3. Price reference table for data recovery

Most centers have to determine the status of the hard drive, the level of recovery and then give the correct price for customers to refer. However, it can be divided into different cases of hardware errors for reference readers.

1. Case 1: Delete mistakenly, ghost, format, override Windows . Price fluctuates around 600-700 thousand / 1TB drive, larger capacity will be more expensive. The rate of data retrieval depends on the time from the time of deletion to your detection and operation later.
2. Case 2: Device firmware error, Bad sector. Price is about 600 - 2.5 million with the capacity of 80GB - 1TB.
3. Case 3: Device hardware error, reader, disk error from . will be quoted directly due to the need to check the actual situation.
4. Case 4: Server hard drives such as SAS 10k, SAS 15K, SAN fail RAID 0,1,2,5,10 . about 1.5 million / 300GB drive.

Note to users, do not bring the hard drive to check in many places to avoid the situation where there are no reputable and experienced hard drive damage, reduce the rate of data retrieval on the device.
