

# 17 stunning photographs taken under a microscope reveal a whole new world

Here are 17 stunning photos taken under a microscope revealing a completely new world - each with a completely separate universe!

Our world has many interesting things, it is hundreds and thousands of times what we have observed with the naked eye. The simple way to convince people to believe this is **to observe everything under a microscope** . Nikon's Small World "Nikon Small World" contest - held annually to search for photographs of the world of microorganisms, viruses and microscopic objects under microscope magnification. A mystical world with deadly beauty but also full of art and charm is obscured so we cannot see it.

Here are 17 stunning photos taken under a microscope revealing a **completely new world** - each with a completely separate universe!
