

5 smartphones with the most memory today

Below is a list of smartphones with up to 512GB of internal memory available on the market today.

In recent years, the demand for users to store memory on smartphones is increasing. Therefore, in addition to the development of performance, manufacturers also pay attention to increasing storage space on smartphones. Since 2018, some smartphone manufacturers have launched smartphones with memory versions of up to 512GB, equivalent to HDD on laptops. Below is a list of smartphones with up to 512GB of internal memory available on the market today.

1. Huawei Mate RS Porsche Design

Huawei Mate RS Porsche Design - an upgraded version of the Huawei P20 Pro launched in March 2018 is the first smartphone with integrated internal memory of up to 512GB.

In addition to the huge internal memory capacity, Huawei Mate RS Porsche is also impressive when equipped with both back cover fingerprint and embedded fingerprint lock on the touch screen.

Huawei Mate RS Porsche Design with 512GB internal memory is priced at 60 million.

2. Samsung Galaxy Note 9

Launched from 8/2019, Galaxy Note 9 is still one of the flagship is considered the best in both configuration, camera and modern features.

In addition to the new-generation S Pen, Galaxy Note 9 also gives a strong impression to users who have a version that can store up to 1TB of data thanks to 512GB of internal memory and the ability to integrate more memory cards. Micro SD.

1. Thousands of thousands of dollars in the interior of the Galaxy Note 9 have just been released
2. Unique features are unique to the Galaxy Note 9's new S Pen
3. Will Samsung Galaxy Note 9 replace computers?

3. iPhone XS / XS Max

The 2018 iPhone pair is not only equipped with a completely new Apple A12 chip, but also has a memory version of up to 512GB, which is able to accommodate the user's massive storage capacity.
