One of the most talked about netizens' phrases today is certainly Google Plus - the search engine's competitive and groundbreaking product that leaps into Google in the battle for the social networking market. Opposing rival Facebook ...

**TipsMake.com - One of the most talked about online community phrases today is definitely Google Plus - the company's competitive and groundbreaking product in the battle for market grab. Social network with rival rival Facebook.** Even Google has limited the number of invited users after the test just now, but there are still thousands of new users registering every day, surely we have somewhat visualized the invisible 'attraction' of **Google+**. in this virtual world. However, most of us are new to **Google Plus**, so it is certainly impossible to know and make the most of the capabilities and utilities of this service, in the article below, we will introduce and teach you how to exploit and use **Google+** in a way that is reasonable and effective through a list of 40 tips to know.

## Part 1: Stream

1. One of the most commonly used ways to increase performance is to use a shortcut key combination. In your **Stream** section, press the **J** or **K** keys to move between posts, press **Enter** to use the comment function (press **Tab** then **Enter** to post a comment, press **Tab** twice and **Enter** to cancel the process) , or press **Q** to switch to the **Google+** chat box .
2. These shortcuts also work in drop-down menus: press **J** or **K** to move up and down in the list, press **Enter** to open any message. While viewing this piece of information, press the **J** or **K** keys to move back and forth between these components. Press the **Esc** key to close all these warning windows.
3. Do you want to use more shortcuts? Refer to the G + Extended utility for **Chrome** browser, which will assign more options, including shortcuts for **+1 posts** , sharing and extensions.
4. If the comments are out of control 'in your **Stream** section, use the + Comment Chrome utility, which collapses all comment posts, and users can only see when extend. Another support utility is G + me Google+, by default this tool will expand comments, but provide users with the option to close any topic or comment with just 1 action. Besides, there is a useful counter to help you easily manage and monitor the work in progress.
5. You can specify an entire element in the **Stream** system by pressing the button with the small arrow icon next to it, then select the **Mute this post**. This feature allows it to prevent receiving similar alerts about this component in the future.
6. On your own post, the same function will help you close the comment and prevent others from sharing it. However, this feature only works on selected objects and components.
7. Sometimes, leaving comments on the article is quite difficult, because the **Download Stream** function above the browser is always in active mode. To solve this problem, you press the button with the arrow icon next to the currently browsing post and select **Link to this post** - this process will open a post on a new tab of the browser, you just need to enter Comment content and close the tab when done.
8. **Google+** supports users to format content and typefaces right in posts and comments. For example, to write italic, we type the following: ***\_like this\_*** , to write bold, it looks like this: ***\* like this \**** , and the dash is like this: ***- like this-***
9. Change the look of **Google+** to be more eye-catching with the **Chrome** Ultimate utility for **Chrome** browser, this tool works to separate the posts by the box with the background, while changing the status bar left to the fixed position when user scrolls. In addition, you can consult and use the Usability Boost support tool - a little change on the external interface of **Google Plus**.
10. Function mentioned - **Mention** or often called **tag** a certain account in the article or comment by pressing the + or @ key behind their name, but **Google+** works relatively wrong at this step later that will display the results corresponding to the keyword. If not, try entering the account name in quotes, for example + **"Bob Sacamano"**
11. Improve Google+'s feedback feature by using the More Google+ Chrome extension for **Chrome** browser - with the ability to place links throughout **Google Plus** , allowing users to reply to any article or any comment with just one operation.
12. To start a private conversation with one or more friends, we just need to share the **Update** mode as usual, but make sure you have removed the **Public** or any **Circle** section from the **Share** section. Then, tag your friend account by pressing the + button (as mentioned above). They will receive notifications about messages, and we

can continue conversations right in that comment section of the article. If you want absolute security, turn off the **Share** feature as in **step 6**.

13. 'Speed ??up' for **Google+ Stream** with the extension + Photo Zoom Chrome for **Chrome** browser. After installation, we just need to hover over any image in the **Stream** section, the system will display the image with a larger size right there.

14. Besides, the **Google+ Mobile** app allows us to view posts from people or accounts in the respective geographic area (using the nearby option).

15. The **Google+ Mobile** app also adds some hidden features such as: while watching **Stream**, select the menu and **Manage Views**, then turn off all familiar **Circle** and click **Done**. From here, we were able to move straight from the main **Stream** through separate **Circle**.

---

## Part 2: Circle

16. Use **Google+** to save important posts and content. Open the **Circle** page and search for your main name, then assign yourself a new **Circle**, name it **Saved** or whatever. After that, at any time you see a change in the **Google+ Stream** to save, just share it with the same account (**Circle Save**).

17. If you use a tool that supports making notes like **Evernote**, you can save the content directly from **Google+** to your computer. First, we need to find the real Evernote email address, assign it to the **Google+ Circle**, with the name **Evernote**. And from this point on, when a user wants to save anything from **Google+** to **Evernote**, just share it with **Circle**. Then **Google+** will send the content via email.

18. Do you want certain **circles** to show higher than the other parts in the **Stream** list? The **Circle** sections with names beginning with spaces (eg **.Save**) will always show above, followed by the \* character, as **\* Important**

19. The **Circle** of **Google+** in default mode will always show on all other components. To apply, create a new **Circle** instead of the default part (eg **My Acquaintances** replaces **Acquaintances**), but make sure to move your friends or partner accounts from the old **Circle** to the new one., and finally delete the default **Circle**.

20. When moving accounts to the **Google+ Circles** page, press **Ctrl** or **Shift** to select multiple components, or create a new one, then move a series of accounts with just one operation.

21. To copy the entire **Circle** into another **Circle**, select the first **Circle** section and click **View circle in tab> More actions> Select all**, all that remains is to drag the whole **circle to the new Circle**.

22. Change the **appearance** of the **Circle** page by selecting and dragging the alignment line up, down, or between the **Circle** section and the accounts, which will help us create more space.

23. If you want to communicate with multiple people at the same time on **Circle** , press **Ctrl** and the key - several times to minimize the content inside the browser, press **Ctrl + 0** to switch back to normal mode.
24. From the **Circle** page, double-click any account to go straight to their **Profile** page.
25. Also on the **Circle** page, scroll over the **Circle** with at least 30 accounts, then roll the mouse with its own function button, the faces in it will move like a conveyor belt.

## Part 3: People and Profile accounts

26. Search for new **People** by searching in the topics or locations in the **Search** box at the top of the **Google+** page, the results returned will include all the information related to the keywords you just provided.
27. Search **Google+** via **Google** using **site: plus.google.com** after your keyword phrase, but if you want to find the exact article you just posted or shared, use the **site: plus.google.com / [Google ID of you]**
28. If you want to learn more, you can create special commands to search **Google+** right inside the **Chrome** browser, open the **Manage search engines** section in the settings section and add 1 **Entry** to it. name is the **Google+ Posts**, put the keyword post and the path is "**{google: baseURL} search? q = site: plus.google.com inurl: posts / \*% s.**". Then add another **Entry** with profile name and path: "**{google: baseURL} search? Q =% s & tbs = prfl: e.**". From this point, when you want to find posts on **Google+** , just type the word post behind the required keyword, and with **Google + Profile** , type the **profile** after the keyword string.
29. 'Decoration' adds the **Profile** page with a row of images at the top of the page, press the **Edit Profile** button and select the space between the name and description. You can refer to some sample examples here.
30. On the other hand, users can edit photos directly inside **Google+** , open any photo in the **Profile** 's **Photos** tab, then select drop-down menu - down **Actions> Edit photo** . Here, we will have a lot of choices in color, contrast mode as well as some other special effects.
31. All photos in **Google+** are stored in **Picasa** , users can view and share directly from Google's **Picasa** management page.

32. Besides, **Google+** can easily customize your **Profile** for everyone, by opening the **Profile and privacy** section of **Settings** , then enter the name of any account in the "**See how you profile nh? là các ng??i dùng khác.** " , click **Preview** , and we'll see our **Profile** through other people's eyes.

---

## Part 4: Google+ and the web

33. Get a fixed path from any **Google+** post by clicking the corresponding time section. If the article has been shared under **Public** mode, the path will work with anyone, even if they are not logged into the **Google Plus** service .

34. Extending the sharing options of **Google+** with the Extended Share utility for **Chrome** , will add content sharing functionality directly via **Twitter, Facebook, LinkedIn, or Tumblr.**

35. **Google+ has** not officially announced the **RSS Feed** function, but we can do it ourselves by assigning the **Google+** main ID via PlusFeed.

36. If you accidentally sent **Google+** updates directly to other social networks, you can use the newly created **RSS Feed** to push content into it. Here, we introduce you to a Twitterfeed support service that will store those feed sections and stream directly to your **Twitter** or **Facebook** account.

37. Whenever you use the **+1** function with a certain article on the Internet, the system will display a **+1** tag in the **Google+ Profile** , making it easier for users to manage and store these pieces of content. . The utility that supports **+1** Button Chrome will add **+1** function button to the browser **URL** bar.

38. Imagine that you are working with different windows or tabs on the browser, but want to check **Google+** information? Please use the **G + Count** Chrome extension, which displays **Google+** notifications directly above the title, making it easier for users to monitor and monitor.

39. Another equally handy tool is **Surplus Chrome** - with the ability to assign a **Google+** notification button above the top of the browser, click this button to view live information right there without need to open **Google**

## Plus.

40. Currently, **Google** has not officially provided the functionality to create a memorable **URL** path in the **Google Profile** section, but some other support services have quickly 'filled' this vacancy. First, try [gplus.to](#), users just need to declare the **Google+ ID** parameter and choose any nickname, then the website will automatically create a short link pointing directly to your **Google+** page.

Good luck!
