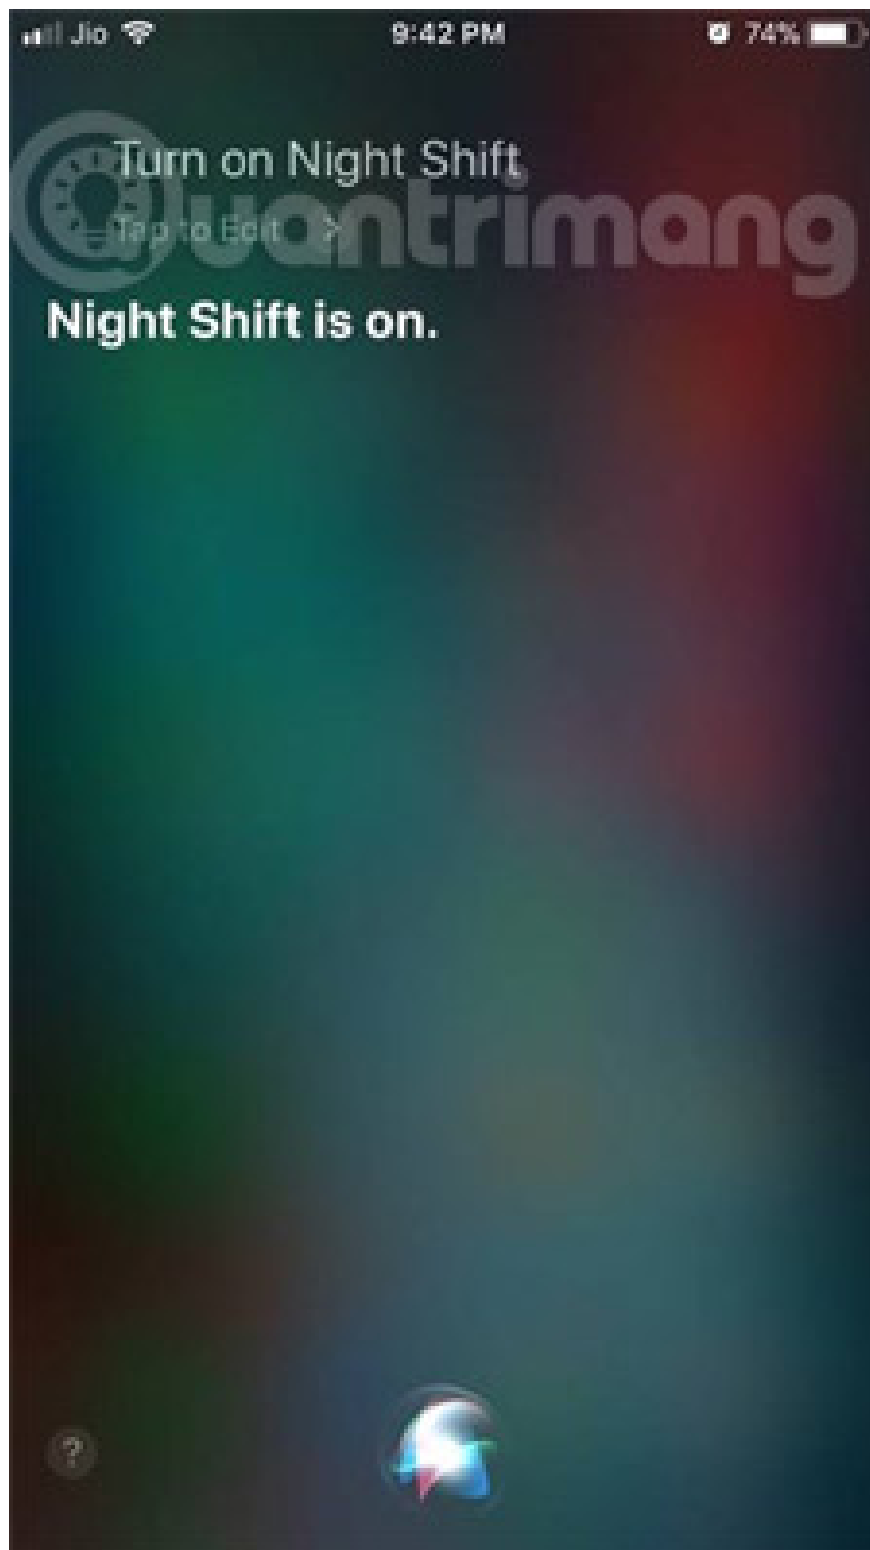

1 Activate / Deactivate WiFi (Say this command to Siri to enable or disable WiFi on iPhone)

2 Turn On / Off Bluetooth (Say this command to Siri to turn Bluetooth on or off on iPhone)

3 Turn On / Off Night Shift (Say this command to Siri to enable or disable the Night Shift feature on iPhone)

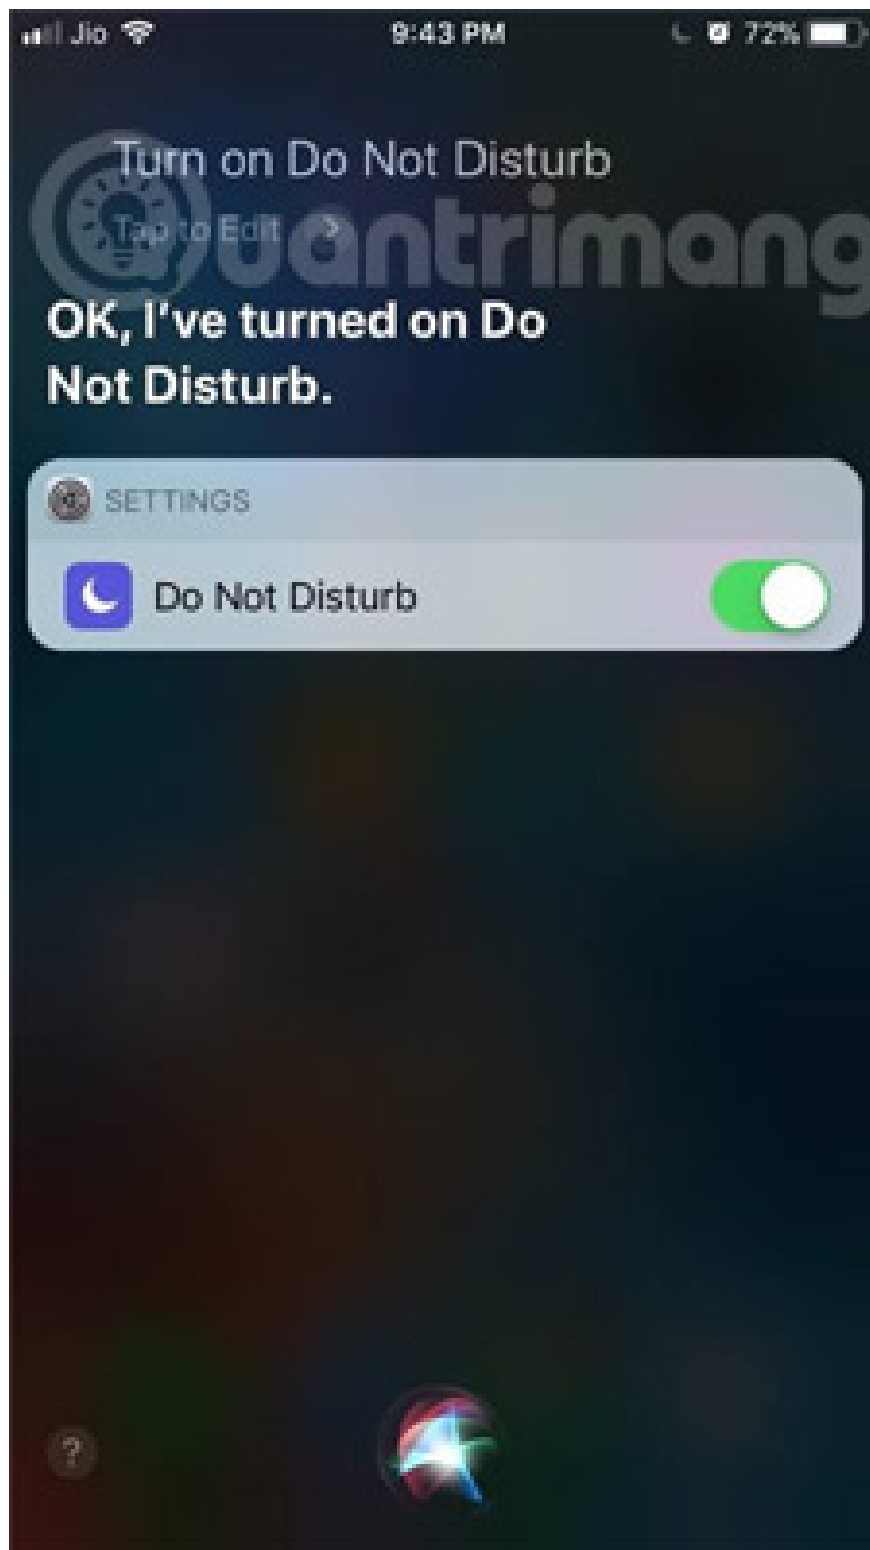

4 Turn On / Off Airplane Mode (Say this command to Siri to open or turn off airplane mode on iPhone)

5 Turn On / Off Data (Say this command to Siri to enable or disable Network Data on iPhone)

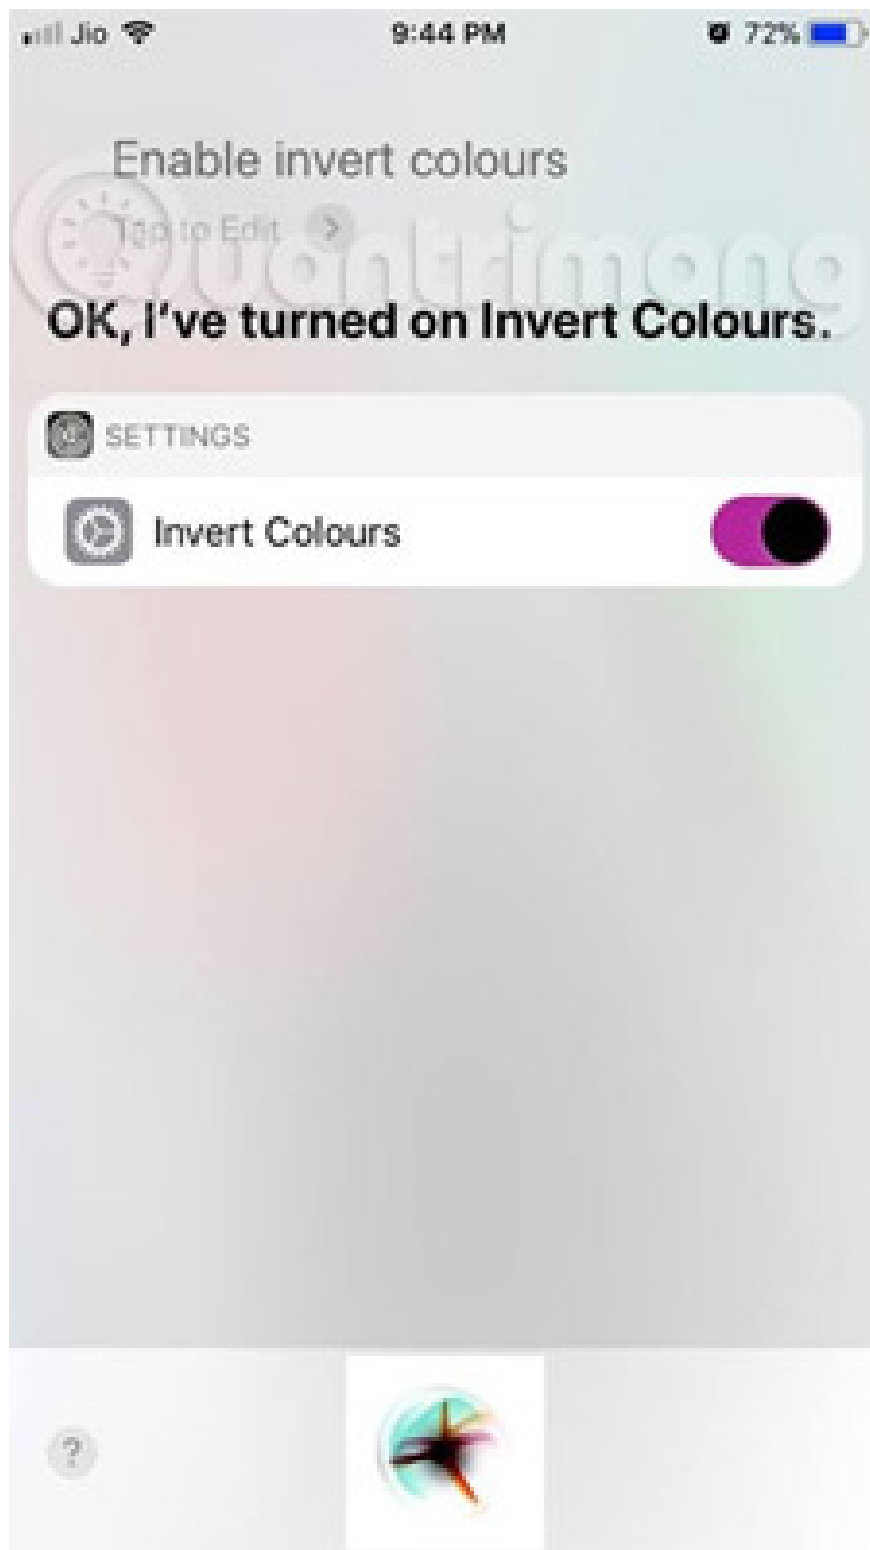

6 Turn On / Off Do Not Disturb (Say this command to Siri to enable or disable Do Not Disturb mode on iPhone)

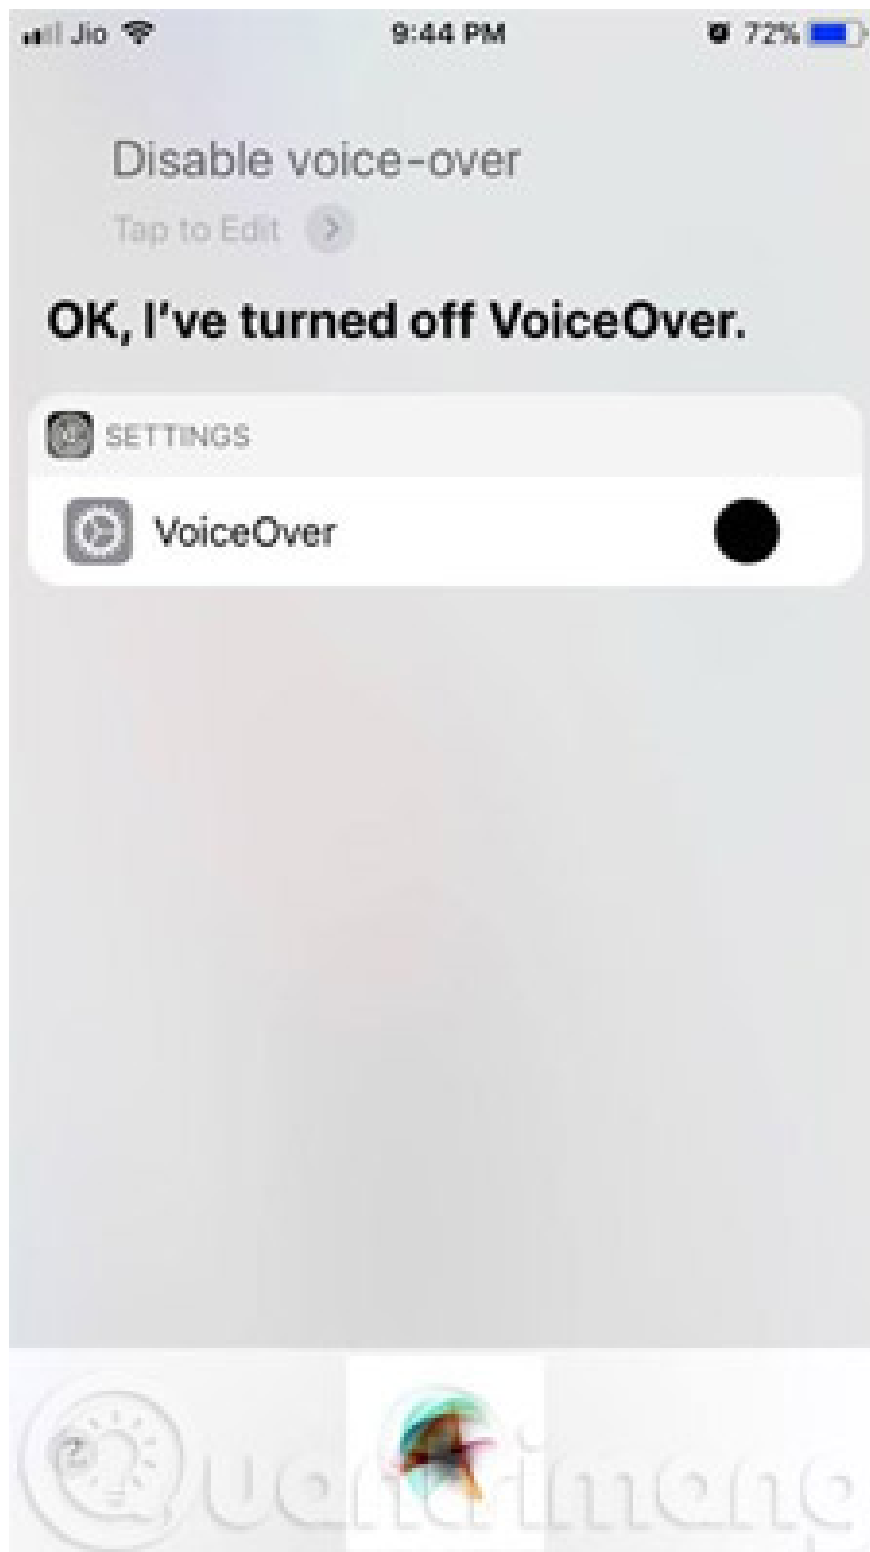

7 Activate / Deactivate Low Power Mode (Say this command to Siri to turn on or turn off Low Power mode)

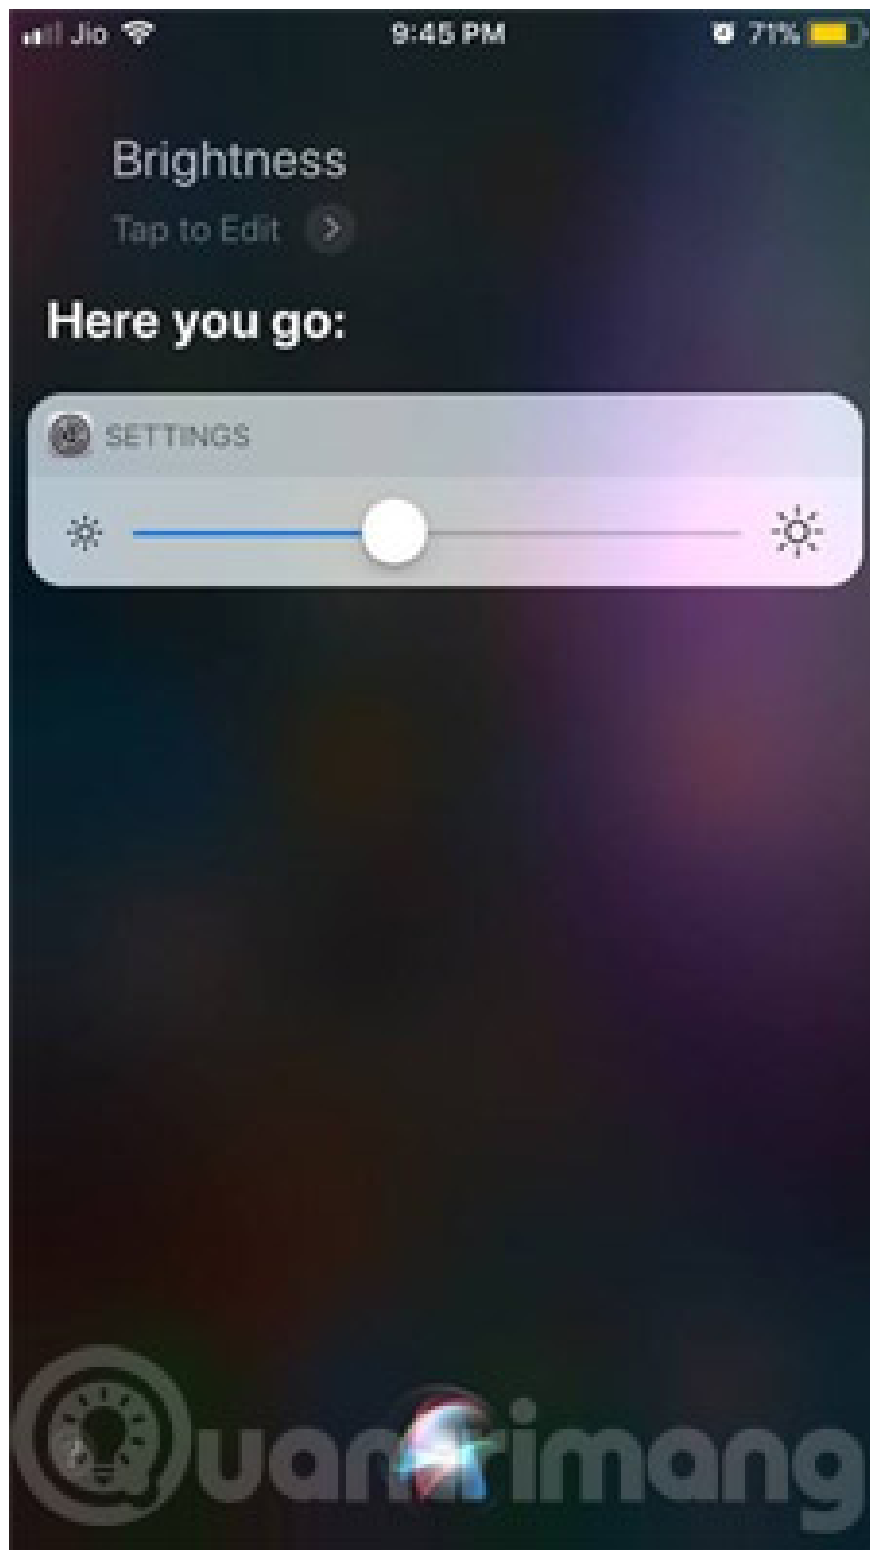

8 Enable / Disable Invert Colors (Say this command to Siri to enable or disable the Invert Color feature on iPhone)

9 **Enable / Disable VoiceOver** (Say this command to Siri to enable or disable Voiceover mode on iPhone)

10 Increase / Decrease Brightness (Say this command to Siri to increase or decrease the brightness on iPhone)

Hopefully with these Siri tips you will have a better experience on your beloved phone.
