

# 3 reasons you should use PirateBrowser browser

PirateBrowser is a browser configured to avoid censorship, block areas, but should you use it?

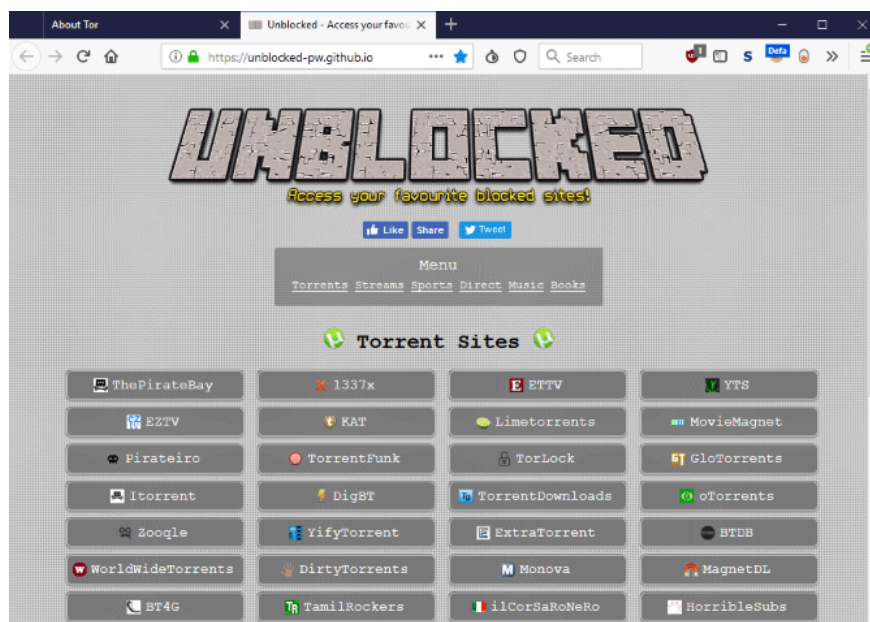

Are you looking for a way to bypass regional blocking or avoid censorship? Although the best way is to use VPN or proxy, some people prefer to use browsers configured to avoid censorship. The PirateBrowser and its alternatives, PirateSnoop, are two such options. But should you use them?

## The reason to use PirateBrowser browser

3. The reasons to use PirateBrowser browser
  1. 1. Avoid Internet censorship
  2. 2. Unblock the area
  3. 3. Find cheaper goods, hotels and flights
4. PirateBrowser browser is not anonymous

## What is PirateBrowser?

First released in 2013, PirateBrowser is a web browser developed by Pirate Bay website. This popular file-sharing site has created a browser to help members find websites after being banned. Basically, it helps users to bypass Internet censorship.

PirateBrowser is a version of Mozilla Firefox with add-on FoxyProxy. It also incorporates Tor (using Vidalia), which helps to censor censorship. You can access blocked sites in countries across the European Union, Iran and North Korea with the PirateBrowser browser. In addition, websites that are blocked or limited by Internet service providers will be unlocked by this browser.

The second browser, PirateSnoop has also been released. It works similar to the PirateBrowser browser but is based on Chrome, not Firefox.

## Is access to the Pirate Bay illegal?

Pirate Bay is blocked in many countries around the world, especially in the European Union. This is mainly because the site's founders are less aware of copyright law. Accessing the Pirate Bay website does not mean that you are violating the law unless you download illegal torrent files.

You don't need to worry about accessing the Pirate Bay site using the PirateBrowser browser. The download link on the page will direct you to a third-party website and it is perfectly legal to use the browser.

Pirate Bay is not a great option for legal or illegal torrent files. If you want to download torrent safely, choose some safe and free torrent sites.

However, you will find that PirateBrowser or PirateSnoop has some surprisingly legitimate uses. If using a Tor-based browser you can even save a certain amount of money.

## The reasons to use PirateBrowser browser

### 1. Avoid Internet censorship

If you're looking to avoid censorship, PirateBrowser and PirateSnoop are the tools you should install. If you live in restricted areas, you can use this browser to access the Internet to find out what information is blocked.

With this free browser-free browser, information barriers can be broken immediately.

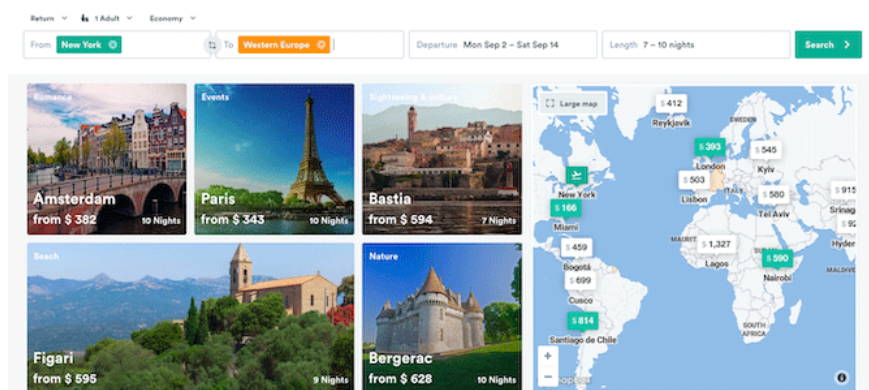

## 2. Unblock the area

Another good reason to use PirateBrowser or PirateSnoop is to enjoy geotagged video streaming services.

Geographical blocking (also known as area blocking) is the act of restricting access to location-based video streaming services. For example, Netflix subscribers in the UK have fewer service libraries than those in the United States. Therefore, some people use tools to bypass this area to access Netflix US.

Netflix blocks access to their services for a number of countries, in particular because of the way payers pay for actors and film crews. Viewers who subscribe to the service rarely care about rights issues like this.

## 3. Find cheaper goods, hotels and flights

Online stores will price their services based on where you live. With a tool like PirateBrowser, you can access websites that sell technology and other items and get different prices. If you're lucky you'll get significantly lower rates offered in your regular browser.

This is a commonly used trick with VPN. You will find cheaper flights and hotels by visiting another version of the regular website. For example, you can live in country A and make a reservation from country B to save.

Although this option is not available in the PirateBrowser, it can save you a certain amount of money.

## PirateBrowser browser is not anonymous

If you want to use PirateBrowser to avoid censorship, avoid blocking areas or get better prices, you can do it with this browser or you can even find some other uses but don't include incognito.

The websites you visit can still identify your identity. Your Internet service provider may also know your actions. Although this is not a problem in the UK or the US, it may lead to a "questioning" from security services in Iran or North Korea.

In short, if you're looking for anonymity, PirateBrowser and PirateSnoop are not the solution you should use.

This is the proxy avoidance and Tor technology used in the PirateBrowser, which does not provide encryption. Only new encryption can provide anonymity easily on the Internet, so if privacy and security are important to you, check out the list of the best VPNs.

You can expect from this browser to basically give you access to blocked websites, avoid censorship and get bargains from cheaper services. And one thing to remember is that it is not anonymous, it simply has the ability to hinder ISPs from blocking certain websites.
