

## 11.6-inch netbook is ready

This year, LCD-based manufacturers will produce 11.6-inch screens for netbooks. Thus, this mini laptop will soon reach the size of a regular laptop.

**This year, LCD-based manufacturers will produce 11.6-inch screens for netbooks. Thus, this mini laptop will soon reach the size of a regular laptop.**

The 7-inch size of the Eee PC has been broken by 8.9-inch screen netbooks; 10 and upcoming is 11.6 inches. When the netbook market exploded with Asus Eee PC models, LCD panel manufacturers became familiar with the 7-inch LCD screen. However, this size does not last long but is bulging, from 7 to 8.9 and 10 inches, most recently up to 12 inches. This year, they will make a new standard for netbooks - 11.6 inches - not to be confused with a 12-inch screen laptop.

It is expected that by the third quarter of this year, 11.6-inch screens will be unveiled, but Acer and Asustek Computer (better known by the name Asus) have quickly booked. Thus, most likely last year, the 11.6-inch

screen netbook will debut.

This screen size has two advantages. First, it displays a full resolution of 1366 x 768 pixels, which is more affordable than the 10.1-inch model. In addition, larger machine size means the keyboard is expanded. Maybe in this netbook model, the keyboard will reach the standard close to the laptop.

In addition, the 11.6-inch netbook will not be confused with the 12-inch screen laptop on the market.
