

## 2 The best software to listen to music on computer

Currently there are many completely free music software, providing many functions for users. Here I would like to introduce 2 free software, good music for windows worth to experience them.

Windows Media Player is the default music player software on windows, although there have been many improvements in the versions, but the function is not enough to comfort music devotees.

Currently there are many completely free music software, providing many functions for users. Here I would like to introduce 2 free software, good music for windows worth to experience them.

### 1. WinAMP software

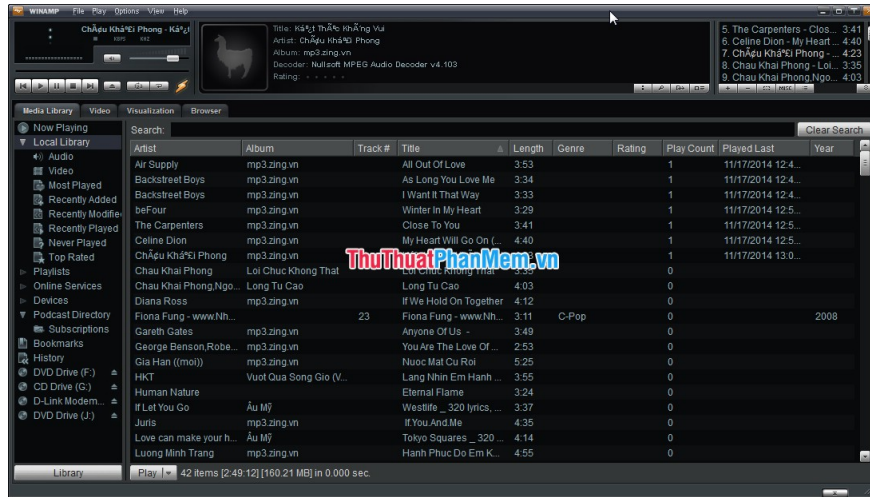

WinAMP (short for Windows Amplifier) is a free software that supports over 16 different languages worldwide. The program has a simple interface but very useful, helping you to classify and manage audio and video files .

WinAMP supports more than 60 audio formats such as MP3, OGG, AAC, WAV, MOD . WinAMP has not a large number of different interfaces, you can optionally change it to suit your personal preferences. . Also you can create detailed or extended playlists.

You can download WinAMP completely free at: <http://www.winamp.com/>.

After installation, the interface of WinAMP is as follows:

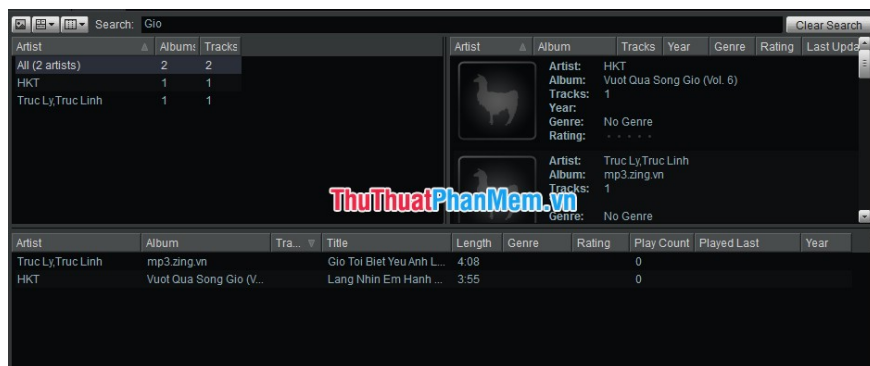

You can add playlists to WinAMP, the artist list management program (Artist) included in the playlist:

List of songs in the music list:

Search:

When transferring music, the program displays a small notification at the bottom right of the computer screen:

Along with a series of features on the left menu bar of the program:
