

4 mobile screen models are worth possession of today

4 choices worth considering, promising to meet the requirements of the most demanding users at different levels of work.

The screen is one of the extremely important positions on today's electronics. This is where users interact primarily with the device, as well as playing a decisive role in the user experience. For this reason, the display quality as well as the support features of the panels are increasingly advanced and richer.

If you are looking to buy a mobile screen for your advanced use, here are 4 very worthwhile options that promise to meet the requirements of the most demanding users. at different levels of work.

UPERFECT 4K Computer Monitor

UPERFECT 4K Computer Monitor

UPERFECT 4K Computer Monitor is a discrete display model that is not cheap, but 'expensive'. The actual value you receive will certainly be worth every penny you spend.

As the name implies, this model possesses 4K Ultra HD resolution, 60Hz with dimensions up to 15.6 inches - essential elements for professional content creators, as well as games Gamers have strict requirements on the quality of the game graphics. In addition, aesthetics are also a factor appreciated on the product. Except for the bottom edge, the three remaining edges of the screen are optimized ultra-thin bezel, giving the front cover ratio up to 95% .The entire screen will be placed in a solid aluminum frame for a feeling. extremely sure.

Due to its large size, UPERFECT 4K Computer Monitor is equipped with a solid intelligent tripod system. When needed, this stand system will be able to act as a 'holster' to help protect the panel, avoiding dirt as well as external forces.

Lenovo ThinkVision M14

Lenovo ThinkVision M14

If you find the price of more than 8 million for a mobile screen that exceeds your financial capacity, you can refer to Lenovo ThinkVision M14. This mobile screen model is one of the efforts to expand the range of ThinkVision products to many different groups of users, especially businesses. ThinkVision M14 has a 14-inch Full HD resolution - more than enough for sharp images, combining IPS panels for wide viewing angles, vivid colors, freshness.

Perhaps the strength of this discrete model lies in its portability with a weight of only 595g and an impressive thickness of 4.4mm. However, it is not rickety or fragile, but sturdy and rugged with a design inspired by the 'legendary' ThinkPad product line.

Another highlight on ThinkVision M14 is the intelligent tripod system, which allows adjusting the angle from -5 to 90 degrees, not inferior to the opening angle of the laptop screen.

ASUS MB168B +

ASUS MB168B +

An option at a relatively affordable price, but still ensure a relatively complete meet the needs of professional use. ASUS MB168B + has a standard size of 15.6 inches and Full HD resolution with a USB 3.0 cable for both data transfer and convenient power. Its smart adjustable built-in stand provides versatile versatility, and can also be used as a screen protector.

In addition, the MB168B + is backward compatible with a laptop or desktop USB 2.0 port, allowing you to experience fast, smooth images with high display quality from connected devices. I made multi-screen setup at anytime and anywhere become a reality with just a few quick steps.

ASUS Zenscreen

ASUS Zenscreen

Another product from the ASUS brand but in the high-end segment. ASUS Zenscreen is a high-quality mobile screen model, finished from solid aluminum with 16-inch size, Full HD resolution and 60Hz refresh rate for

excellent color reproduction from any angle. IPS technology.

Although not owned 4K resolution, but in return ASUS Zenscreen is equipped with many advanced features. For example, this model has a built-in speaker, a very useful equipment to turn it into a true independent entertainment screen. Besides, the integrated battery is also a very valuable equipment, giving the ability to use a lot more flexible.

On top of that, ASUS Zenscreen has touch support, meaning you don't need a keyboard or mouse to use it. It is also the world's first portable monitor with a hybrid signal solution, meaning it only needs a single USB connection cable to be fully compatible with most laptops. With an ultra-thin 8mm bezel and weighing only 780g, it's easy to carry around.

The premium case included with the Asus Smart Case can not only help protect the screen from dirt and external forces, but also act as an adjustable 3-way stand, so you can use it for maximum Superiority on all work surfaces.
