

# 4 best sound improvement apps for Android

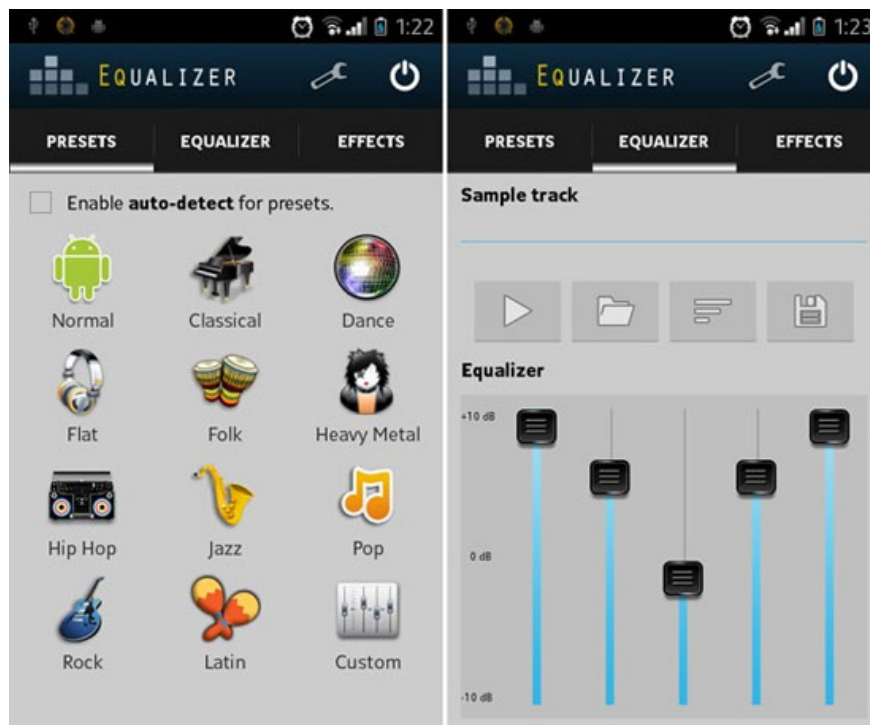

Time also popular coal disc, magnetic tape ... all you have to do when you want to listen to music is to put them in the machine and open the switch. The digital music era makes things a little more complicated if you want the highest sound experience.

**Time also popular coal disc, magnetic tape . all you have to do when you want to listen to music is to put them in the machine and open the switch. The digital music era makes things a little more complicated if you want the highest sound experience.**

If the sound emitted from the phone is not as good as when you hear them elsewhere, you may need applications called ' *equalizer* ' ( *equalizer* ) to optimize the sound waves. Most music applications for Android operating systems have built-in equalizers, but they only work internally within the application.

If you want to find an equalizer that works on the entire phone, try the following names. Note that only 1 equalizer ( *1 application* ) should be used at a time to avoid not *clashing* .

## Equalizer:

**Equalizer** is an easy-to-use, easy-to-use application that helps you quickly improve the sound quality even though you have no experience using these applications. The application has 11 sound settings as well as the ability to increase and decrease bass, treble .

The Equalizer has a feature that automatically detects the type of music you are listening to and adjusts the sound accordingly. Although this feature is not compatible with all music applications on Android, at least it supports big names like Pandora, Google Play Music .

Equalizer is available in 4x1 and 2x1 size widgets for the home screen.

Free Equalizer, an additional \$ 2 you will have a premium version with the ability to save, delete, rename settings, create shortcuts for each sound setting and backup / restore settings to the memory card.

## Music Equalizer:

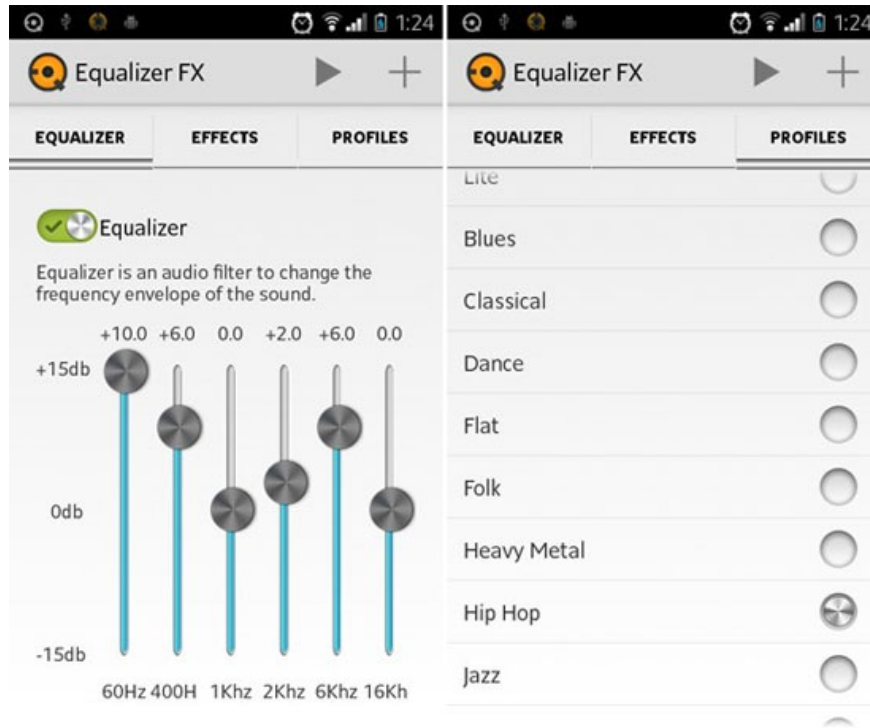

**Music Equalizer** is also an easy-to-use audio equalizer application, which also includes the ability to adjust the volume of the volume ( *this feature is not really necessary unless your phone does not have an increase / decrease key, but yes still more than not* ) . The application has a very simple design, you will see the effect even though the number of frequencies tuned by the application is not much.

Music Equalizer has 9 preset levels, all types of music that you can listen to by hand. Another interesting point is that the application has volume lock feature to avoid unintentional opening too large or too small.

However, you will always be bothered by a small ad strip below.

## Equalizer FX:

**Equalizer FX** looks very similar to Equalizer ( *top of the list* ). The two applications have very similar layout and icons, although they come from 2 different developers.

Equalizer FX is available in 12 settings but does not have the feature to automatically determine the type of music being played. However, the free version of the application allows you to create and save sound settings. In return you will be bothered by advertising, spending 1 USD and ads disappear.

## Music Volume EQ:

This is an application designed to create the most ' *professional* ' feeling, the user interface is like you are adjusting the equalizer in real life. It is also the highest rated app on Play Store ( 52,000 and 4.5 stars ).

There are absolutely no ads though this is a free app. **Music Volume EQ** offers 9 settings, including widgets. You can also create and save custom settings without limitation. The production side said that their application is compatible with Android Music Player, **Winamp** , **Google Music** , **MixZing** , **Poweramp** and many other music programs.

## Conclusion:

The most professional is Music Volume EQ ( *both in design and 'generous' of the developer* ). Easy to use, easy to get used to is Music Equalizer ( *there are a few essential features sometimes needed: small size adjustment, lock* ).
