The preparing automatic repair black screen error is making you worried during your computer experience? Don't worry about anything

The preparing automatic repair black screen error is making you worried during your computer experience? Don't worry about anything because TipsMake has a specific solution for you to fix.

Automatic Repair is a feature built into Windows. This feature will help fix boot-related problems when any problem arises. Usually, this feature works quite smoothly, but that doesn't mean it always works that well. Many users have encountered **the Preparing Automatic Repair black screen error** without knowing what to do. **TipsMake** will help you fix this problem with simple tricks.

Preparing Automatic Repair black screen error and solutions

Before getting to how to fix Preparing Automatic Repair black screen. We need to know what the Preparing Automatic Repair error is. Admin would like to explain again, simply put, Automatic Repair is a feature of the Windows operating system. This feature will help us fix errors that arise during the boot process. And for some reason, the computer will not be able to exit the Automatic Repair loop and continuously reboot. This is when we need to fix the Preparing Automatic Repair error with the solutions below:

It can be divided into two main causes leading to the Preparing Automatic Repair black screen error: hardware and software. Based on these two causes, we will have the following solutions:

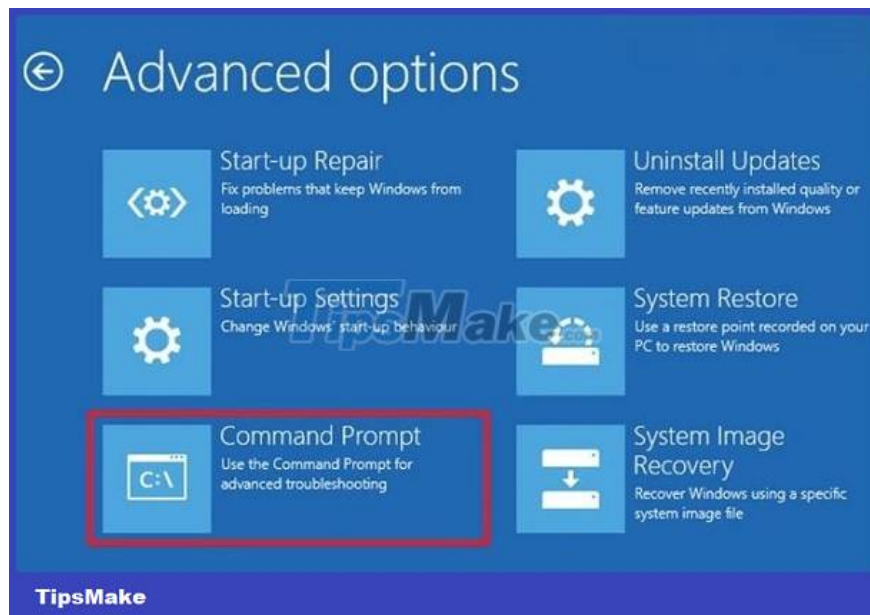

1: Check the computer, turn off the power and restart

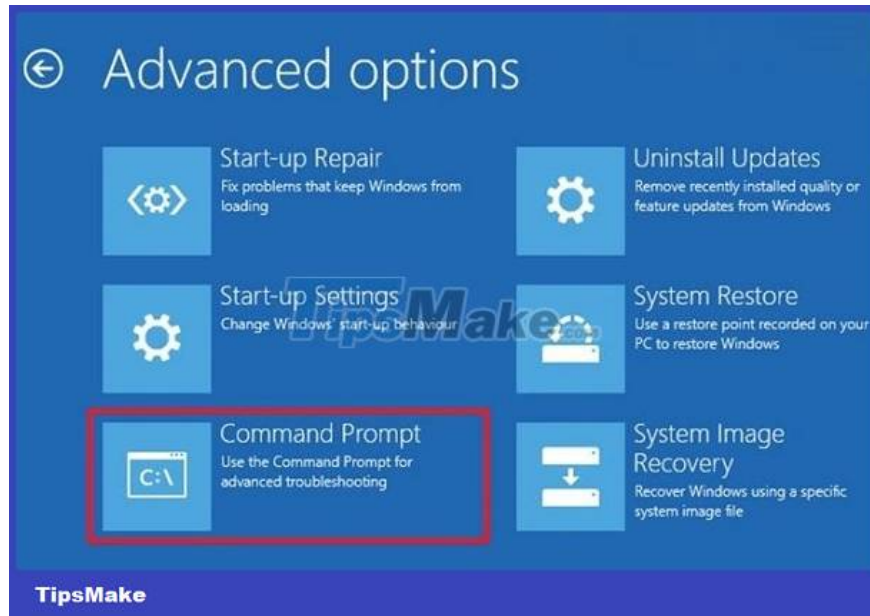

You may not know, a sudden power outage or battery drain can cause your laptop to encounter an Automatic Repair error. Therefore, when you encounter this error, check to see if your laptop is plugged in or not. At the same time, you can also try turning off and restarting the laptop to try to fix this problem.

2: Fix Preparing Automatic Repair Windows 10 error with check disk utility

Using the check disk utility is the most effective solution to fix the Preparing Automatic Repair black screen error. However, this method is quite complicated. Everyone remember to pay careful attention to avoid errors during the implementation process.

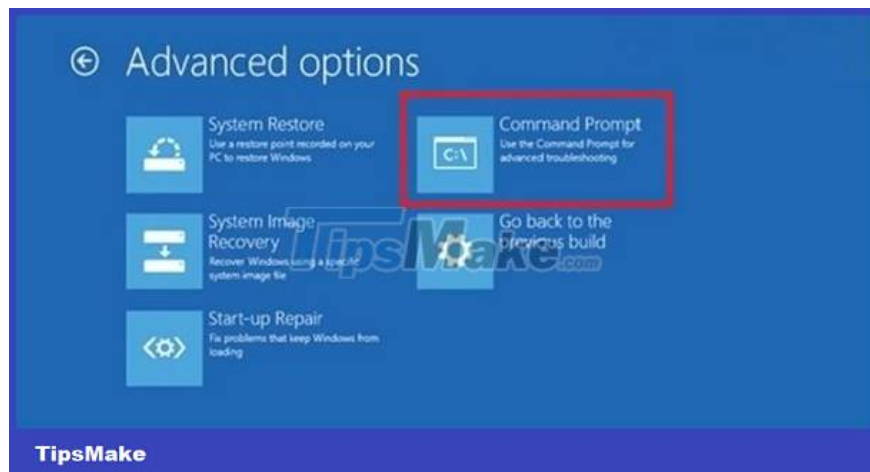

1. **Step 1** : Prepare a USB containing the Windows operating system. After turning off and restarting the computer, connect the USB and boot into it. There are a few laptop models that will automatically **boot into USB** . But if it's not automatic, you can access your device's **bios** to install.
2. **Step 2** : Once the computer has booted into the USB. Please set parameters such as language, time, keyboard and then click **next** . Next select **repair your computer** .
3. **Step 3** : Click on the **troubleshoot, advanced options** and **command prompt** items one by one .
4. **Step 4** : When the new window appears, enter the command line **chkdsk /f /rC:** and press **enter** . Next type the word **exit** and press **enter** again. Now remove the USB and restart your computer to see if it works.

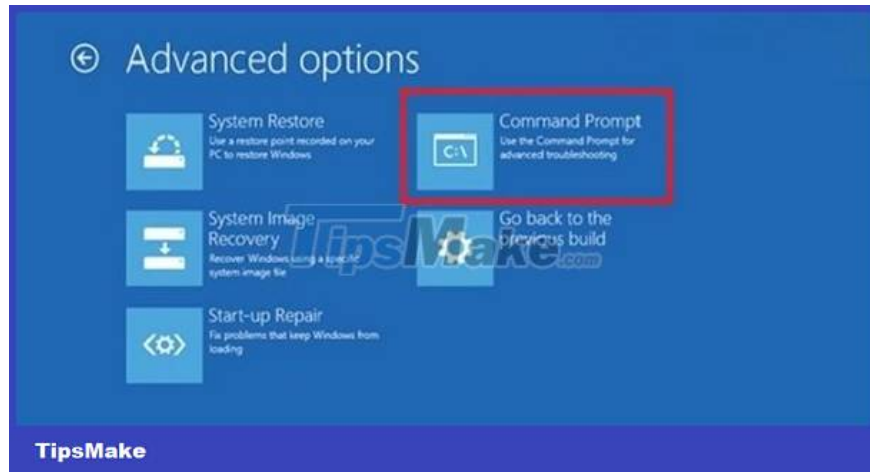

3: Fix Preparing Automatic Repair black screen error using command prompt

To do this, you can do the same steps as the second method above until step 3. When the window appears, enter the command **exe /rebuildBcd** and press enter. Continue typing **exe /Fixmbr** then press **enter** . Continue typing **exe /Fixboot** then press enter. Finally, press exit and then press enter again. Then restart the computer.

4: Install Windows to fix Preparing Automatic Repair errors in Windows 11, 10

Installing Windows is always a quite effective measure to fix unusual errors on laptops. In case with Preparing Automatic Repair error the screen is black. You can also apply this method. If you have experience installing Windows, you can absolutely do it at home. However, if you are not confident in yourself, you can also bring the device to a repair center for support.
