

# 14 million users have publicly posted their private posts due to Facebook's error

Recently, Facebook has released an official announcement and apology about a bug that caused the postings of 14 million users created on Facebook to be moved to the default privacy settings.

Recently, Facebook has released an official announcement and apology about a bug that caused the postings of 14 million users created on Facebook to be moved to the default privacy settings.

This error has appeared since May 18 and this issue was fixed on May 22, and May 27, all posts during that time were revised to the privacy that users set up earlier. Facebook has also sent a notification to the user who has failed, invited them to review the posts during the error time and if necessary, edit it.

## Please Review Your Posts

Emily, we recently discovered a technical error between May 18 and 27 that automatically suggested a public audience when you were creating posts.

We apologize for this mistake. The problem has been fixed, and we changed the audience of any posts you made to what you had been using before, just in case. You can go to [Activity Log](#) to review the posts you made during this time.
