

3 newly changed settings of Android P

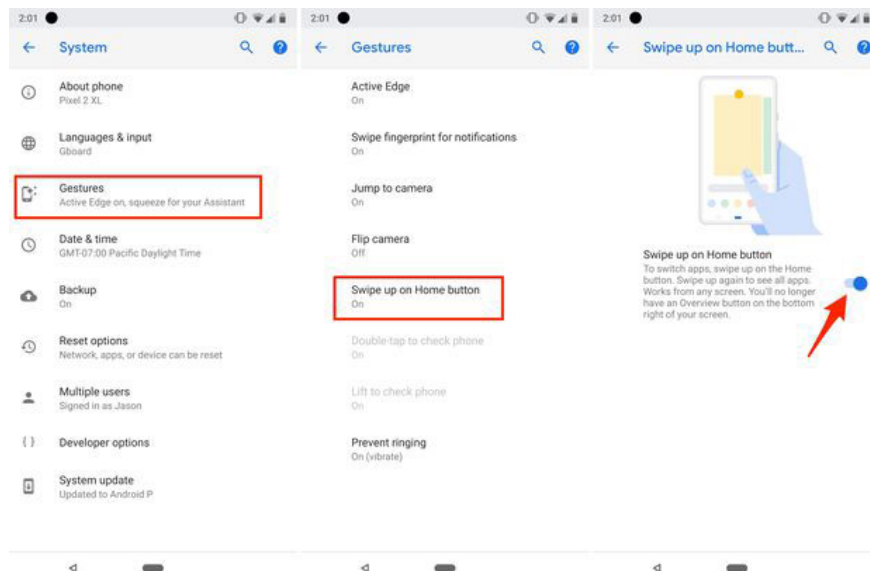

From tools to compatible with an iPhone X, such as smart notifications and a new method to navigate Android, Google's latest mobile operating system has a lot of changes.

From developer tools to compatible rabbit ears like on iPhone X, such as smart notifications and a new way to navigate Android, Google's latest mobile operating system has There are many changes.

There is even a trial beta. But be warned that to return to Android Oreo, you will need to completely delete everything on your phone.

If you're brave enough to try it out, there are three settings that need to be checked after running Android P on your phone.

Gestures

With Android P, users have the option of removing the traditional three-button navigation method and replacing it with gestures.

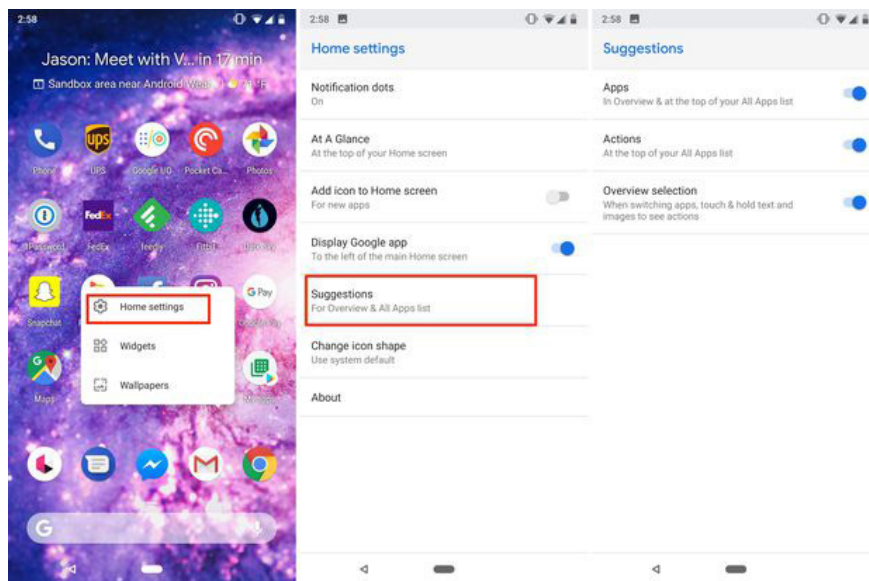

If you decide to try the Android P beta, you may be disappointed to see this feature not enabled when first started. Instead, you must manually install and enable this feature.

Open the Settings application, then go to **System> Gestures> Swipe up on the Home button** . On the following screen, turn on the Swipe up on Home button.

From now on, you can swipe up on the Home button to view your recently used apps, swipe right to quickly switch between two apps or slowly move the Home button to scroll through all applications. Your recent use.

To return to the home screen instead of viewing recent applications, tap the Home button.

Action suggestions

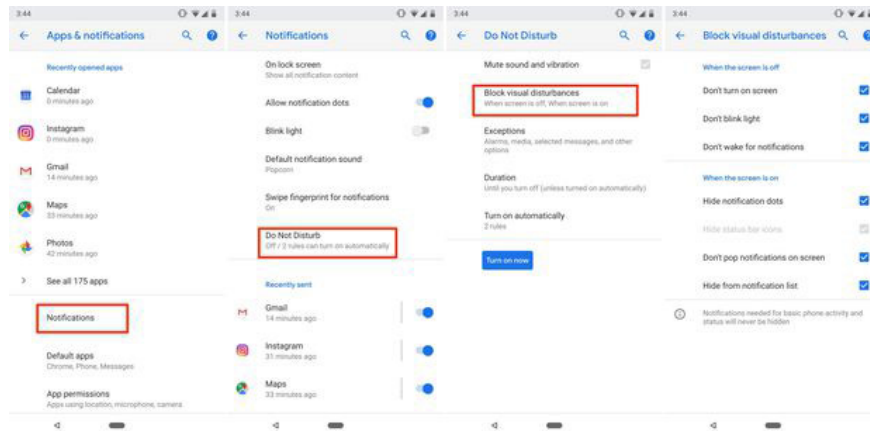

Android P is becoming smarter and will start recommending applications and actions for you to perform throughout the interface. For example, when you swipe up on the new Home button (of course with **Gestures** already enabled), a yearly app will appear at the bottom of the screen. These applications are suggested based on recent regular use.

You will also see action buttons in the application trays for common tasks, such as opening an application to a specific section or starting composing a text message.

If you don't like these new features, you can turn off one or all of those features.

Press and hold your wallpaper, then press **Home Settings** . On the **Home Settings** page , select **Suggestions** . Move the adjustment button to the 'Off' position for applications, tasks and the ability to select the text in the app preview in recent view.

Do Not Disturb

Part of Google's plan to increase user satisfaction helps minimize distractions, making users return to using their phones as an enhanced Do Not Disturb feature on Android P.

Using Do Not Disturb on Android P will not only block calls and notifications when the phone is in standby mode, but also block the screen from turning on. Google is referring to the new feature " **Visual Disturbances** ".

Settings include blocking the notification light, turning on the screen and preventing the phone from displaying new notifications when the screen is off.

When the screen turns on, the settings include hiding notification dots, the notification block appears and hiding the notification list.

You can adjust the new Do not Disturb settings to work by going to **Settings> Apps & Notifications> Notifications> Do Not Disturb> Block Visual Disturbances** .
