

# 5 Simplest Ways to Change Windows 10, 7 Computer Passwords in 2024

Changing your Win 10, 7 computer password is very important to secure your data. Let's refer to some effective ways to do it with Hoang Ha PC!

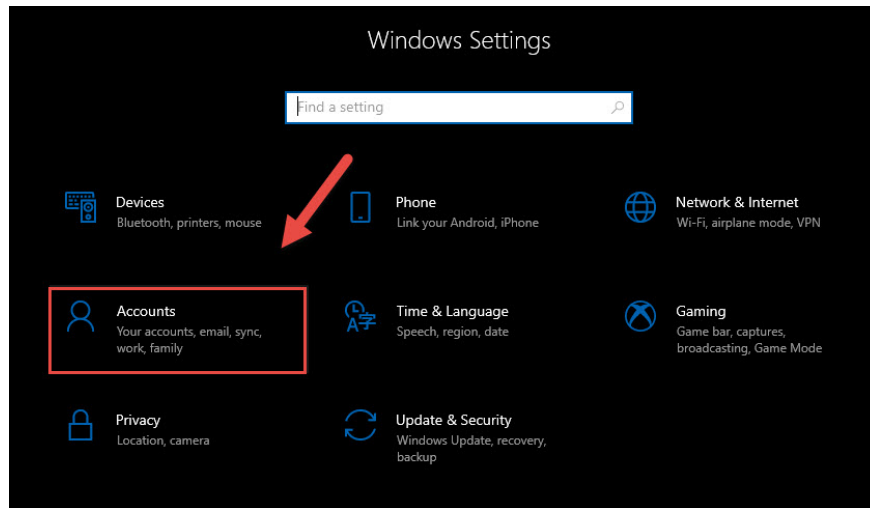

## 1. Change Windows 10 Computer Password Using Settings

Setting a **password for your computer** is essential to help you ensure data security. However, in some cases you forget your login password, don't worry. Because with **Settings**, you can **change your Win 10 computer password** easily and effectively. You change your password in the following order:

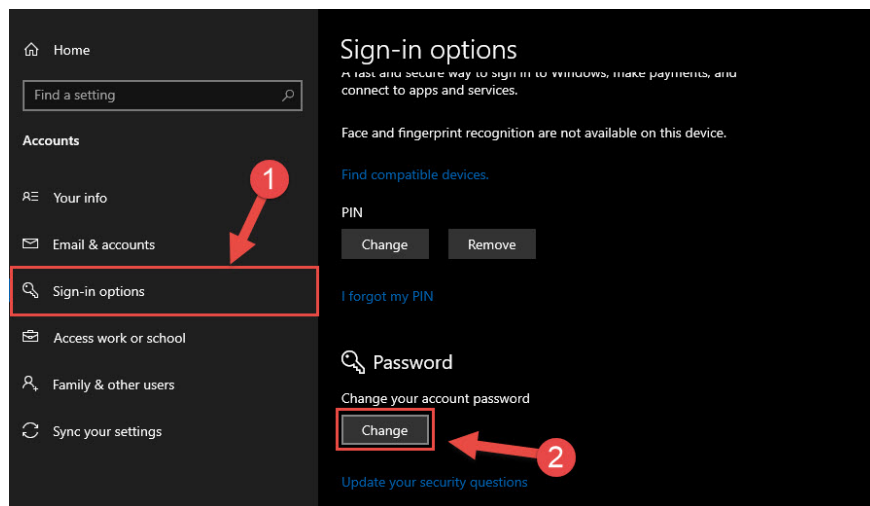

**Step 1:** In the bottom left corner of the screen, click the Start icon. Then, click the person icon and select **Change account settings**. Or you can combine the shortcut key **Win + I** to launch **Settings**.

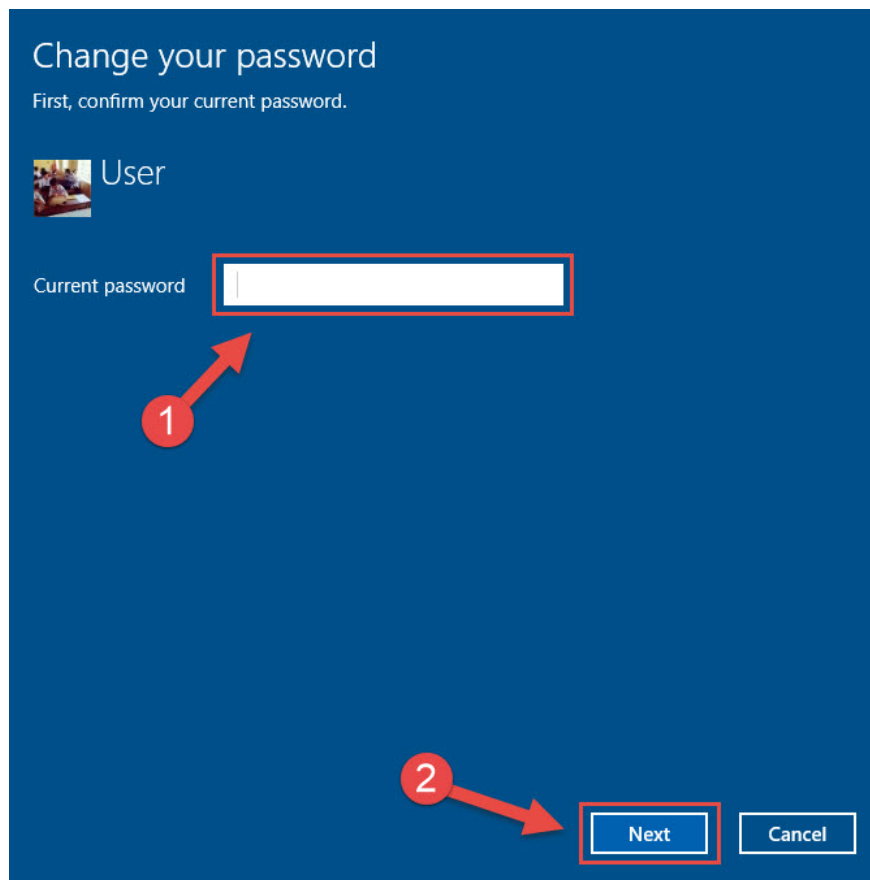

**Step 2:** A window similar to **Control Panel** on Windows 10 appears. You find the **Accounts** section (This section will help you manage everything related to accounts on your computer).

**Step 3:** At the Accounts interface , click on **Sign-in options** and options will appear including **Password** , **Privacy** , **Related settings** . Click **Change** in the **Password** section .

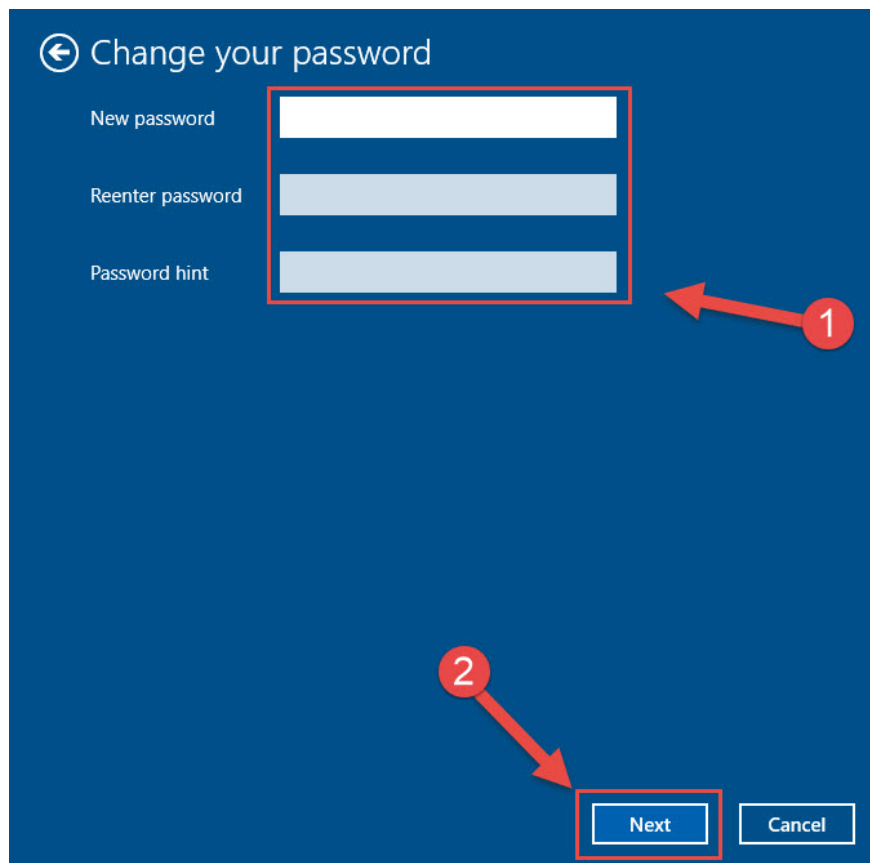

**Step 4:** The system will ask you to re-enter your current password for security reasons. If you still remember it, enter it. Then click **Next** .

**Step 4:** In this section, you will enter a new password and password hint (in case you forget it later).

- **New password:** Enter a new password.
- **Reenter password:** You re-enter the new password again.
- **Password hint:** Password hint in case you forget.

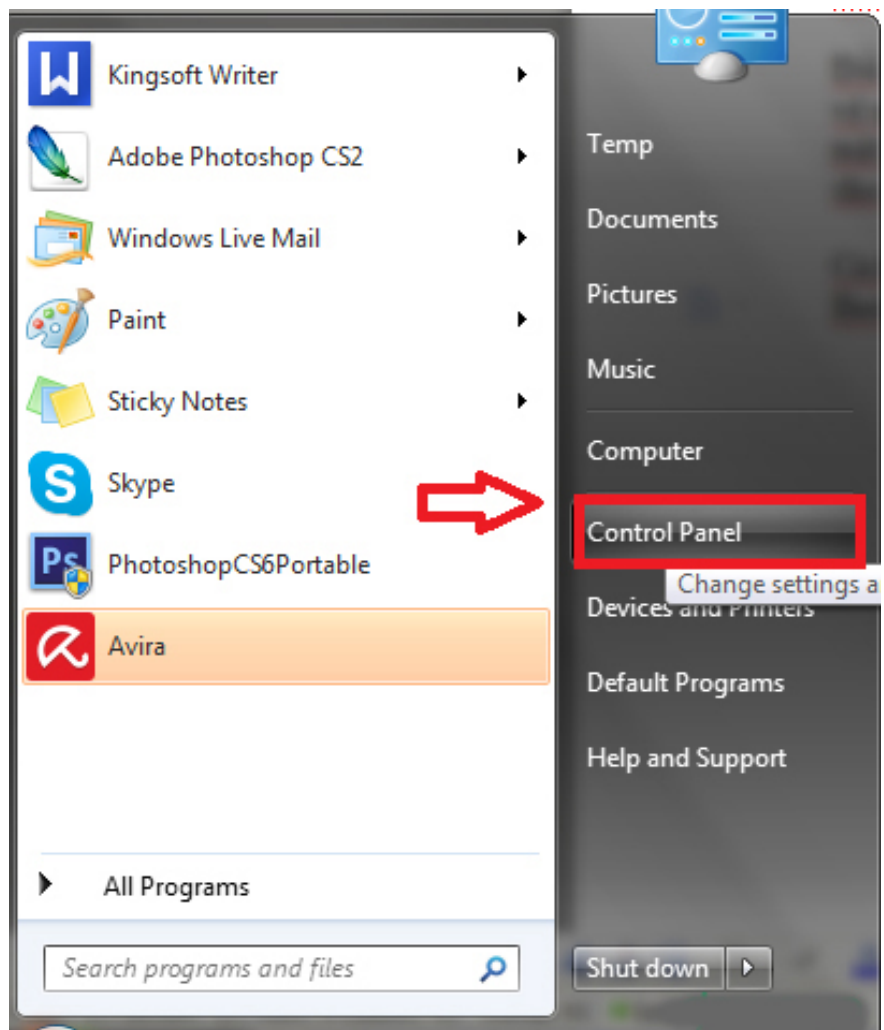

**Step 5:** Click Next in the bottom box and then select **Finish** . Thus, changing your Win 10 computer password using Settings has been completed.

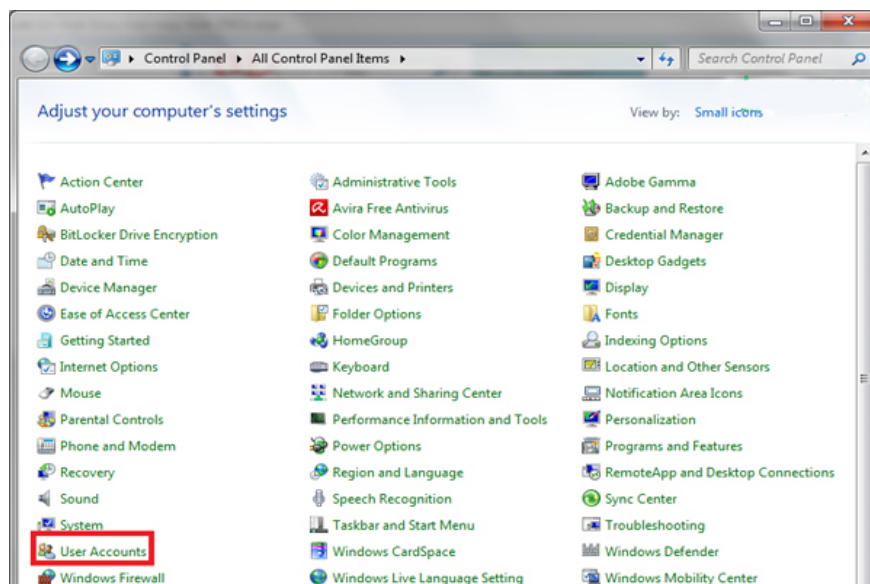

## 2. Change Windows 7 Computer Password Using Control Panel

If your computer is using Windows 7 software, you can quickly change your password through the following steps:

**Step 1:** Start **Start** by clicking the icon in the bottom left corner of the computer screen. Then click **Control Panel** on the right side as shown.

**Step 2:** In the next interface, the user finds and clicks on the **User Accounts settings group**.

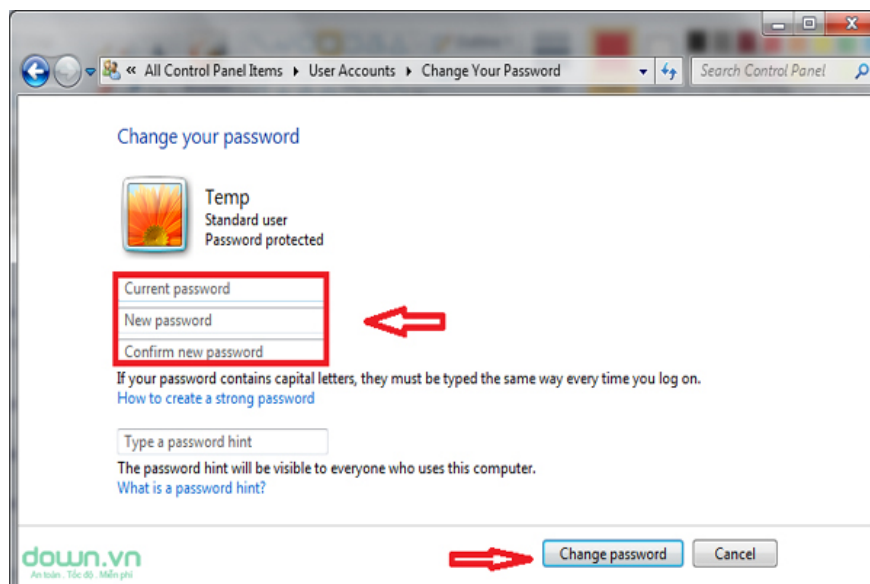

**Step 3:** Select 'Change your password'

**Step 4:** A window appears. The user can see 3 blank boxes.

- In the **Current password** box , enter your current password.
- In the **New password** box , enter the password you want to change.
- In the **Confirm new password** box , re-enter the new password to confirm.

**Step 5:** Select the **Change password** box to complete changing the Win 7 computer password.

### 3. Change Password of Win 10, 7 Computer Using Computer Management

Another way to help you change your Win 10, 7 computer password is to use Computer Management. You perform the following steps:

**Step 1:** Right-click on the **This PC** icon and select **Manage** . **The Computer Management** window will appear on the screen. Click on **Local Users and Groups** and then select **Users** .
