

5 ways to increase charging speed for your phone, both safe and easy to do

How to charge your phone properly and safely, Here are 5 ways to help increase the charging speed very quickly, safe and easy to perform operations.

1. Room temperature

The best temperature for a battery to absorb power quickly is 20 degrees. Besides, need to remove the charging case and put the phone in a cool place. Doing so will greatly increase the charging speed because charging will limit the heat generation that will slow down the charging process.

2. Use the wall outlet to charge the battery

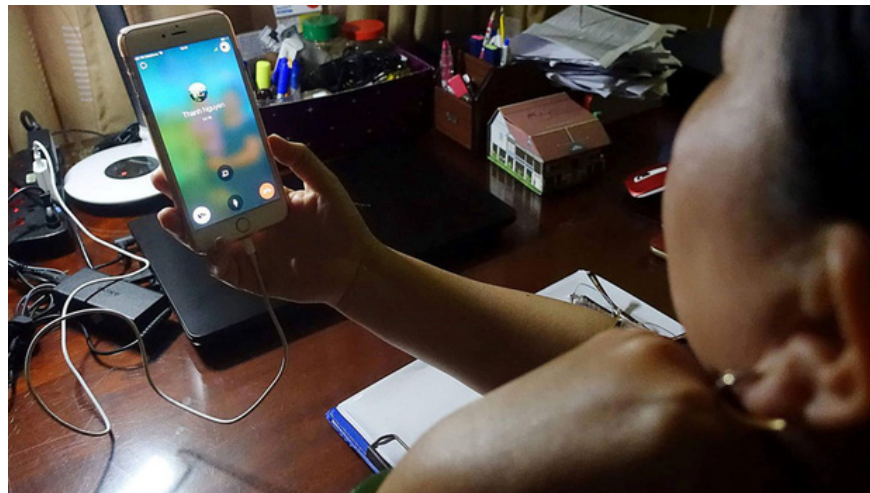

When using a wall plug, it will not get hot because it does not come in contact with any surface. However, do not dangle the phone while it is charging as it may fall to the background. So the safest and most correct way to charge is to plug the charging cup in, wrap the cable into a moderate circle then let the phone lie evenly in the circle.

3. Use a power bank

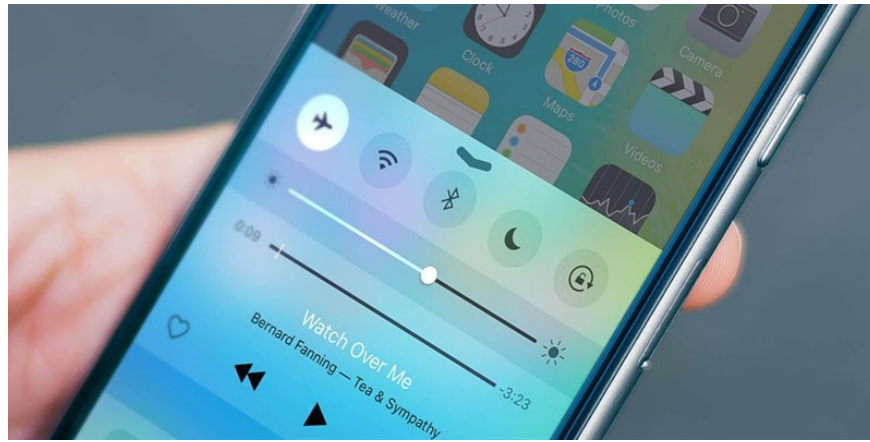

Charging the battery with the power bank greatly increases the charging speed and also reduces the chance of fire and explosion significantly. However, you also need to note that when the battery is fully discharged, avoid overcharging the battery to more than 100% because it will lead to the battery bottle.

4. Limit the use of the phone while it is charging

Using your phone while it is charging causes it to overheat, drain energy resulting in a longer full charge. Moreover, if you charge it while using it for a long time, it will lead to a battery bottle, even with a high risk of fire. So if you have to use the phone while charging, you need to let the screen light down to the lowest possible level, leave airplane mode if you don't need it at that time, .

5. Turn on airplane mode when charging the battery

This can double the charging speed because in this mode your phone will be turned off all radio components such as portable radio, GPS, Bluetooth, cellular radio connection.
