

5 What to note when choosing a memory card for the camera

Choosing a memory card for a cruise camera is a very important job. So, choose the memory card for the camera camera to pay attention to? Follow the article to get an answer!

Choosing a memory card for a cruise camera is a very important job. A suitable memory card will help to record images and videos for each trip quickly and conveniently. So, choose **the memory card for the camera camera** to pay attention to? Follow the article to get an answer!

Select the memory card for the camera camera to pay attention to?

Pay attention to the memory card capacity

On the market today there are many types of memory cards with capacities up to 256Gb or 512Gb. However, not all sizes are suitable for use in cruise monitoring equipment. Usually, surveillance camera models on the market will support memory cards of about 16Gb - 128Gb. Please note this to select the memory card with the appropriate capacity to avoid waste.

Read and write speed of memory card

These are two important factors when choosing them to use for cruise surveillance cameras.

The read speed of the camera will help you know the direction of travel and how far your journey will go. Although this is only a small detail, it is very much influential to the process of using your camera.

4K video recording mode 30fps is the most common and popular video recording mode today. At the same time, it is also Gopro's highest rotation speed. A 30fps Gopro will have a memory card with a bitrates of 60mb / s. So choose a memory card that is really suitable to be able to best meet the recording speed of the camera.

In fact, when the travel camera works, there will be cases that encounter problems from objectivity. For example, the weather, the environment or the outdoor temperature . These factors will directly affect the mode of rotation as well as the rotation speed of the camera. So a higher capacity memory card will help your camera "fight" with these agents better.

Class notation on memory card

This is the specific symbol that the SD (SD Association) association gives and prints directly on the memory card. This makes it easy for customers to buy a genuine quality memory card, suitable for their usage needs.

Currently on the market are prevailing 2 types of symbols that regulate the minimum performance of each type of memory card. These two types of symbols include:

1. Speed Class: They include classes 2, 4, 6 and 10 that are mainly used on current consumer devices such as music players, smartphones or laptops .
2. UHS Speed Class: Includes UHS Speed Class 1 (U1) and UHS Speed Class 3 (U3). They are used in specialized devices for products such as journey cameras or camcorders .

Interested in brand memory card

The brand that produces a reputable memory card will be the deciding factor in the quality of the memory card. Amidst the countless brands emerging in the market, do you find it difficult to choose? Sure, some of the names below will be an ideal suggestion for you to choose: Xiaomi, Transcend, Sjcam, Lens, SanDisk .

Price of memory card for camera journey

Depending on the size, type of travel camera and purpose of use, you can choose memory cards with different prices. On average, the price of the travel camera memory card ranges from 200,000 VND to 1,000,000 VND. This price is also assessed as being suitable for many customers.

In addition to the 5 notes when choosing to buy, during the process of working with the memory card, you should note some details such as:

1. Memory cards are very susceptible to factors such as temperature, humidity, collision . so when used, avoid these factors so that the memory card can ensure optimum quality.
2. When removing the memory card from the travel camera, you should turn off the power so that the camera does not hang or suddenly stop, in addition to help keep your device safer.
3. Do not allow the camera to work continuously for a long time, this not only negatively affects the cruise camera but also makes the memory card corrupt, hang, and lose operation due to the heating of the device.

Above are the notes to help you easily choose memory card for the camera. Hopefully, you will quickly find the most suitable type of memory card to help you travel.
