

4 How to update the Driver for computers, laptops best

Updating the new Driver helps your computer to achieve the highest performance. In this article, TipsMake.com would like to show you 4 ways to help you update the driver for the best computer and laptop. Stay tuned to see which are the ways!

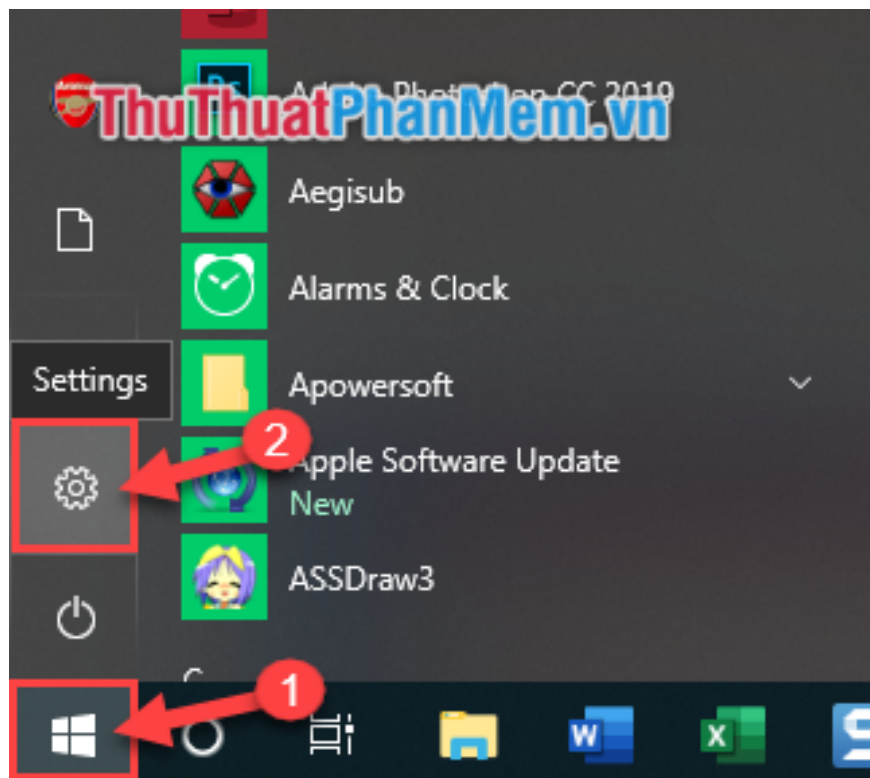

Drivers are a very important part of a computer, it connects computer components together to help them work more smoothly. Updating the new Driver helps your computer to achieve the highest performance. In this article, TipsMake.com would like to show you 4 ways to help you update the driver for the best computer and laptop. Stay tuned to see which are the ways!

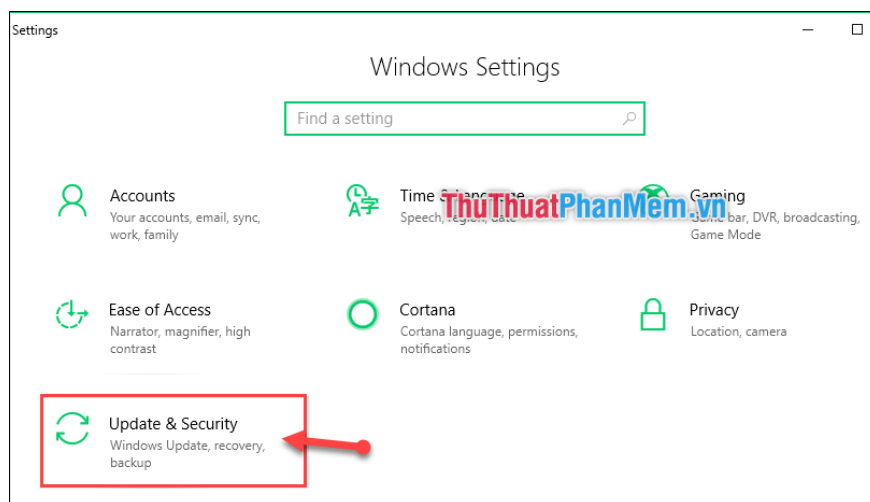

Method 1: Update the Computer Driver through Windows Update

There is nothing better than updating drivers through genuine Microsoft. To perform the driver update through Windows Update we perform the following:

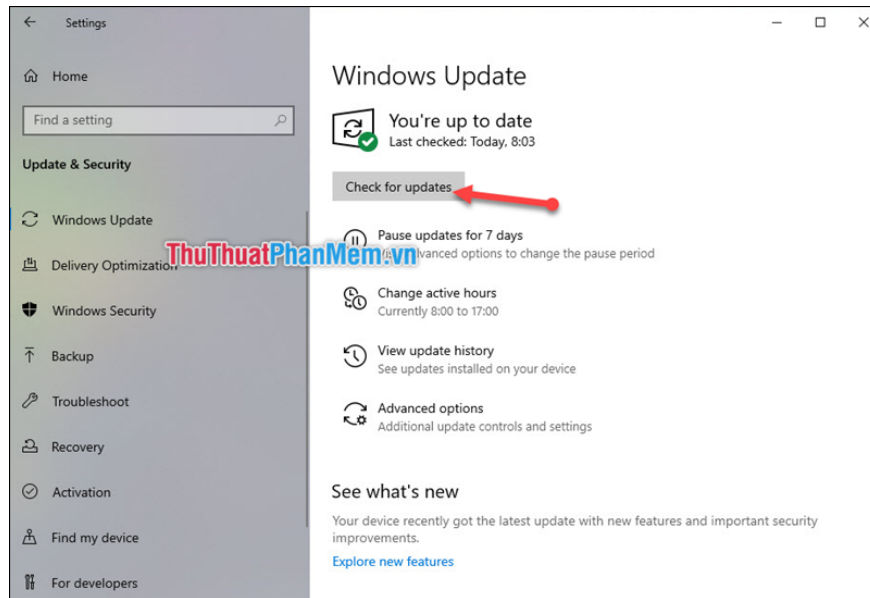

Step 1 : Open the *Start Menu* and select *Settings* .

Step 2 : In the **Settings** window, select **Update & Security** .

Step 3 : Then click on **Check for updates** to check for driver updates.

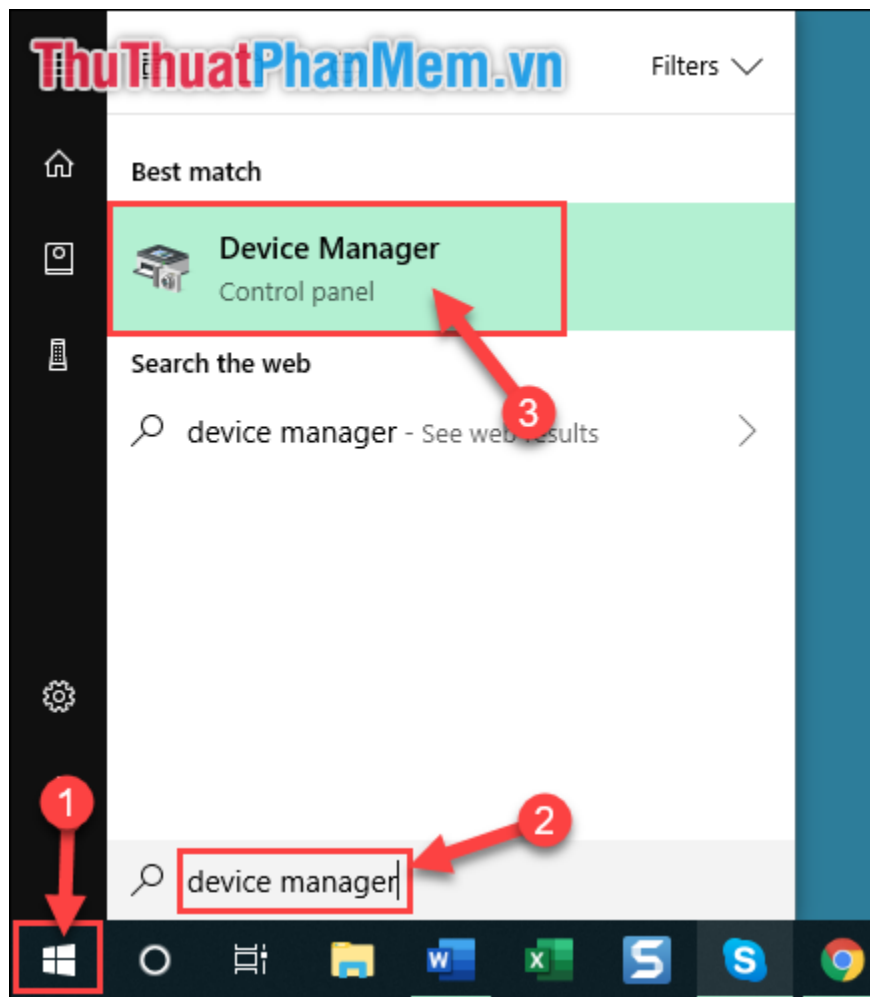

Updates through Windows Update are extremely secure because they are verified by Microsoft. However, only devices manufactured from Microsoft will have the Driver updates. And this way only works on Windows 10 operating system.

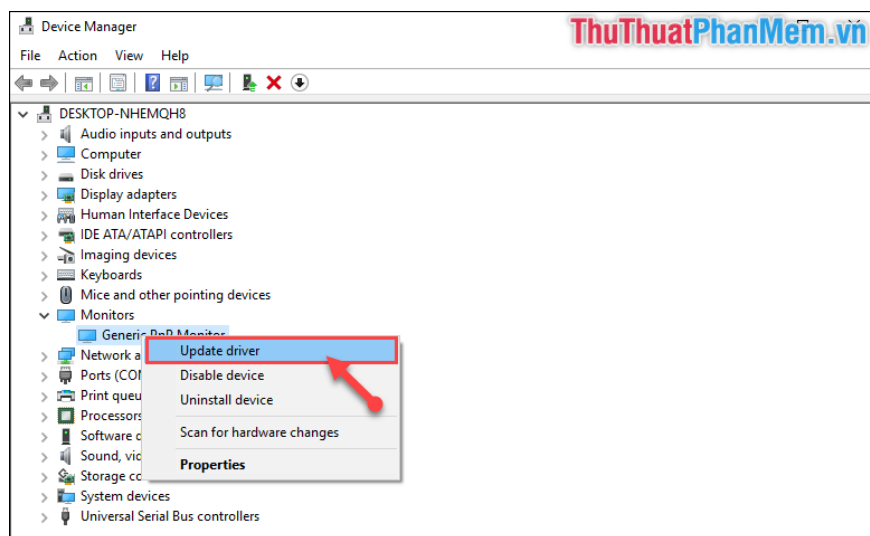

Method 2: Update the Computer Driver via Device Manager

With Device Manager you can update Drivers for peripheral devices such as Printers, Monitors....

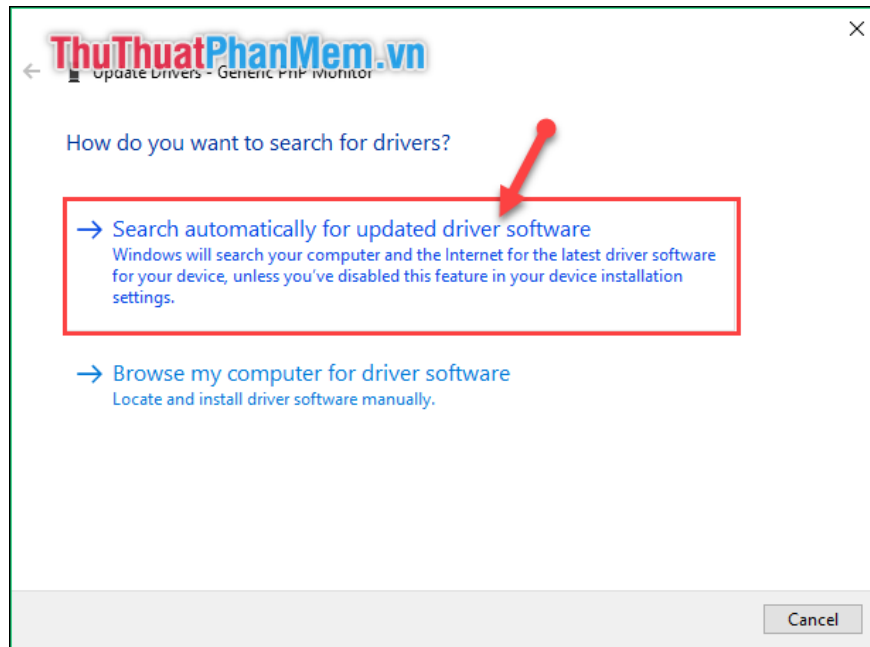

Step 1 : *Go* to the *Start Menu* (1) -> Type search *Device Manager* (2) -> Then open the utility (3) .

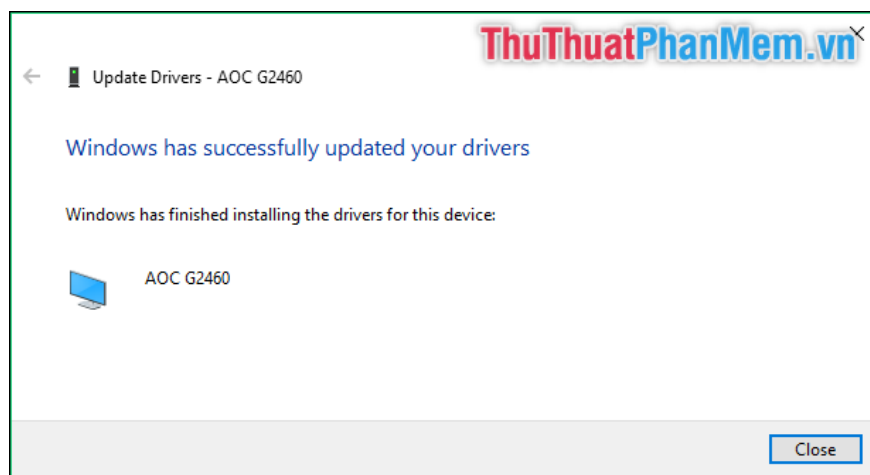

Step 2 : In the **Device Manager** window, select the device that you want to update Driver. Right-click on them and select **Update Driver** .

Step 3 : Click the " **Search Automatically for updated driver software** " section.

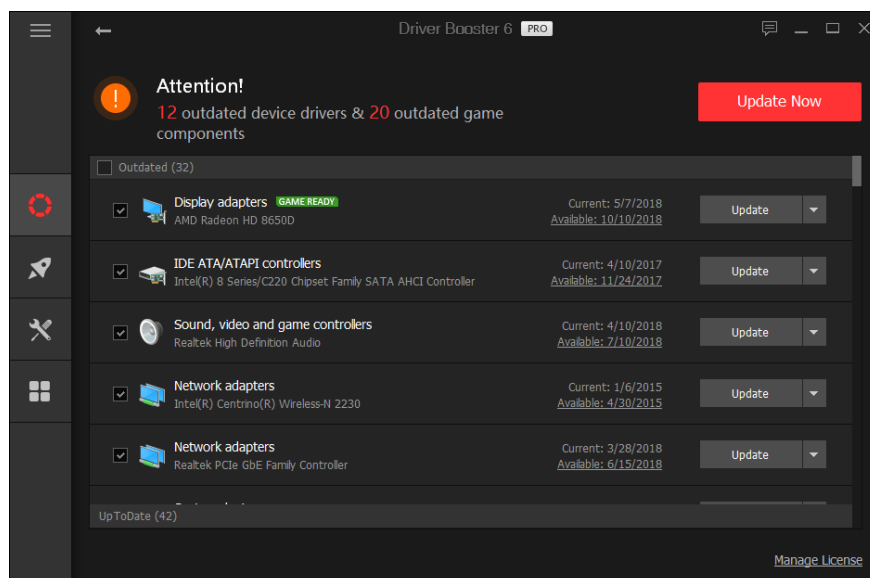

Then if your device has the latest driver updates, they will be updated immediately.

Method 3: Update the computer driver via the 3rd software

The software that TipsMake.com would like to introduce to you here is called **IOBit Driver Booster** .

Link to download and install the software: <https://www.iobit.com/en/driver-booster.php>

Once installed, the software will automatically scan all the Drivers on your device, including the drivers in the system as well as the drivers on the peripheral devices. Then you just need one click on "Update Now" the software will automatically download the latest Driver versions and install them. Your job is just to wait for the software to update and restart your computer to help it work more smoothly.

Method 4: Update the computer driver manually

For technical people who want to find out for themselves the new features of Driver updates, you can visit the device manufacturer's homepage to download the driver updates of each vendor:

- Sony: <https://www.sony.com/electronics/support>
- Acer: <https://www.acer.com/ac/en/VN/content/drivers>
- Dell: <https://www.dell.com/support/home/vn/en/vnbiz1/products/?app=drivers>
- Asus: <https://www.asus.com/support>
- HP: <https://support.hp.com/vn-en>
- Samsung: <https://www.samsung.com/us/support/downloads/>
- Lenovo: <https://support.lenovo.com/en/en/>
- Nvidia: <https://www.nvidia.com/Download/index.aspx>
- Intel: <https://downloadcenter.intel.com/product/80939/Graphics-Drivers>
- AMD: <https://www.amd.com/en/support>

The above are 4 very simple ways that you can update the Driver for your computer to help them operate effectively and smoothly. Hope this article will help you a lot. Thank you for following the article. I wish you successful implementation!
