

# 5 Bitcoin Mining Friendly Locations in the world

The years 2020 and 2021 have been great for digital coins, particularly Bitcoin. The years have proved the best for the coins making it a bar of digital gold.

Many investors and tech experts have been after the coins, and the story extends to other places as well. With the China ban, the popularity of Bitcoin and other coins has reached the next level. Unlike we have seen the rush going ahead in a big way, many more nations and locations joined the digital coin mining bandwagon. Here in this post, we will be dealing with the top five BTC and crypto mining-friendly locations. Meanwhile, if you are looking more on this subject, you can explore the sites like [yuan-paygroup.com](http://yuan-paygroup.com)™ for more.

Picture 1 of 5 Bitcoin Mining Friendly Locations in the world

## 1). Texas, United States

In Texas, everything seems to be big, and so is the case with the mining sector as well. Texas came in tough with the digital coin in a big way. Mining is accessible here. It has become the hottest place in the world when handling coins in a big way. Thanks to the favourable hash rate distribution, one can find it very simple and easy for BTC mining. Several BTC miners have been going down, and the China-based miners are now going on a roll as they have now developed a 100-acre site in this place called Rockdale in Texas. The said place is known to have the most stable government, and the power of the energy seemed okay.

## 2). New York

Despite having a high and prosperous place for human resources with higher costs, NYC has become a world leader in BTC mining. It handles around 20 per cent of BTC mining globally and thus has become the top place for mining. Most of the power in the country is developed using wind turbines and natural resources like dams found across the St. Lawrence River. It has made things easy for the mining process. Currency NYC remains on the top, and also the cold climate of the place is responsible for the same. Lastly, loads of empty factory places are perfect for BTC and other crypto mining processes. Lastly, this place relies on renewable for different forms of energy resources.

## 3). Siberia, Russia

Russia is among the third largest nation in the world known for its mining activity of BTC after the US and China. Generally speaking, it is a cold place known for its freezing point. At the same time, it has inexpensive energy bills that make mining an affordable bet. The Russian government also relies on the option of gaining cash in people's accounts to tax them, and mining gives them a chance to mint money. Also, the Russia-based government is seen coming out with the cash that has further given income and taxes in a big way along with the

Russian assembly.

#### 4). Johannesburg, SA

The next place is Johannesburg in South Africa, and it is an essential economic zone in the African continent. It is also regarded as the gold mine place for other places, and mining is also added to this list. However, this place's best and exciting aspect is that it is not much qualified for mining things, yet it is included in this list. The reasons are apparent; we can find SA with some unreliable power grid, which further helps get too many blackouts. It has a good history of having unstable governments with labour issues. Despite all these factors, we can find this city the best place for mining. The reasons are apparent, and it has several innovative approaches toward digital coins that make it mining friendly.

#### 5). Vancouver, Canada

Unlike the other cities in the US, we see this place also not very friendly to many factors. The place is cold, and the heat generated with mining is helpful in many ways. Hence it is fair to say that it kills several birds with a single stone. Thanks to the massive amount of heat generated with the mining process of BTC. Thus the mining process wins at other places making things work for the same. As per the city's energy department, VC remains the best place for BTC mining. It has helped to gain 96 per cent of the electricity that you can use in mining.
