

10 impressive design tools need to try now

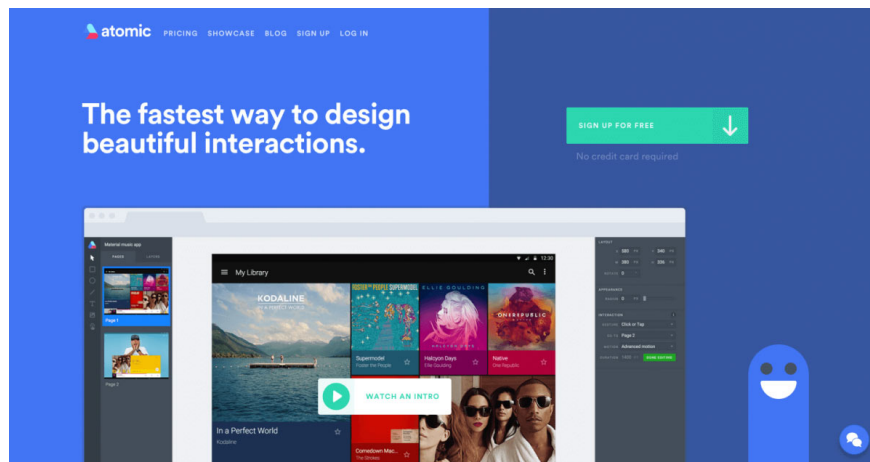

Design software is now not just Photoshop.

A survey of recent design support tools made by Khoi Vinh - one of the most influential designers at **Fast Company** in the US shows that Photoshop is losing its position "dominate" in the world " designer ".

The answers collected from more than 4,000 participants from nearly 200 countries clearly reflect a trend that designers around the world are becoming more open to many other support tools, not just stop in Photoshop. Because of these solutions, there are quite a few obvious advantages such as simplicity in the process of transforming into products, **wireframing** (defining design information systems, a very important process in companies). work related to interface design, **prototyping** and design of electronic products.

Here are 10 web design tools currently "storming" in 2016.
