

6 best Bitcoin digging software for Windows, Mac, Linux

If you are planning to dig Bitcoin, you cannot ignore these 11 Bitcoin mining software. Read and choose the right software for you.

What is Bitcoin digging software ?

Bitcoin digging hardware handles actual bitcoin digging, but bitcoin digging software is equally important.

1. If it is a single Bitcoin digger: Mining software will connect your Bitcoin mine to the blockchain.
2. If digging in mining mines (mining pool): the software will connect with mining mines.
3. If digging in the clouds: then you don't need Bitcoin digging software.

The importance of Bitcoin digging software

The main task of the software is to provide hardware work for the rest of the Bitcoin network and get work done from other mines online. Digging Bitcoin software monitors mine inputs and outputs while also displaying statistics such as digging speed, hashrate, fan speed and temperature.

1. Guide to digging Bitcoin for beginners

For Bitcoin

One of the most important things you need before using any kind of Bitcoin mining software is Bitcoin wallet. Because all Bitcoin mining software will require a Bitcoin address to be used to send the rewarded reward and payment. When creating or downloading a Bitcoin wallet, you will be able to get Bitcoin addresses from your wallet.

There are many types of Bitcoin wallets, but these are recommended for beginners:

1. **Ledger Nano S** - Hard Wallet (Hardware Wallet) for all platforms.
2. **Electrum** - Simple Bitcoin e-wallet works on Mac, Windows and Linux.
3. **Mycelium** - The most popular Bitcoin e-wallet on Android.
4. **breadwallet** - The most popular Bitcoin e-wallet for iOS.

If you want to make a lot of money through digging Bitcoin, you should buy a hard wallet. Now that we understand Bitcoin digging software, how it works and you already have Bitcoin wallet and address, let's take a look at mining software on different operating systems.

Best Bitcoin digging software for Windows, Linux, Mac OS X

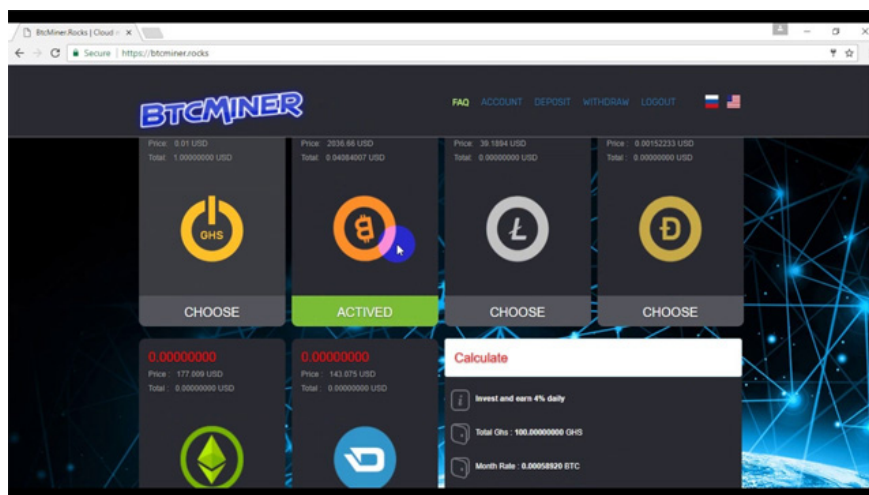

1. Bitcoin Miner (Windows, Mac OS X)

You can use Bitcoin Miner on Windows 10 and Windows 8.1. This software has an easy-to-use interface, battery saving mode, mining mine support and quick sharing.

A useful feature of this software is profit reporting, this feature will help you know whether Bitcoin mining is profitable or not. The latest version of this software is Bitcoin Miner 1.27.0.

2. BTCMiner (Windows, Mac OS X)

BTCMiner is an open source Bitcoin digging software for USB-FPGA ZTEX 1.5 modules.

BTCMiner has the following features:

1. Dynamic frequency scaling technique in BTCMiner automatically selects the frequency with the highest ratio of valid hash function
2. Ready for using Bitstream, ie no Xilinx software or license required.

It also comes with FPGA control panel that contains a USB interface used for communication and programming.

3. CGMiner (Windows, Linux, Mac OS X)

CGMiner is arguably the most popular software and is used by many Bitcoin miners at this time. CGMiner is based on the source code of CPU Miner.

This software has many features but the main features include:

1. Control fan speed
2. Remote interface capability
3. Self-discovery of new blocks with small databases
4. Support multiple GPUs
5. Support CPU exploitation

4. BFGMiner (Windows, Linux, Mac OS X)

BFGMiner has many features similar to CGMiner software. The only big difference is that it does not focus on GPUs like CGMiner but instead is specifically designed for ASIC.

Some unique features of BFGMiner include: Bitcoin mining with free OpenCL mesa / LLVM, ADL device rearrangement according to PCI bus ID, integrated overclocking and fan control.

5. EasyMiner (Windows, Linux, Mac OS X)

EasyMiner is GUI-based software and it works as a convenient wrapper for CGMiner and BFGMiner software. This software supports the getwork exploitation protocol as well as stratum mining protocol. It can also be used for individual mining and mining in mining lakes.

Among the main features, it configures the mines and provides performance charts to easily visualize Bitcoin mining operations.

6. RPC Miner (Mac OS X)

RPC Miner can be used on Mac OS 10.6 and above and integrates features with Mac OS API and systems.
