

4 basic notes for using water purifiers more efficiently

It is a familiar device and is widely used everywhere. But not everyone knows 4 simple tips to help water purifiers work more efficiently below. Consult the article immediately to apply it to your home water purifier.

It is a familiar device and is widely used everywhere. But not everyone knows 4 simple tips to help water purifiers work more efficiently below. Consult the article immediately to apply it to your home water purifier.

I. 4 simple tips for more efficient water purifiers

1. Use oxide stone pillars if the water source is heavily polluted

No matter how much or less, the water supply contains bacteria and dirty impurities. If the water is heavily polluted for a long time, it will accumulate bacteria in the filter core, reducing the life of the core.

The use of oxide rock pillars will help reduce the pollution level of water sources, thereby improving the efficiency of water purifiers, ensuring your family's health.

2. Replace the filter cartridge periodically according to manufacturer's recommendations

The replacement of regular filters according to regulations is extremely necessary. If the water filter cores are not changed periodically, the quality of the output water will no longer be safe for health.

As recommended by water purifier experts, if using overdue water filter cores, water after treatment through water purifiers is more dangerous than untreated water.

The reason is that for a long time the filter loses its ability to kill bacteria, bacteria will accumulate in the filter core, when using this bacterium, it will follow the water out. In addition the water filter core will lose the ability to create minerals and water will no longer have the essential minerals for your body.

Here is the time to replace the filter of some water purifier manufacturers you can refer to:

Time to replace the filter of water filter Karofi:

Name of filter core Time to replace 5 Micron PP core 3 - 6 months / time (After filtering 18,000 liters of water)
Core OCB-GAC, Cation, PP 1 Micron, CTO-GAC every 6-9 months (After filtering 10,000 liters of water)
Membrane RO 18 - 24 months / time RO Aqualast membrane filter 24 - 36 months / time T33-GAC, ORP
Alkaline core, rock mineral, Nano Silver every 12 months (After filtering about 10,000 liters of water) Infrared
infrared far infrared core 24 months / time (After filtering about 20,000 liters of water)

Time to replace Kangaroo water purifiers:

Filter core name Replacing Core filter No. 1 3 months / 1 time (After filtering 18,000 liters of water) Filter core
No. 2 every 6 months (After filtering 27,000 liters of water) Filter core No. 3 9 months / 1 times (After filtering
36,000 liters of water) Core filter number 4 - 3 years (After filtering 36,000 liters of water) Filter core No. 5, 6
18 months (After filtering about 72,000 liters of water) Filter core No. 7 24 Month (After filtering 72,000 liters
of water) Filter core No. 8 12 months (After filtering 36,000 liters of water)

Time to replace Sunhouse water purifiers:

Filter name Core replacement time Filter number 1 3 - 6 months / 1 time (After filtering 18,000 liters of water)
Core filter number 2 3 - 9 months / 1 time (Optional) Core filter number 3 9 - 12 months / 1 time (After filtering
36,000 liters of water) The filter core is 4 - 3 years (After filtering 90,000 liters of water) The filter core is 5 - 1.5
years (After filtering about 52,000 liters of water) Core filter numbers 6, 7, 8, 9, 10 1 - 1.5 years (After filtering
about 52,000 liters of water)

3. Discharge the water first before use (For water purifiers that have just been purchased)

When you first discharge, you may see dark brown residue and coal dust in the water generated during the process of passing through the filter made from durable activated carbon. The water after passing through here will create a color washout and tiny particles on the material that completely clean the filter material.

From the following filters, you will never see the water again.

Therefore, after installing the filter, the manufacturer recommends that you flush 4 - 5 times the first water to drink to stabilize the water quality.

In addition to ensuring that after a long time if not using the device, you should also discharge a few times before you want to use it again.

4. It is recommended to replace the water after replacing the filter core

After replacing the filter core, you should conduct water exchange to ensure uninfected operation, as well as avoid causing water blockage when used.

Above are 4 pretty simple tips but it will help your family's water purifier work more efficiently. You can also refer to some of the following water purifier models if you intend to buy or replace a new filter for your family:

II. Top most popular water purifiers today

1. Sunhouse SHR76210CK 10-core RO water purifier - Reference price: VND 6,380,000

Sunhouse SHR76210CK RO water purifier operates with filter capacity up to 10 - 15 liters / hour and is integrated with hot water faucet and utility cold water faucet. So Sunhouse SHR76210CK 10-core RO water purifier will be the first choice of every family.

The Sunhouse SHR76210CK has a compact dimensions of 430mm x 330mm x 900mm with a luxurious, eye-catching appearance with a toughened glass surface attached to motifs that adds to the aesthetic and comfort of your home space.

Specifications:

1. Warranty: 24 months
2. Brand: Korea
3. Shell material: Tempered glass
4. Filter capacity: 10 - 15 liters / hour

2. FujiE RO-08 intelligent RO water purifier (8 filter levels) - Reference price: VND 2,950,000

FujiE RO-08 intelligent RO water purifier (8 filter levels) meets almost all features of purifying water and adding water-beneficial functions.

The water through the filter system of FujiE RO-08 water purifier is completely pure and can be taken immediately without boiling very conveniently. The machine brings clean water to ensure safety for the health of the whole family.

Specifications:

1. Warranty: 24 months
2. Brand: Japan
3. Power consumption: 24W / h
4. Capacity: 10 liters

3. Joyoung faucet water filter JYW-T01 - Reference price: VND 459,000

Joyoung water purifier JYW-T01 is a genuine product of the famous Joyoung brand that provides the best quality filter. The JYW-T01 product is a water purifier that plugs directly at the tap, has a compact design that is suitable for most types of taps on the market today. Thanks to that, clean water is available to you at any time.

With filtering and unfiltered mode, you can easily adjust when you want to use water for living (drinking, washing vegetables, fruits .), or for washing dishes, cleaning with unfiltered water, both convenient and convenient at any time.

Specifications:

1. Warranty: 24 months
2. Brand: Singapore
3. Water filter: Tap water

If you want to own these genuine water purifiers, please contact us immediately for advice and best service:

1. In Hanoi: 024.35.68.69.69
2. In HCMC: 028.38.33.33.66
