

# 5 ways to speed up your internet when using a VPN.

VPNs allow for fast, secure, and safe information sharing between computers. However, this security feature can slow down your internet speed. Here are five ways to speed up your VPN.

VPNs are no longer unfamiliar, allowing for file and information sharing between multiple users on the same system. Windows also supports VPNs when needed. Creating a VPN client on Windows 7, 8, and 10 is now easier, helping you work more efficiently.

## 5 ways to speed up your internet when using a VPN, increase network speed when using a VPN

### *Avoid using too many layers of security.*

To speed up your internet connection when using a VPN, limit unnecessary security layers. VPNs encrypt data in multiple layers, but the recipient must decrypt it, slowing down your network speed. For familiar connections, you can disable encryption to improve performance.

### *Choose a different server.*

When using Steganos Online Shield VPN, choosing the right server helps improve speed. Data has to pass through the VPN before reaching you, so a low-quality server will slow it down. Choose a nearby server, such as Singapore, to optimize speed.

### ***Set up the VPN on your device instead of the router.***

Instead of installing a VPN on your router or modem, set it up directly on the device you want to use. Routers and modems are often not powerful enough to handle many encrypted files simultaneously, slowing down the network. This method helps speed up your internet connection when using a VPN.

### ***Use a wired network.***

Instead of installing a VPN on your router or modem, set it up directly on the device you want to use. Routers and modems are often not powerful enough to handle many encrypted files simultaneously, slowing down the network. This method helps speed up your internet connection when using a VPN.

### ***Change the VPN connection protocol.***

VPNs use two protocols: UDP and TCP, each with its own advantages and disadvantages. UDP is faster than TCP, but less stable, making it unsuitable for video streaming or gaming. Depending on your needs, you can choose the appropriate protocol to speed up your internet connection when using a VPN.

If you frequently use or switch VPNs to speed up your internet connection, it can easily cause network disconnections. In such cases, you should reset your network to its original state to ensure smooth connections before continuing to use the VPN.
