

5 ways to take screenshots on a Dell computer without software

Guide you 5 ways to take screenshots of Dell computers without simple supporting software, done on computers running Windows operating system.

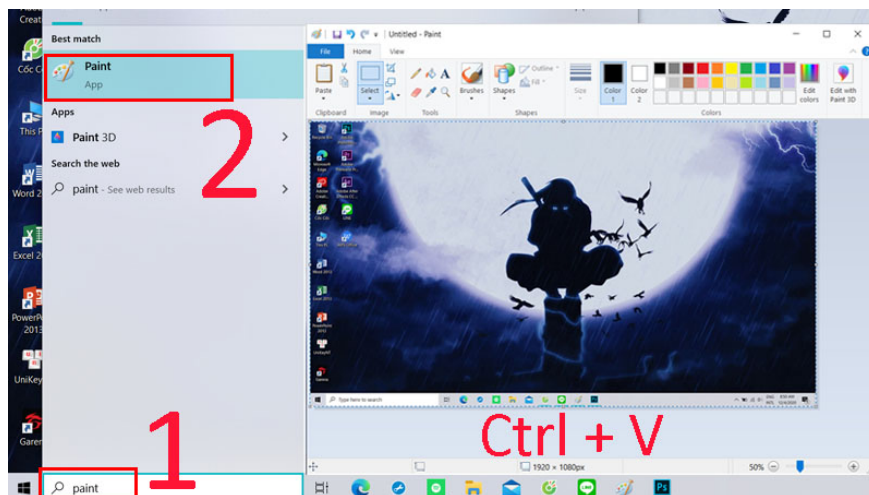

You often use the computer but do not know how to take a screenshot of the computer you are using because you cannot take your phone to take it again because the pictures are quite blurry. This article will guide you on 5 ways to take screenshots of a Dell computer without simple assistant software. The instructions below are done on computers running Windows 10 operating systems .

1. Use keyboard shortcuts

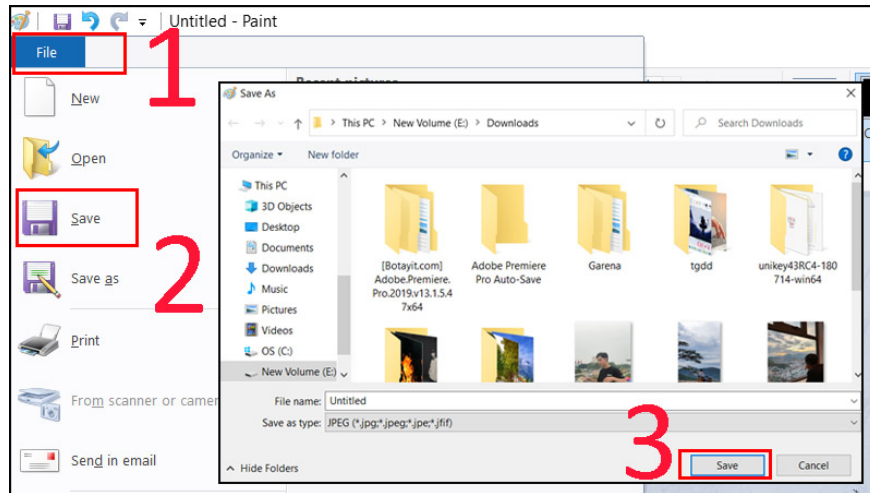

- **Step 1** : Press the **Alt + PrtSc** key combination to take a screenshot of your computer.

- **Step 2** : In the search box type **Paint** > Select to **Paint** > Press **Ctrl + V** to paste the image.

- **Step 3** : Click **File** > Select **Save** > In the **Save as type**, choose **JPEG** format > Select **Save** .

2. How to take a screenshot is saved directly

Step 1 : With these Dell Windows 10 computer screenshots, you need to use a combination of two keys simultaneously, **Windows + Screen**, to be able to take photos directly.

Immediately after you press this key combination you will see the screen turn dark within 1 second, which means you have completed the capture of Windows 10 computer.

?

Step 2 : Then just go to **This PC** > Go to the default collection of **Picture** on your laptop > Click on **Screenshot** .

3. Use the Spinning Tool

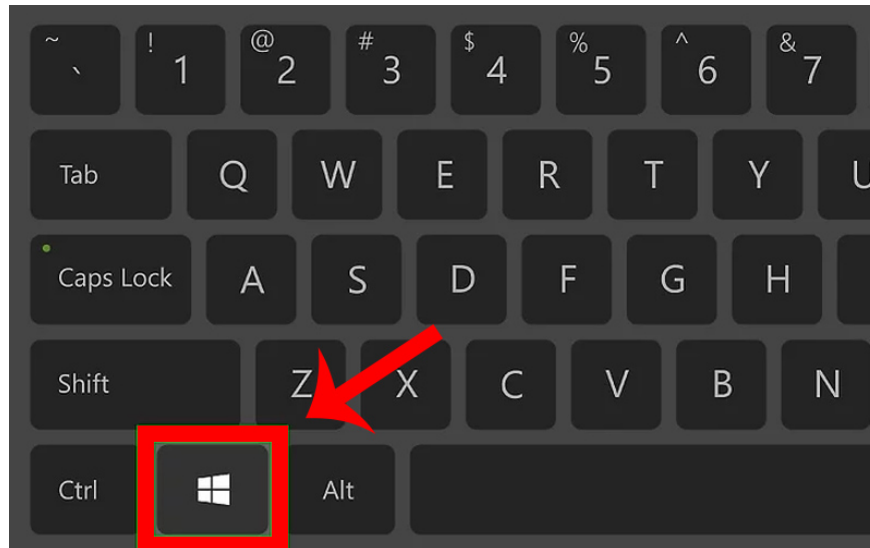

- Step 1 : Open the Start menu

Do this by pressing the Windows key or clicking the Windows logo in the lower left corner of the screen.

The Snipping Tool is not included with Windows XP.

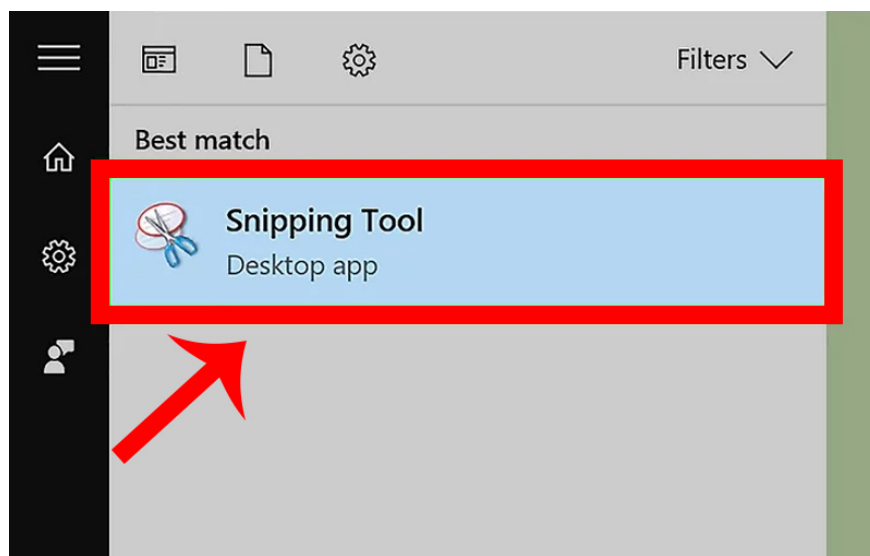

- Step 2: Type Snipping Tool into Start

This step will bring up the Snipping Tool icon at the top of the Start window.

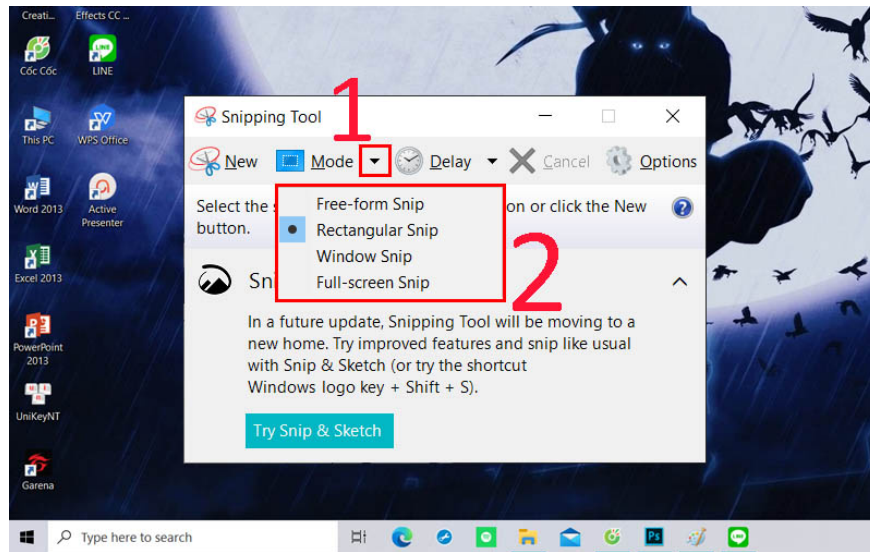

- Step 3: Click the Snipping Tool icon

The icon has a scissors shape. This step will open the Snipping Tool application.

- Step 4: Open screen capture options

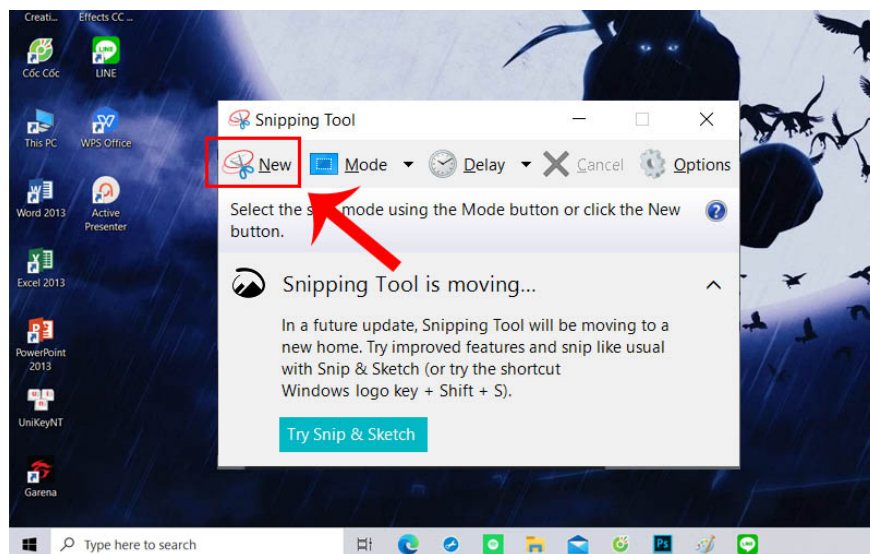

- + **Free-form Snip** (**Free-form Snip**): This option allows you to draw any shape with your mouse. The area inside the picture will be captured as screen shot.
- + **Rectangular Snip** (Snip rectangle): This is the default image, and allows you to draw rectangles with any scale to make screenshots.
- + **Window Snip** (Snip window): This option screen capture specific window, hold down the Alt like and press Print Screen. You can choose which window you want to use.
- + **Full-screen Snip** (Snip full screen): This option photographed the entire screen, but does not show the Snipping Tool window.

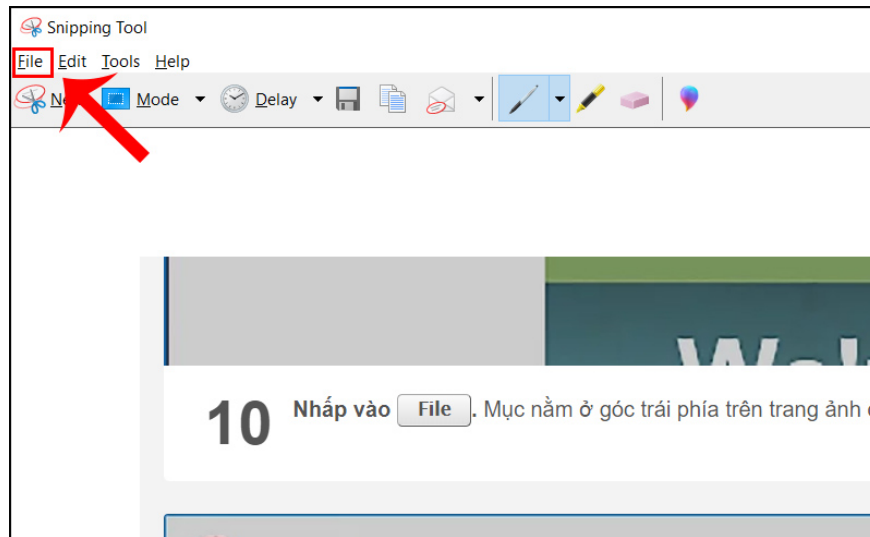

- Step 5: Click New.

Click and drag the mouse across the screen> Release the mouse.

If you choose **Full-screen Snip** , clicking **New** will capture the screen.

- Step 6: Choose File> Select Save as> Select a save folder

4. Away from the screen by any distance

Step 1 : Press and hold the **Windows + Shift + S** combination at the same time to capture the area you localize.

Step 2 : Go to **Paint** to be able to paste the image and save it.

5. Use the Gamer Bar to take pictures

Game Bar is a feature that only appears on Windows 10 and has integrated with the Xbox app that allows users to take pictures, record videos and share them on Xbox systems.

Step 1 : Use the **Windows + G** key combination and click **Yes, This is a game** .

Step 2 : Click on the capture icon or use the key combination **Windows + Alt + Print Screen** to be able to take a screenshot of your laptop dell and when notified that the image has been saved> Click on it.

The interface of Microsoft Xbox has appeared and you clicked on **Open Folder** to be able to see the folder to save the image.
