

# 5 unique features of Pixel 9 Pro Fold

Google launched the Pixel 9 Pro Fold at the Made by Google event in August 2024. While there are some improvements over its predecessor to compete with the Galaxy Z Fold 6 and OnePlus Open, these are the ability that many people are most eager to try.

## 1. Performance of Tensor G4 Chip

The Pixel 9 Pro Fold is equipped with Google's most efficient chip to date, the Tensor G4 processor. According to Google's statement, this 4nm chip is 20% faster when browsing the web and 17% faster when launching applications compared to its predecessor.

While many Android flagships, like the Galaxy Z Fold 6, offer 12GB of RAM, the Pixel 9 Pro Fold has 16GB of RAM to ensure smooth performance of its AI-powered features. Active users are eager to see how much they can take advantage of the multitasking capabilities of this foldable phone.

## 2. Professional camera features

One factor many people look for when buying a new smartphone in 2024 is a good camera. The camera hardware of the Pixel 9 Pro Fold is not much different from its predecessor. However, some of the features that Google introduced make up for that.

If you're someone who enjoys capturing fireworks or the moon late at night, Pixel's Night Sight Video feature won't disappoint. Even when you record video in low light, Google's AI applies noise reduction to ensure you get the highest quality video.

One of the iPhone camera settings used to capture better video is Macro Control, which allows taking photos of objects as little as 2cm away. With the Pixel 9 Pro Fold, Google offers Macro Focus, which allows for high-quality photography of the smallest objects.

If you've ever tried taking a photo of a toddler who refuses to stand still or look at the camera, you'll appreciate the Made You Look feature on the Pixel 9 Pro Fold. It allows you to display colorful images on the external screen of your device to attract your child's attention. When you see your baby's smile, you can take a photo and keep the memories forever!

### **3. Google AI editing capabilities**

If you are a frequent photographer, you probably don't have many photos taken with your loved ones. This is why many people are so excited about Google's Add Me feature, which essentially merges two images to ensure no one is left out. All you need to do is take a group photo, then ask someone to take another photo while you switch places with them, and let Add Me work its magic!

Another useful AI feature from Google is Magic Editor. This feature reframes the photo after you take it using Generative AI and techniques like the rule of thirds to suggest the best cut.

Reimagine is another feature that many people are excited about. This feature allows you to select a specific part of the image you want to edit or enhance. Whether you want to add a new element or change an existing one, just describe the changes you want, and you're done!

## 4. Pixel Screenshots

Although many people use apps like Google Tasks to organize their lives, this only helps keep track of a small portion. Half of your device's library is filled with screenshots, and if you never delete old photos from your phone, finding screenshots when you need them is often a challenge. In such cases, Pixel Screenshots, a Pixel exclusive app, can come in quite handy.

The AI ??feature uses Gemini Nano to extract valuable details from screenshots and make them searchable. For example, if you take a screenshot of a graduation invitation, you can ask Google for details like time, date, and location, and Pixel Screenshots will retrieve the information for you.

## 5. Battery life more than 24 hours

If you have to travel a lot every day, carrying a bulky power bank with you all the time is not ideal. This is why it's important to choose devices that promise great battery life. Luckily, the Pixel 9 Pro Fold has a 4,650 mAh battery.

Google claims the Pixel 9 Pro Fold can last more than 24 hours on a single charge and up to 72 hours with Extreme Battery Saver enabled. Although the battery is slightly smaller than its predecessor, the Tensor G4 chip consumes less power in daily use, implying that a single charge will last longer.

While these estimates are based on Google's testing, it's fun to put them to the test and reduce how often you need to charge your phone. If the battery life is close to what Google claims, then the Pixel 9 Pro Fold will be impressive!

With a starting price of \$1,799 for the 256GB version, the Google Pixel 9 Pro Fold is one of the best folding phones you can buy in 2024. Google promises 7 years of operating system upgrades, updates, and more. Security updates and new features through Pixel Feature Drops. So if you're considering buying your first foldable phone, now might be the perfect time to start!
