

# 10 phones of particular importance over the past 10 years

Here are 10 phones that have been of particular importance in the evolution of mobile phones over the past 10 years.

Here are 10 phones that have been of particular importance in the evolution of mobile phones over the past 10 years.

## **iPhone 4 (2010)**

iPhone 4 is a modern smartphone that introduces many new features, first appeared on phones such as front camera, Facetime, selfie. It is also the phone used by Apple to introduce Retina display technology, an ultra-high-resolution screen that has become an indispensable standard for high-end phones.

The iPhone 4 was also the first popular phone to use the "mirror sandwich" design, a popular design trend today.

## **Galaxy Note (2011)**

When it first launched, the Galaxy Note's 5.3-inch large screen seemed strange, but then it attracted users. The Galaxy Note has made users realize the convenience of a large screen, thereby making smartphone manufacturers pay attention to expanding the screen of their phone products.

The Galaxy Note is also the device that proves that the phone is not only for making calls or entertainment, but can also be used for real work.

### **Moto G (2013)**

The Moto G is quite cheap at \$ 179, even considering the 2013 standards have proven to us that it is not necessary to spend a fortune to get a smooth Android experience. Although only a mid-range configuration, sometimes Moto G also gives users a smoother feel than flagship devices. That's because Moto G has almost no junk software, thanks to Motorola's not customizing Google's operating system.

#### **OnePlus One (2014)**

This is the first generation of OnePlus, proving that it can deliver devices with competitive configurations that still ensure the processing quality but with a much lower price than competitors.

#### **Amazon Fire Phone (2014)**

This is a failed product of Amazon, it shows it is difficult to encroach into the smartphone market with a new platform.

### **Xiaomi Mi Mix (2016)**

The Mi Mix is ??the first big phone to bring a bezel-less design to the market, turning the once-unrealistic idea into a beautiful tangible product.

### **Google Pixel (2016)**

The original Google Pixel was a breakthrough, claiming that Google was no longer a mere software company, and it set a new standard for a "pure" Android experience. Google Pixel with HDR + display technology is also the biggest leap in terms of smartphone image quality, increased bandwidth, reduced noise, sharper, more realistic colors and improved white balance.

### **iPhone X (2017)**

Although not the first bezel-less phone, the iPhone X helped popularize the design and the notch.

iPhone X with gesture navigation system has brought users a whole new way of using iOS. The smartphone also claims that face recognition is a viable form of biometric authentication, which is more secure and more convenient than fingerprints. Unfortunately, it kicked off the era of sky-high \$ 1,000 smartphones.

### **Huawei Mate 20 Pro (2018)**

The Mate 20 Pro is the first phone to feature a super wide-angle, regular, and telephoto lens combo.

### Galaxy Fold (2019)

The Galaxy Fold has a less successful launch, but in the future, foldable smartphones will certainly become a new trend in the future.

1. Top 4 best smartphones of 2019
2. The most forgettable technology products in the last decade
