

10 photos reveal the facts about life that amaze you

Here are 10 rare photos stripping naked the series of facts about life that can confuse you and understand everything around you.

Life always contains incredible facts waiting for us to discover. Here are 10 rare photos stripping naked the series of facts about life that can confuse you and understand everything around you.

The white heart below is the donor's heart after it has been cleaned of the cells, leaving only the protein structure. Before transplanting, the heart will be injected into the recipient's stem cells to avoid new body rejection.

Right from the moment of birth, the flamingos have owned spindly legs but their fur is gray and not the typical pink. When the flamingos are consumed with bright red milk secreted from the upper digestive glands of their parents, their feathers turn pink. When mature, flamingos continue to eat red and blue kelp filled with beta carotene - an organic chemical with orange red pigments. Their bodies metabolize and synthesize substances to maintain their characteristic pink color.

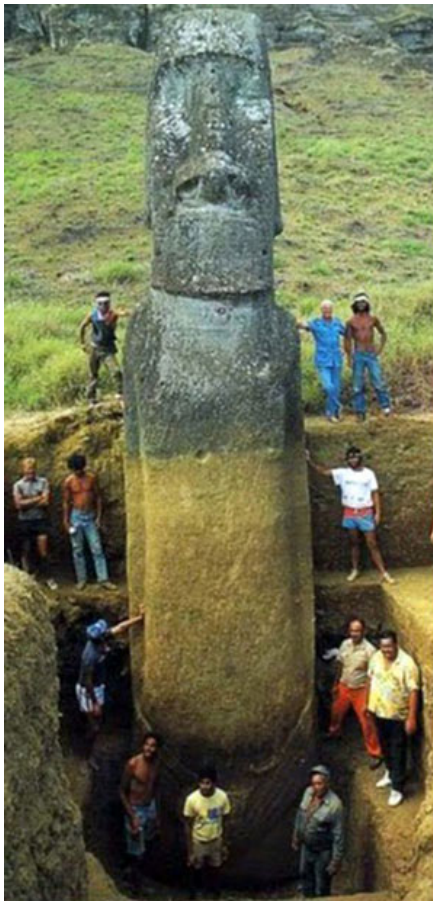

The whole human nervous system (from the brain to the feet) is shaped like the image below. In 1925, two medical students in Missouri State, Shalck and Ramsdell, operated on a deceased patient and successfully separated the intact nervous system from the brain down to the feet. This process lasts for 1,500 hours (62.5

days). The specimen is currently on display at the State's Osteopathic Medicine Museum at ATSU. Worldwide there are only 4 perfect specimens like this.

The giant stone statues of Easter Island also have a body, only that part buried in these statues. Ancient Polynesians have made these huge full-bodied statues between 1100 and 1500.

Under the tiger's thick coat is a dark skin and an extremely "intrusive" pattern of fur.

The skin on the underside of the glass frog is completely transparent, allowing us to see their internal organs and even their pounding dark red heart. Glass frogs live mainly in rain forests in South American countries like Costa Rica, Panama, Colombia and Ecuador.

An albino cat bears its white fur, which is completely different from the normal black-gray fur alternating some white streaks. This is unfortunate for this cat bear because it cannot disguise and become an easy target for

predators.

The globe with tiny round dots made of wood by the visually impaired.

The extremely rare moment of recording the moon's dark scene that passes through Earth captured by NASA at a distance of 1 million miles.

Some starfish have squares due to genetic mutations.
