

10 photos showing how small people are in the ocean

You always imagine how the ocean creatures live and how big it is? Take a look at the following 10 photos to answer your questions about the ocean.

The ocean and rivers are always full of interesting things and dangers that make us humans feel curious and want to discover them.

Deep under the vast blue ocean there are many mysteries and giant creatures. The 10 photos in the article below will show you how small people are before the immense creature and ocean. Invite you to take a look at the article.

1. Survival race

This photo captures a very close moment of a shark trying to chase a kayak in the open sea. Through the image, it can be seen that this shark has a much larger size and weight than a boatman. Can you guess if the boatman escaped this pursuit?

2. Giant jellyfish

If you look at this picture, do you think it's a jellyfish? At the size of the picture, this jellyfish can easily swallow a bus.

3. Giant python portrait picture Anaconda

Anaconda is one of the largest pythons in the world. They have the same genus as snakes, often hiding in marshes, rivers and forests of the South American region and the Amazon basin. Anaconda consists of 4 species including blue, yellow, black and white spots and Bolivian species. To get this (true) image, the photographer must be a very strong person.

4. Shark jaws

Sharks are a group of fish in cartilage class, hydrodynamic body easily turn water, there are 5 to 7 gills along each side or near the head (the first slot behind the eye is called breathing hole), the skin has many spines Small body covering against parasites. This is the moment that everyone who sees it will shudder about the sharp and dangerous teeth of this fish.

5. Show of stingrays

Stingray is a species with flat body, fanless shape, long tail, small head. The common feature of stingray is cartilage, flattened shape, the head of the abdomen is rounded and looks like a fan, the tail of fish is outward like a fan.

This is a unique image of the rays and humans, a rare creation of harmony between humans and marine creatures.

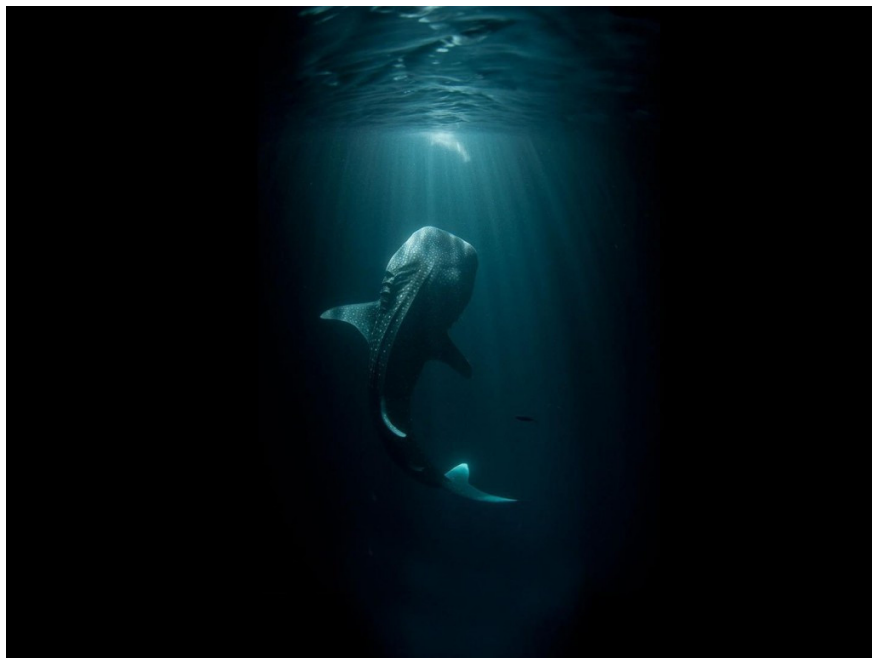

6. Friendly octopus

Octopus is an oval, soft, short-bodied creature of the Octopoda family living on the seabed. Octopus has 3 hearts and is a very intelligent animal, which can be smarter than any mollusk. The octopus's intelligence and learning ability are still being debated by biologists.

Through this photo can be seen, octopus is a very friendly and intelligent type as they are.

7. Giant whale shark

Whale shark or whale shark. It is the largest shark and is also one of the largest surviving, largest-sized fish species. Whale shark live in oceans in the tropical and warm temperate regions of the world. They look so fierce, but they are not dangerous to humans because tiny teeth should only eat zooplankton, large algae, mollusks and squid and small vertebrates.

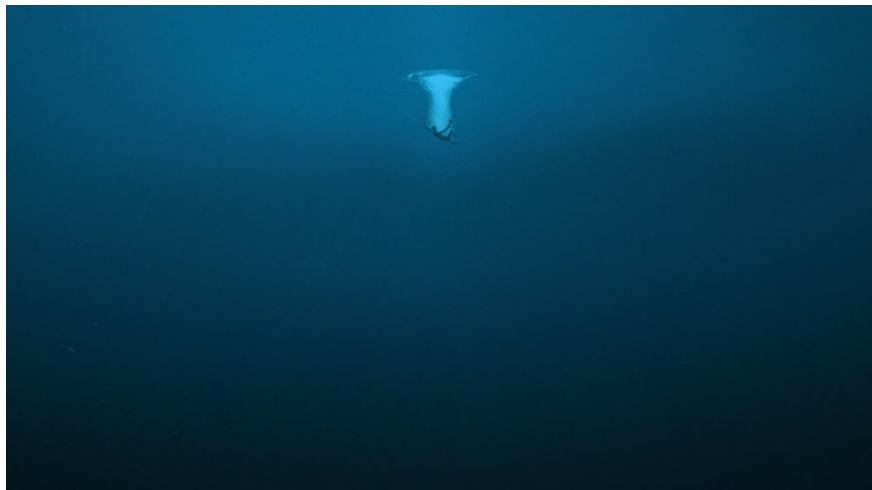

8. Death wave

White sharks also have other names such as white needles, white death. It is a very large fish and the largest carnivorous fish in existence.

White sharks, though aggressive, but rarely attack humans, unless they mistakenly think humans are a regular food (seals, sea turtles .) or when they are too hungry.

9. The silence of the ocean

The photo shows the time when divers dive into the vast ocean, a picture that makes people see divers looking lonely in the middle of that vast ocean.

10. Riding on the giant's back

Blue whale is the largest animal in the history of existence and the heaviest weight still exists on earth. Through this photo, we can feel just how big a blue whale is.
