

11 features Siri can do when iPhone is not connected to the network with iOS 15

Even without an internet connection, you can still ask Siri to perform a variety of tasks if you have iOS 15 or iPad OS 15 installed.

If you're used to using the Siri virtual assistant, remember that Siri can still work without an internet connection.

Check out this list of useful Siri offline commands on iPhone and iPad that include messaging, networking, setting timers, and more.

Launch the app

Siri no longer crashes when asked to open Photos, Camera, Settings, Twitter, or some other apps offline. You can now say things like 'Open Photo' or 'Open Twitter' while offline to instantly see the requested app working again.

Music playback control

Picture 1 of 11 features Siri can do when iPhone is not connected to the network with iOS 15

You can now change the volume, play/pause music, and go forward/backward while Siri is offline. Just state your desire for media playback controls and Siri will force it, even if your device doesn't have an internet connection.

Switch to Dark mode

In addition to quickly toggling Apple's system-wide Dark Mode preferences through the Control Center, you can now ask Siri to do the same even when you don't have an Internet connection.

Set alarm

One of the most used voice commands is now available when Siri is offline. Now it's 'Hey Siri, set my alarm for 5am', 'Hey Siri, set my Work alarm', 'Hey Siri, what alarm did I set?' it will work perfectly without network connection.

Set a countdown timer

Cooking, camping, and traveling without a cellular connection just got easier with the ability to use Siri in offline mode. Just say your voice commands out loud, such as 'Set timer for 3 minutes' or 'Stop timer', without worrying about whether Siri is online or offline.

Read new messages

Picture 3 of 11 features Siri can do when iPhone is not connected to the network with iOS 15

Siri can read your texts and iMessages while offline. Just say out loud a command like 'Read my new messages' or similar. This feature also supports other applications like Whatsapp.

Customize brightness

The dedicated slider in Control Center is the fastest way to adjust brightness, but sometimes you want precise brightness levels, such as 45 percent. Instead of going to Control Center, you can invoke Siri while offline and give brightness-related commands like 'Increase Brightness', 'Decrease Brightness', 'Set Screen Brightness to 35%', or one same command number.

Airplane mode switch

Picture 4 of 11 features Siri can do when iPhone is not connected to the network with iOS 15

Now, voice commands like 'Turn on airplane mode' and 'Turn off airplane mode' will do the trick whether Siri is online or offline. This is useful if AirPlane mode is on and you want to turn it off with your voice, but Siri lacks an internet connection.

Wi-Fi Switch

Another setting you can change with Siri offline is Wi-Fi. With voice commands like 'Enable Wi-Fi' or 'Turn off Wi-Fi', you can quickly turn off Wi-Fi network connections.

Bluetooth Switch

Picture 5 of 11 features Siri can do when iPhone is not connected to the network with iOS 15

This allows you to quickly switch Bluetooth when Siri is offline with voice commands like 'Turn on airplane mode' and 'Turn off airplane mode'. When turning off Bluetooth via Siri, iOS turns off the Bluetooth radio completely.

Switch mobile data

Just like with Wi-Fi and Bluetooth, you can now use your trusted Siri assistant to quickly turn cellular data on or off, even when Siri is offline.

Hopefully, this information will provide you with useful options to make using Siri virtual assistant simpler and easier.
