

10 interesting applications from Google Labs

Google Labs is considered a 'repository' of unique ideas to diversify Google services. Here are 10 of the latest interesting application ideas from Google Labs.

Google Labs is considered a "repository" of unique ideas to diversify Google services. Here are 10 of the latest interesting application ideas from Google Labs.

1. Sky Map for Android

This app will turn the Android-based phone into a window full of information about the sky at night. It is possible that the children themselves or themselves will be interested in high heavenly secrets, or simply want to watch the stars in the middle of the galaxy. See more here.

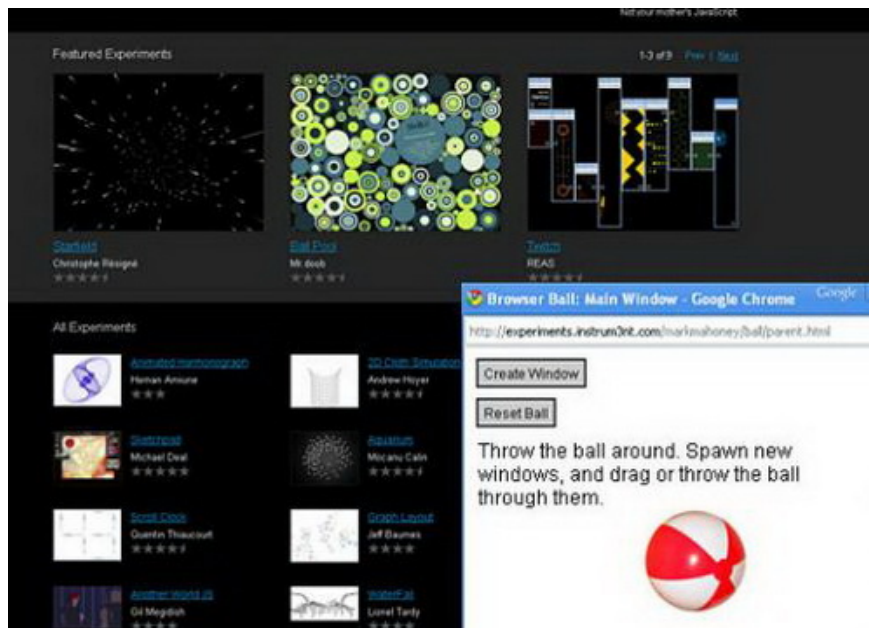

2. Google Fusion Tables

With this application, you will feel much easier to manage and monitor large amounts of data in datasets.

There are many reasons for Fusion Tables to be expected. The modeled dataset of dataset is currently widely used, can be used to monitor climate change information, build health charts, etc. Once the charts and maps are integrated and public published on the website, they will be able to automatically update the data. Users can synchronize data with the same tools, features, familiar filters of Google, really useful and equally interesting. Details here.

3. Chrome Experiments

This is a unique test of the Google Labs room. Only with JavaScript, technicians create interesting applications and games that can be used for entertainment. More detail here.

4. Google Audio Indexing

The screenshot shows the Google Audio Indexing interface. At the top, there's a search bar with 'economy' entered and a 'Search videos' button. Below the search bar, there's a list of search results for 'economy' on the left and a video player on the right. The video player shows a man speaking on a CNBC broadcast, with a play button overlay. The search results list includes items like 'Roskam on CNBC Discusses the stimulus the economy and the Obama Administration', 'Remarks Hearing The State of Our Economy', 'Steve Forbes Interview', 'Larry Kudlow Interview', 'How We Can Turn Our Economy Around', 'Barack Obama on John McCain Turning the Page on the Economy', 'A Stronger Economy', 'Rob Portman American Economy', and 'Rudy on the Economy'.

Using voice recognition technology, Google Audio Index allows users to search for videos containing the lines that the characters have said.

In the next few years, Google will surely make breakthroughs in its search engine thanks to a combination of new technologies.

According to experts, Audio Indexing is really perfect and this will be the foundation to improve the way we interact with online videos. Currently this project is 'hanging'. You can follow the details here.

5. Google Code Search

The screenshot shows the Google Code Search interface. At the top, there's a search bar with a 'Search Code' button and a link to 'Advanced Code Search'. Below the search bar, there's a green text prompt: 'Search public source code.' The interface is clean and modern, with a white background and blue accents.

Syntax and Examples [\(more about regexp syntax\)](#)

<code>regexp</code>	Search for a regular expression got2!gle hello\world ^int printk
<code>"exact string"</code>	Search for exact string "compiler happy"
<code>class:regexp function:regexp</code>	Search only in class and function names !real class:RTree function:laugh class:hash *multimap function: *range
<code>file:regexp</code>	Search only in files or directories matching regexp file:\js\$XMLHttpRequest file:include/ ioctl file:/usr/sys/ken/slp.c "You are not expected to understand this."
<code>package:regexp</code>	Search packages with names matching regexp. (A package's name is its UID, or CVS source information.)

This test will allow users to search for public source code.

As a programmer, you can use Google Code Search to avoid wasting time searching for source code. In addition, Google Code Search will also help you find useful resources from which to develop products. See more here.

6. Google Goggles

Google Goggles helps you use snapshots from your phone to perform a search.

Goggles is similar to Shazam on the iPhone, which can tell you which song is being played. There are times when you find something interesting, but don't know which key to use to search. With Goggles you won't need to worry. For example, Goggles will help you take a picture of the Golden Gate Bridge and immediately provide historical, weather, and neighborhood information. Remember, this application is completely different from Gmail Goggles. Details here.

7. Android Scripting Environment

android-scripting
Android Scripting Environment brings scripting languages to Android.

[Project Home](#) [Downloads](#) [Wiki](#) [Issues](#) [Source](#)

[Summary](#) | [Updates](#) | [People](#)

The Android Scripting Environment (ASE) brings scripting languages to Android by allowing you to edit ar directly on the Android device. These scripts have access to many of the APIs available to full-fledged An simplified interface that makes it easy to:

- Handle intents
- Start activities
- Make phone calls
- Send text messages
- Scan [bar codes](#)
- Poll location and sensor data
- Use [text-to-speech](#)
- And [more](#)

Scripts can be run interactively in a terminal, started as a long running service, or started via [Locale](#). Pytl and shell are currently supported, and we're planning to add more.

ASE is designed for developers and is *alpha* quality software. Please report bugs and feature requests or current APK by scanning or clicking the following barcode:

This application will help you edit and execute script scripts (scripts) directly from your Android device. If you are a programmer, you probably want to type, edit source code everywhere, even when . away from the computer! Please experiment with this application. See more here.

8. Google Moderator

"Should America ever have a national health care system?"

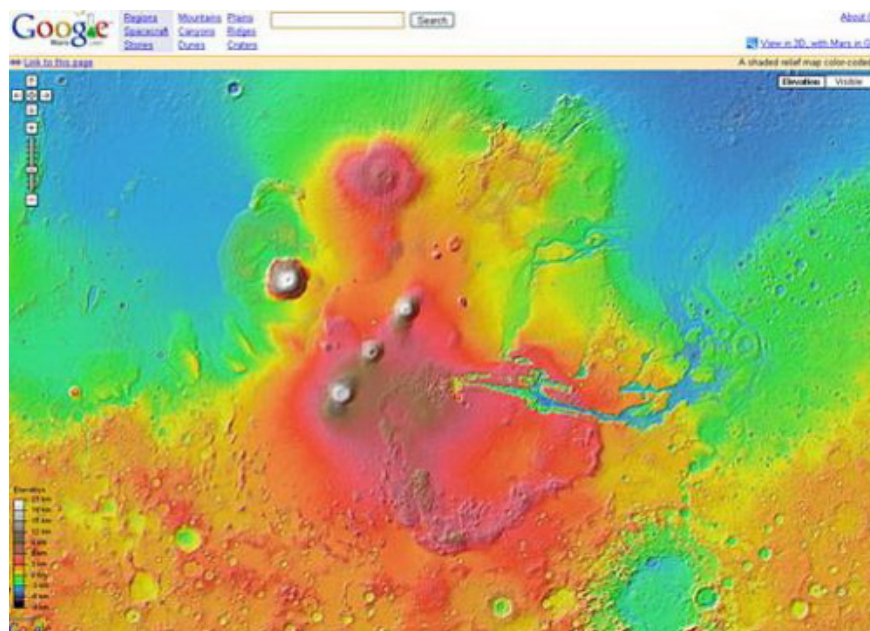

This application will help community users make reviews and comment lines with votes. Google Moderator is a simple tool that allows all members to participate in discussions without having to worry about the mess. Refer here.

9. Browser Size

This application will 'override' an interface frame on any web page, indicating how many% of online residents can track the content of page components. Since it is not based on a normal display or screen resolution, this tool helps developers and web designers know exactly and instantly which components are likely to 'lose shape' during use. , users can not reach . Details here.

10. Google Mars

Similar to Google Earth, but this product is for . Mars. Google Mars is a great wallet app. If there is life on Mars, Google Mars will allow users to observe the top of the houses above. In addition, Google Mars, simply revealed an interesting fact that it seems that Google has set foot on this planet. See details here.
