Tipsmake.com will share 11 websites where you can download subtitles for free, including English, Indonesian or Chinese subtitles, etc.

While many people hate subtitles, there are those who cannot watch movies without them. Watching movies with subtitles is very good, because subtitles help you better understand what the actors are saying, especially when watching foreign movies or the actors' accents are a bit hard to hear.

But what happens if a movie you're watching doesn't have subtitles? You'd love to know where you can download subtitles for free, right? Here, **TipsMake** will share 11 websites where you can download subtitles for free, including English, Indonesian or Chinese subtitles, etc.

## How to load subtitles for movies and TV shows

Most free media players will automatically detect and load subtitle files as long as you title them properly.

In almost all cases, all you have to do is copy the exact filename of the movie or TV show and paste it as the name of the subtitle file. This works with most video file formats (e.g., AVI, MKV, MP4) and most popular subtitle file formats (e.g., SCC, SRT, SUB, VTT). You must also make sure that both the video file and the subtitle file are in the same location.

Once done, launch the video file and your media player will automatically load the subtitle file.

What happens if the media player doesn't load the subtitle file? Or if your video file has built-in subtitles and you want to overwrite it with the subtitle file you just downloaded? In that case, you will have to load the subtitle file manually and switch the track in your media player.

## How to manually convert subtitle tracks for videos

The article will demonstrate using VLC, the most popular media player application in the world.

To load a subtitle file manually, even one that is not in the same location as the video file:

1. Launch the video file in VLC.
2. In the **Subtitles** menu , click **Add Subtitle File** .
3. Navigate to the subtitle file, select it and click **Open**.

To switch to a subtitle file other than the built-in subtitles in some video files:

1. Launch the video file in VLC.
2. In the **Subtitles** menu , navigate to **Sub Track > Track #** .

You can load multiple subtitles (as many as you want) and switch between them as you like. This is especially useful for certain movie files, especially in MKV format, which come with multiple subtitles in many different languages. This is one of VLC Player's many great secret features.

No doubt, the Internet is full of websites to download subtitles and you can get subtitles in any language in the world. The above websites are great and you can recommend them to anyone looking for subtitles online.

But if you like watching all your movies with subtitles, but don't like the idea of ??having to download subtitles manually every time, you can check out online media players like BS Player.Net, which support subtitles. Built-in automatic subtitle download feature.
