Leaning Tower of Pisa is one of Italy's most iconic landmarks and is also one of the most exotic attractions in the world. Millions of tourists visit the tourism every year because they can freely **take virtual photos** in a way that is unlike any other in the world. **Please join us through 20+ types of photos to take virtual life, make clever games with Pisa leaning tower below!**

In 1173, the Pisa cathedral complex began to be built with a white marble bell tower, located in central Italy. Five years later, when the tower was completed to the third floor, it was discovered that **the foundation of the tower was uneven**, including a mixture of clay, sand and shells.

As a result, the tower began to tilt sharply to the south. Shortly thereafter, war broke out between Pisa and Genoa, a city in Italy, causing the construction of the Pisa tower to stop for nearly a century. When the building was continued to be built, Chief Engineer Giovanni di Simone tried to add a foundation to the side that was tilted but due to the added weight of the tower it made it more inclined.

After nearly 2 centuries from the start to 1370, the tower was completed but it continued to tilt further for the next 6 centuries. **Each year the Pisa tower continues to tilt about 0.05 inches and may be at risk of collapse .**

In 1990, Pisa tower **tilted 5.5 degrees** . Therefore, the tower is closed so that engineers continue to make steady efforts. By 2001, the tower was reopened and only 4 degrees were tilted. Until 2008, it was stable. Now engineers believe that Pisa tower will be so stable in 200 years unless earthquakes or natural disasters occur. Therefore, an architectural wonder is formed by all three elements: nature (*land*), society (*war*) and people.

1. Giant Pisa ice cream cone

2. Even the dog is happy to help the tower

3. People who are short in pieces but somehow understand how to measure height

4. It's easy to climb down like it is, it's a leaning tower, it's different
