

5 customizations on Windows 10 make the game more 'smooth'

Here are 5 small tweaks on Windows 10 that help increase gaming performance significantly. Try the trick and see what the results are.

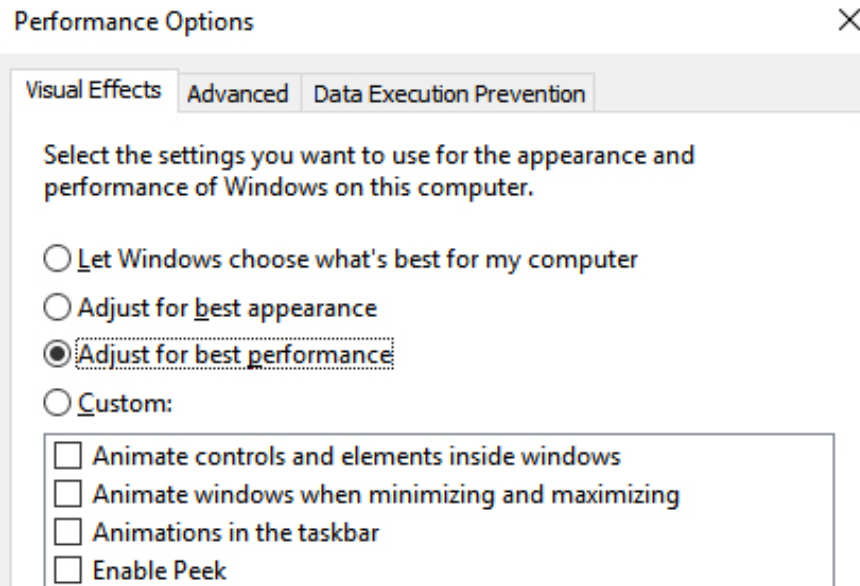

Windows 10 is a popular operating system now for everyone, it is also a popular operating system among gamers to experience games. However, not everyone has the right to own a system with good configuration to play games. And if you also own a computer like that, please hold in hand 5 customizations on Windows 10 in this article to increase gaming performance on Windows 10 significantly increased. Let's try the trick and see how it works.

1. Adjust the effect of the operating system to make the game smoother

Windows 10 has a very nice interface, all fancy things consume quite a lot of computer resources. When you are playing a game, the Windows interface always runs in the background, resulting in unnecessary power consumption. Therefore, to optimize the game, we should turn off unnecessary effects on Windows 10.

First, go to the search section of Windows 10 and type the phrase *performance*> click option *Adjust the appearance and performance of Windows*> Now the *Performance Options* window will open and click the *Adjust for best performance* item > Finally Click the *Apply* button > *Save*.

Switch to the *Advanced* tab and check if the value is selected in *Programs* .

2. Clean up the system to increase disk space

When playing games on a computer, so that the game can work best, the free space on the Windows 10 system drive (the default is C drive) is very important. Therefore, always remember to ensure the free space of the system drive to make the game work smoother. Windows 10 supports a powerful tool to 'clean' the junk on the computer that is *Disk Cleanup*, so you should regularly run this program to make your computer 'cleaner', thereby enhancing the gaming experience.

1. Free up hard drive space automatically on Windows 10 with Disk Cleanup

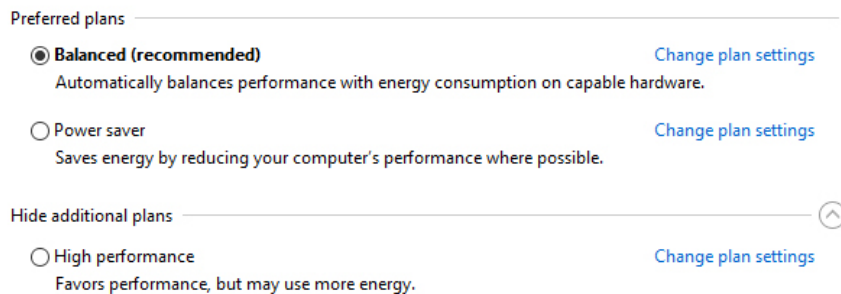

3. Don't save electricity

From Windows 7 onwards, Microsoft has invested a lot in the energy-saving capabilities of devices using this operating system, especially allowing users to choose the mode of operation of the device to save power. .

However, if you've ever used Power Saver on Windows, you probably know how slow it is. Therefore, it is best not to save power, even ready to switch to *High Performance* , maximize the power of components in the system, although its power consumption will be more than normal (*Balanced* level).

To change the modes you do the following: Press Windows + X> Control Panel> System and Security> Power Options> High Performance.

Note: In the latest updated versions of Windows 10, the *Power Saver* option has been removed, so if you have Update Windows 10, you may no longer have this option.

4. Maximize network bandwidth for Windows 10

By default of Windows 10, the *Limit reservable bandwidth option* is not configured so the operating system will automatically retain 20% to 30% of the bandwidth for the system. This bandwidth is used for other purposes such as updating Windows, controlling user's computer, . When using the Internet bandwidth of your home, then you can only use 70 - 80% bandwidth Network leads to lag state. If you don't want it to happen, improve your network bandwidth by changing the *Limit reservable bandwidth option* . This setting will help Windows 10 use 100% of your Internet speed so the speed will be significantly improved, especially in case of cable breakage, making the network very weak.

To change this customization, follow the 20% faster Internet Acceleration tutorial in TipsMake.com's previous Windows sharing. This tutorial applies to all versions of Windows, now free up bandwidth to increase gaming performance, this change will not affect the system so you don't have to worry.

5. Update the latest driver for Windows

This is something that few people pay attention to but it plays an important role in helping the game run faster and smoother on your computer. Failure to update the latest driver for Windows will cause the Game to not be able to take full advantage of the computer. Therefore, to improve performance for gaming computer, please update the latest driver for Windows. If you do not know the implementation, TipsMake.com has a tutorial article for you, please refer to 5 basic ways to update, update the driver for this computer.

Thus, we have instructed you 5 customizations on Windows 10 to play "super smooth" games, certainly with these settings, gaming performance will be significantly improved and you will no longer worry About the operating system that hinders your gaming experience.

Good luck!
