1. Are there ways to turn on the air conditioner before going home?

Use the timer function

Most of the remote control of air conditioners now have a set of timer control buttons with Timer. In it, the On Timer button allows you to set the timer to turn on the device, and the Off Timer button allows to schedule a shutdown. Using this feature, you can find the Set / Cancel button to set the timer mode and two up and down arrow buttons to adjust the desired time. When the installation is complete, the time frame will appear on the display panel.

If you want this feature to work properly, you need to be aware that the installation time for the air conditioner must be accurate. Some air conditioners also have the ability to turn on and turn off the computer automatically. At that time, the screen will show both the notification time on and off or vice versa.

Use automatic clock switch

Switch Switch - Timer is known as a device that helps control the use of electricity over time, it is like an extra clock. Using this automatic clock switch you can turn on and off everything at your disposal, use it for many purposes such as lighting, water supply, . and including air conditioning timer.

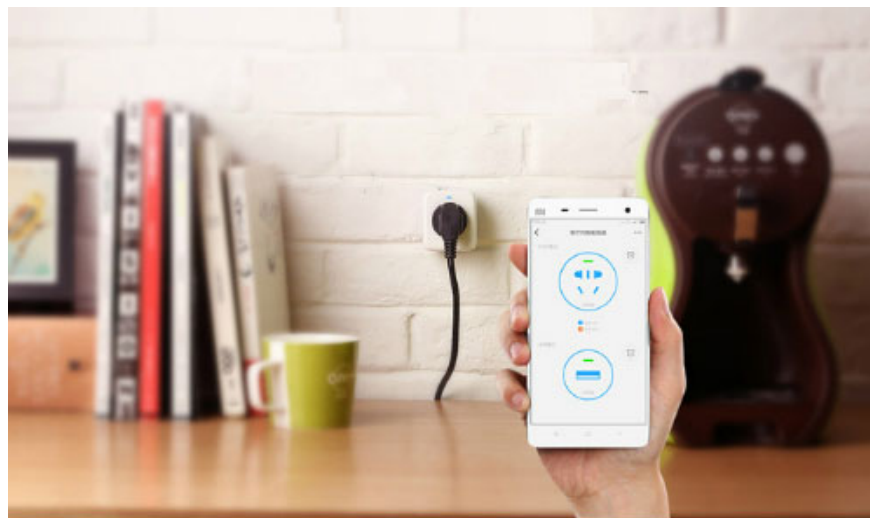

It works on a combination of clock and switch to automatically turn off or turn on the power at the specified time. The device is usually attached to light panels, electrical cabinets and controls electricity 24 hours a week or weekly. For example, you can set the time to turn on the air conditioner from 18:00 to 20:00 when you come home from work and dinner. Then turn off from 20:00 to 23:00 when the whole family goes out and turns on

while sleeping from 23:00 to 5:00 the next morning.

Use smart electric drive

The two ways to turn on the air conditioner before returning home have been quite effective, but their disadvantages are that they cannot intervene or change remotely. Thus, if you do not return home at the time of the previous timer, the machine will still automatically operate cooling, wasting power.

Fix this case, you can find smart power outlet. These are pluggable Wi-Fi sockets, making it easy to connect and control devices via the phone application. Specifically, you will be allowed to turn on and off the device remotely or to schedule toggle the air conditioner, even to manage and control parameters such as temperature, current intensity, voltage, .

Using smart air conditioner with Wi-Fi connection, remote control by phone

On the market today, some modern air conditioner lines of Samsung, Gree, LG, . have been able to connect smartly with mobile devices via Wi-Fi. This means you can control the air conditioner by phone through the application to turn on, turn off, timer, increase or decrease the temperature, adjust the wind direction, . whether in the room or away from kilometers. . The application also allows checking errors and notifying users.

It's great when you want to use air conditioning before going home. Just open the phone and press the button, coming home is a cold room waiting for you. You can refer to Top 4 air-conditioners with Wi-Fi, remote control by smartphone and choose the right one for your family.

2. Do you really need to turn on the air conditioner before entering the house?

Four ways to turn on the air conditioner above are quite useful, but the current air conditioner models are capable of quick cooling, averaging about 5-10 minutes depending on the room space. Therefore, you do not need to wait too long to enjoy the coolness of the atmosphere brought by the air conditioner.

Furthermore, when you turn on the device beforehand, you may have a thermal shock due to the high temperature difference between the outside and inside the house. This will adversely affect health, even pose a particular danger to children or older adults. The most reasonable measure to reduce heat is to quickly drink

water, turn on the light fan while waiting for the room temperature to decrease from the air conditioner. Therefore, you should consider whether to turn on the air conditioner before going home!
