Here are the 25 most beautiful Milky Way photos selected by Capture the Atlas blog site from a collection of the best night sky photos all over the world from photographers from countries like Namibia , New Zealand, Chile, Australia, Antarctica .

The Milky Way is a spiral galaxy, when viewed in a direction perpendicular to the ground, the center of which is enlarged and surrounded by four large spiral arms. The diameter of the galaxy ranges from about 100,000-180,000 light years. It is estimated that the Milky Way has about 100 - 400 billion stars, more than 100 billion planets, including the Solar System and even the oldest stars of the universe.
