

4 ways to uninstall apps for Android devices

Are you installing too many software on your beloved Android phone without needing to use them? Storing these unused applications both consumes memory and sometimes even drains the battery due to applications running in the background.

Are you installing too many software on your beloved Android phone without needing to use them? Storing these unused applications both consumes memory and sometimes drains the battery due to applications running in the background. You should immediately remove the application on Android when you no longer need it and this article will guide you on how to uninstall the Android application quickly and simply.

Ways to remove Android application

Method 1: Uninstall the application from the Android home screen

For devices using Android 4.0 and above, you can remove the application quickly by long pressing on the icon of the application to delete.

You wait until the trash icon appears in the corner of the screen and then drag the program to delete at this button location.

A dialog box will appear asking you to confirm the uninstallation of the application, select **OK** so that the uninstall process starts.

Delete the application by dragging and dropping into the trash

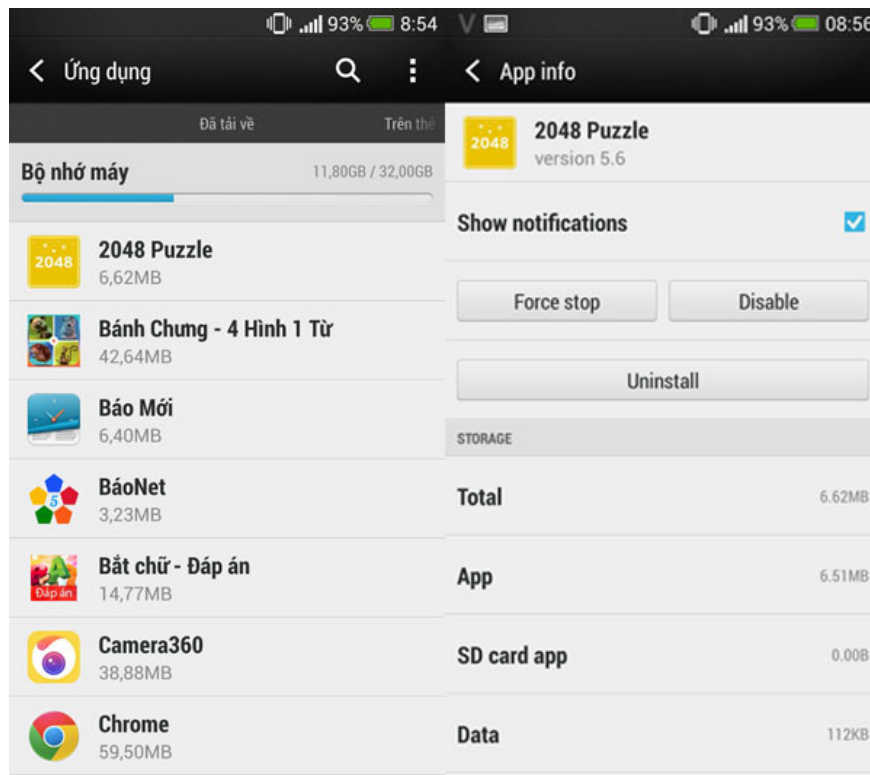

On Android 8.0, the uninstall option will appear right at the top of the application, not on the top of the screen, you just need to click **Uninstall** is okay.

Method 2: Uninstall the application from Settings / Settings

The second way is a bit more complicated, using the device's **Settings / Settings** to remove unnecessary applications.

First go to **Settings / Settings** and select the **Application / Applications** tab, continue to select **Manage applications** . Then find the application to uninstall, click it and select **Uninstall** or **Uninstall** .

For some software that has data storage and cache buffers on the memory card, you can remove it completely with **Android System Cleaner** and finally **Uninstall** .

Find and delete apps in the Settings menu

Method 3: Remove the application in Google Play

The last and often used way for devices running Android old versions is to use the built-in **Google Play** .

Before using this feature, you need to make sure that the application is completely closed before proceeding to uninstall.

To delete the app, open **Google Play**, click on the 3 dashes icon in the upper left hand corner > My apps and games / My apps (or My apps on the top right for tablet). Select the Installed > tab here, select the application you want to delete, Google Play will give you 2 Uninstall and Open options. Please select Uninstall to remove the application from the device.

Remove applications with management functions in Google Play

Then select the software to uninstall and click **Uninstall** .

Method 4: Remove the application with another application

Besides using the default Android app uninstaller, you can install some specialized uninstaller software for Android like: Clean Master, CCleaner, Uninstaller.

1. Download Clean Master for Android
2. Download Uninstaller for Android
3. Download CCleaner for Android

With these simple ways, your mobile phone will always work optimally and most effectively when you always "care" for it. Good luck!
