Instructions for cleaning hot air conditioner at home

Step 1: Disconnect the power supply connected to the air conditioner

You must make sure that the power supply connected to the air conditioner has been turned off for at least 5 minutes, then proceed to clean the heater.

Step 2: Clean around the heater

The said above, because usually hot lumps are usually located on the terrace or balcony, . so you need to pay attention to clean up trees, vines or surrounding objects to keep the hot zone clear in the range at least 60 cm from obstructions. Doing this will help the heat dissipation process on the hot zone work best.

Step 3: Clean the parts of the hot zone

First, spray water on the outside of the hot zone and let it wet for about 10-15 minutes for long-term dirt to absorb water and dissolve. Next, use a screwdriver or a particle controller to remove the cover, the outer panels of the hot air conditioner. You need to remove and clean these areas carefully, otherwise it will affect the heat dissipation as well as damage the inner core.

Step 4: Install air conditioner back to the original position

Complete the above step, let the hot dry, dry and then install the parts again like the original. And finally, turn on the power to check and continue using the air conditioner.

It only takes a few minutes to clean the air conditioner, it will be quieter, stronger and cooler. Refer immediately to how to clean the hot air conditioner above to experience the hot summer easier.
