

10 'interesting' maps prove the world population is unevenly distributed

The world population is unevenly distributed across territories, in fact it is difficult to believe that it is true. The simple reason for this is because the terrain in many places is not suitable for humans to live.

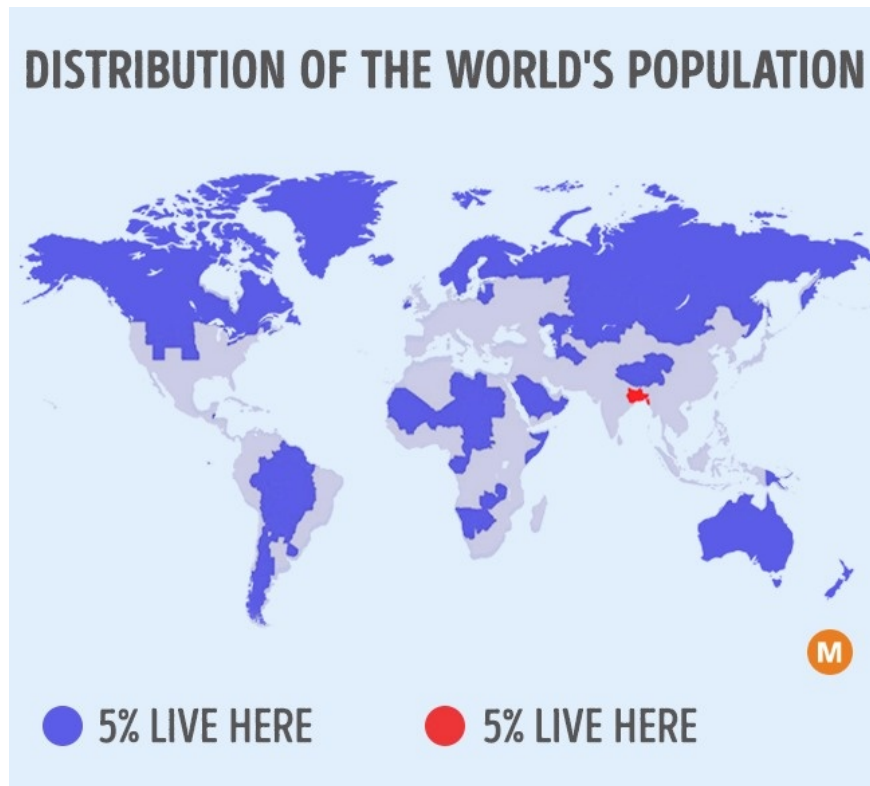

The world population is unevenly distributed across territories, in fact it is difficult to believe that it is true. The simple reason for this is because **the terrain** in many places is not suitable for humans to live.

Although our planet earth is large enough to accommodate billions of people, it does not mean providing enough food to feed them. The maps below will show us clearly what we are thinking at the present time is completely different from reality.

To understand more, see the facts about the world's population through **10 "interesting" maps** below. They will surprise you!

Observe **the world map** at the top: the area where many people live (*50% of the world's population*) is illustrated by small, small dots of color combined with 50% of the world's population in illustration in black.

The map above illustrates **Italy** 's population density, they are only in 8% of the whole country area. The main reason is because the central part of the peninsula is mainly hills and mountains.

© metrocosm

Besides, even the population density in **Australia** has made many people more curious: nearly 11 million people (*half of Australians*) live in the area designated by tiny red.

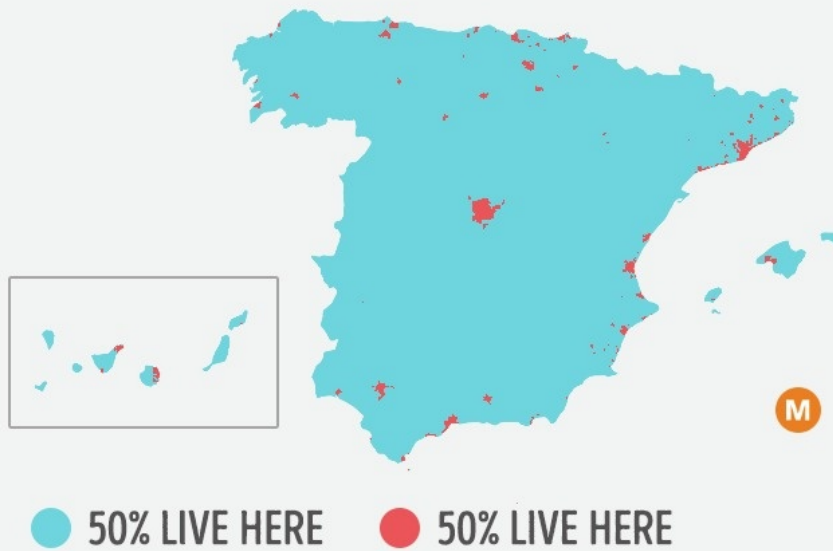

POPULATION OF THE UNITED STATES

© metrocosm

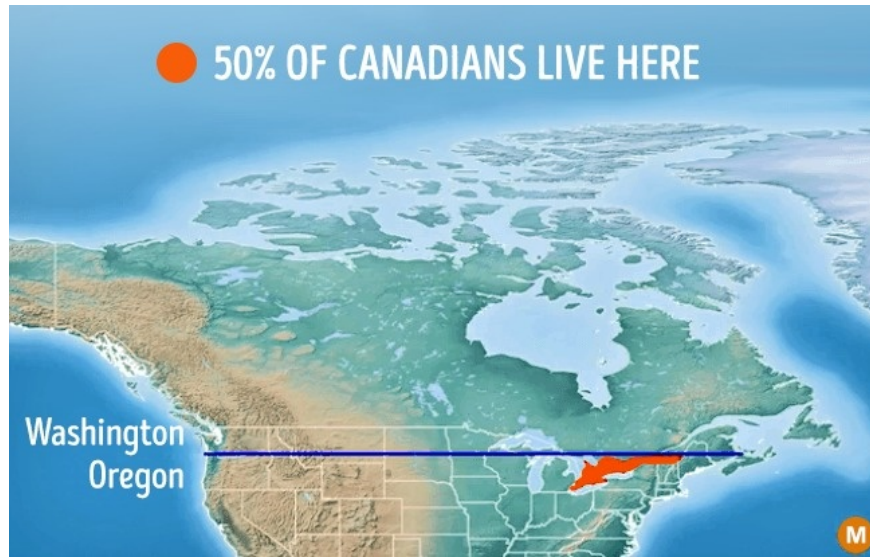

About 50% of the US population is distributed evenly in major cities in the United States. The largest red area is California, the most populous state.

POPULATION OF SPAIN

© metrocosm

About 90% of the territory of **Spain** is mountain. That's why people in Spain live in 10% of the remaining area.

Historically, the border between the United States and Canada lies along latitude 49. Strangely, 50% of the **Canadian** population lives nearby - the red area, which is roughly the same latitude as Oregon (*one state in the Pacific Northwest of the United States*).

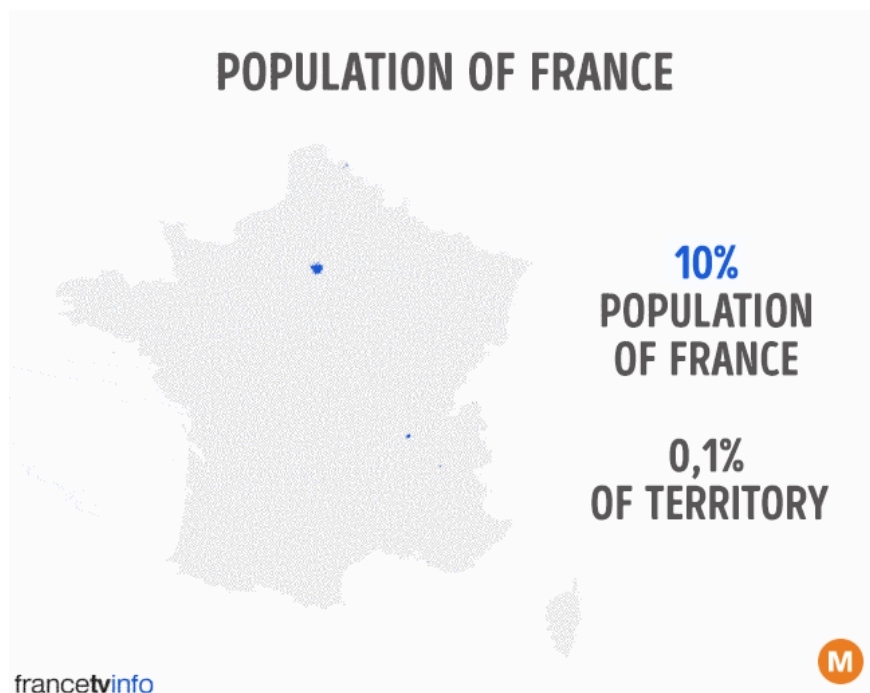

© metrocosm

Most of the terrain in **Turkey** is mountains, only a small percentage of the land is suitable for building high-rise buildings. This explains why the above map shows such density of population living in Turkey.

© metrocosm

Sahara Desert is one of the harshest places in the world. It almost occupies the entire northern region of Africa. The two areas designated in red represent the two largest cities of the Kingdom of Morocco, namely Casablanca and Rabat, as well as the area along the banks of the Nile River in Egypt.
