

# 5 things to remember when using hot and cold water plants

What should be noted when using a hot and cold water plant to ensure safety and prolong the life of the device so you no longer have to boil water every day?

**In this article, TipsMake.com will share with you 5 notes to keep in mind to ensure proper use of hot and cold water plants, safety and longevity of equipment!**

Currently, the presence of a hot and cold water plant in the home or office has become an indispensable thing, so people can always have cool glasses of water when the sun is hot, warm water is always available. when it is cold or there is always hot water to make tea, make coffee .

Although a familiar household appliance, not everyone knows how to use it properly. Here are some things users should keep in mind to ensure the efficiency and longevity of water plants.

## 5 things to remember when using hot and cold water plants

1. Before first use
2. Location of hot and cold water plants
3. How to use water bottles for hot and cold water plants
4. Note when moving hot and cold water plants
5. Electrical safety when using hot and cold water device

### 1. Clean the water heater before using it for the first time

When buying this equipment from supermarkets, centers or electronics stores, most products are new in stock, packed with raw material. However, not so that the product does not have dust, only that the dust layer is not thick enough for the eyes to detect immediately. Therefore, you should clean the device one time with a soft cloth to make sure the product provides this drinking water clean and hygienic before use!

Along with cleaning, you should also pay attention to cleaning the water pipe of the machine. To do this, open both of the machine's taps, allowing water to flow from 3 to 5 liters, to help clean the duct as well as to prevent the duct from clogging later.

You should note that during use, it is necessary to regularly clean the device with a soft cloth, absolutely do not use cleaning products to not damage the details of the device.

The hot and cold water plants should be cleaned before first use.

## **2. Place hot and cold water plants away from walls and other objects**

Keeping plants hot and cold close to the wall for space saving is a common habit in most families and offices. However, this will make the device difficult to heat when operating, resulting in reduced performance and longevity. Therefore, you should keep in mind that placing water plants away from walls and other objects is at least 10 - 15 cm.

In addition, it is also necessary to avoid placing the device near a window or in locations exposed to direct sunlight, locations that may be exposed to rain, high temperature locations such as heaters, stoves, and furnaces. grill . to ensure performance and longevity for the device.

### **3. Use the water bottle for the hot and cold plants properly**

You should pay attention to using a water bottle with a capacity suitable for the device. When there is no water tank or when you need to replace the water tank, you need to disconnect the power.

In order to avoid water spills, it may cause a fire of the device, allowing the float of the water tank to match the water heater.

Do not let the hot water cool to the wall.

### **4. Do not use hot and cold water plants immediately after moving**

In the process of using, if you have to move the water plant, you need to wait 1-2 hours before using the product again, avoid the phenomenon of gas shock in the device, leading to lack of safety, affecting water quality as well as reducing the machine's durability.

## **5. Note electrical safety when using hot and cold water device**

When using a hot and cold water dispenser, you need to use a 220 V voltage stabilizer. If the power is flickering, the device will be inefficient, inoperable or worse, failing the circuits, causing fire.

You should also turn off the power when there is no water tank or when changing water to avoid electric leakage.

Hot and cold water plants should also be used with a separate outlet, to avoid power failures affecting other household appliances.

Switches, sources . also need to be cleaned and checked regularly to detect errors and conduct warranty and repair promptly.
