

6 AR apps for great Android phones you should not miss if you are using AR-powered smartphones

Currently, smartphones with AR support including Google's flagship Pixel / Pixel XL / Pixel 2/2 XL and flagship Samsung 2017. If you own one of them, try using the 6 apps below to get closer to this technology.

2 technologies are virtual reality (Virtual Reality - VR) and augmented reality (Augmented Reality - AR) are becoming new trends in the past few years.

VR has been known for many types of virtual reality glasses. Meanwhile AR with support from Google and Apple with two sets of ARCore and ARkit applications, the platform is also on a lot of effective applications in life.

Currently, smartphones with AR support including Google's flagship Pixel / Pixel XL / Pixel 2/2 XL and flagship Samsung 2017. If you own one of them, try using the 6 apps below to get closer to this technology:

1. AR Stickers

This is an extremely interesting application that helps you master the world around you through a smartphone. AR Stickers will bring you interesting experiences with characters and objects from Hollywood blockbusters. You just need to scan through the space around you, where you want the AR stickers to appear, then drag AR Stickers to the desired location and adjust their size to your liking. You can move 360 degrees around the AR object to get the best view. In addition, with AR Stickers you can also create interesting short clips along with AR stickers.

2. Horizon Exploer

With Horizon Exploer, you can explore the world around in two special ways, bringing about extremely interesting experiences.

1. Experience the world through 360 panorama photos by moving around.
2. Experience the view of space through the view of flying "bird eyes", you can adjust and adjust close or far as you like.

6. GR ARCore and ARCore Experiments

With GRC ARC, you can understand the working mechanism of ARCore. When the device scans the outer surface real-time, the device will recognize the flat surface. At this point, a net and countless tiny points covered around the surface will appear inside the screen and you can put the Android robots in it. But, you cannot interact with them, you can only move the phone around to observe robot models from all angles.

ARCore Experiments also works similarly to GR ARCore but is more advanced than models that can move. At the same time, you can also draw anything on different surfaces as you like.
