

6 benefits of playing games on laptop

There has long been a debate among gamers about whether to use a laptop, desktop, or console for gaming. While each option offers its own benefits, gaming on a laptop stands out in a unique way.

Here's why you should choose a laptop over other gaming setups.

1. Mobility is key

One of the most obvious, and perhaps the biggest, advantages of gaming on a laptop is portability. Unlike a traditional desktop or console setup, a gaming laptop allows you to take your setup with you wherever you go. Whether I'm traveling, visiting friends, or just looking to change up my gaming environment, the option to play games anywhere is incredibly convenient.

Even at home, you are not limited to a specific table or location, but can move around and play games from the couch, bed, or anywhere else. This flexibility makes the gaming experience much more enjoyable.

Unlike many older gaming laptops, modern models like the Asus ROG Strix G16 are quite light and compact, so carrying them around isn't a problem. For gamers on the go, the freedom to play games anywhere, anytime is a significant advantage that a desktop or console can't offer.

2. Space-saving design

Another benefit of gaming on a laptop is that it takes up very little space. You can fit everything you need for intense gaming on a small desk. This is especially useful because people often don't have a lot of space to fit everything. The minimalist design of a gaming laptop allows you to easily move it away when you're done playing, freeing up your desk for other activities, like reading.

The compact nature of laptops helps a lot, especially in small living spaces like apartments. There's no need to dedicate an entire section of your home to a gaming setup, like with a full desktop rig.

Laptops let you game comfortably in a shared space or a small corner while still maintaining top performance. When you're done, simply close the machine and you're done, without a monitor, case, or bulky cables cluttering up the space.

3. No external monitor or peripherals required

Many people like the idea of just opening their laptop, turning it on, and immediately starting to play games. There's no need to fiddle with a monitor, keyboard, or speakers. Everything you need is built into the laptop. At most, you'll just need a good gamepad and a mouse.

Not only does this simplify your gaming experience, it also saves you valuable time. There's no need to deal with the hassle of connecting multiple components or managing a tangled web of cables. Even if you opt for wireless gaming accessories, you still need to charge each component separately, which adds to the hassle and maintenance.

A laptop's built-in screen, keyboard, and speakers mean you have everything you need at your fingertips, meaning less to worry about. In contrast, a full desktop setup often requires multiple peripherals, such as a monitor, keyboard, and more.

4. Better battery life for longer gaming sessions

Unlike a traditional desktop or console, the ROG Strix G16 — or any good gaming laptop — can last for 3-4 hours of gaming on a single charge. This is convenient because it allows you to move around without having to

constantly plug and unplug everything.

The flexibility to play games anytime, anywhere makes the experience that much more enjoyable. Whether you're lounging on the couch, relaxing in the backyard, or visiting a friend's house, a laptop battery ensures that you can enjoy hours of uninterrupted gaming sessions.

5. Customize gaming performance to your liking

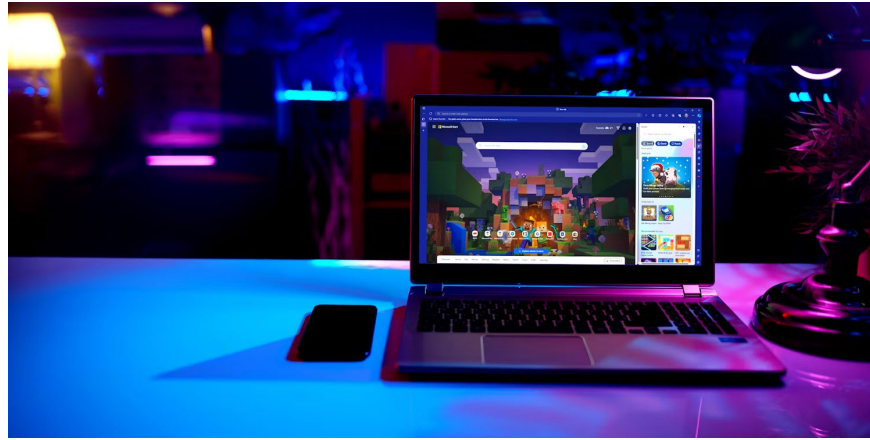

Another reason people love gaming on laptops, especially consoles, is the incredible level of customization it offers for performance. You can tweak graphics settings, tweak resolutions, and even overclock your GPU for better FPS. While you may not be able to do this for every game, having the option to do so is a significant advantage.

Additionally, you can use software like MSI Afterburner to monitor and manage your laptop's performance in real time. The app allows you to monitor laptop temperatures, adjust fan speeds, and manage power consumption.

This level of control ensures that the laptop always performs at its best, whether I'm playing the latest AAA titles or enjoying a quick indie gaming session. It's like having a personalized gaming setup that grows with you, adapting to whatever game you're playing and the performance you need.

6. Flexibility for both work and play

Finally, when it comes to versatility, laptops stand out in ways that handhelds or consoles can't match. A gaming laptop is still a laptop. It's not just a console, it's a tool that helps you do almost everything you need to do.

With a laptop, you get the best of both worlds: A device that runs the latest games with smooth graphics and high frame rates, while also supporting professional endeavors without breaking a sweat. It's a powerful gaming device when you need it, and a powerful tool when tackling tasks—whether it's working on complex spreadsheets, writing a paper, or diving into a creative project.

??????This benefit is even greater for those who use the same computer for work. Instead of investing in separate devices for gaming and work, a laptop can do it all. It eliminates the need for a dedicated console or a high-end workstation, allowing you to enjoy top performance in both areas without breaking the bank.

Gaming laptops have evolved significantly in recent years, becoming more powerful and feature-rich with each new model. The benefits highlighted in this article are some of the main reasons why many people enjoy gaming on laptops. If you are considering buying a gaming device and can't decide, consider the pros and cons of PCs, laptops, and consoles.
