

## 6 great browsers for Android devices

The default browser on Android called 'Internet' is a very simple browser included with Android OS. Meanwhile, there are browsers from third-party vendors that have a more robust interface, great configuration and are updated more often.

**TipsMake.com - The default browser on Android called ' *Internet* ' is a very simple browser that comes with Android OS. Meanwhile, there are browsers from third-party vendors that have a more robust interface, great configuration and are updated more often.**

### Firefox

If you use *Firefox* on your PC, you will want to see *Firefox* on your Android device. The *Firefox Sync* feature allows users to access bookmarks, browsing history and even open multiple tabs on mobile devices such as desktops. It also supports *mobile add-ons* .

 Enter Search or Address 

**Firefox Start** 

Your tabs from last time

No tabs from last time

 Tabs from your other computers

 Add-ons for your Firefox >

Change Language

Give Feedback      Get Help

[Set Up Sync](#)

The *tab bar* is on the left and the *navigation bar* is on the right.

Due to some users complaining that using *Firefox* on Android is slow, recent developers have turned *Firefox* to use Android's own *widgets* and found that the speed has increased significantly. However, this feature has not made *Firefox* a stable version on Android.

## Chrome Beta

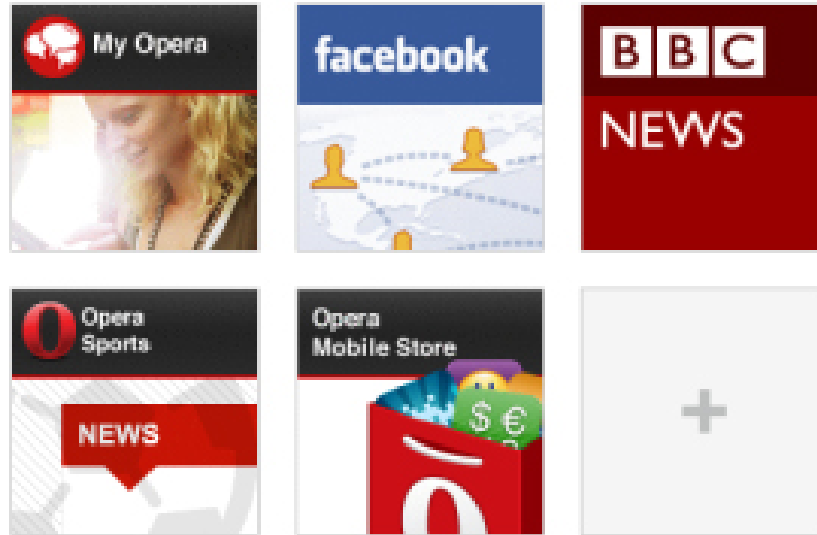

Like *Firefox* on Android, *Android Chrome* is designed to do the same thing as the Chrome browser on PC. It also syncs with Chrome so it is a perfect copy on the mobile device of the *Chrome* version on the desktop. Unfortunately, *Chrome Beta* is currently only available on *Android 4.0, Ice Cream Sandwich*, while most Android devices currently do not run *Android 4*.

*Chrome* on Android supports unlimited card opening and *incognito mode* ( *incognito mode* ). Users can also submit the site from the desktop version of Chrome to the Android version with a single click.

## **Opera Mobile and Opera Mini**

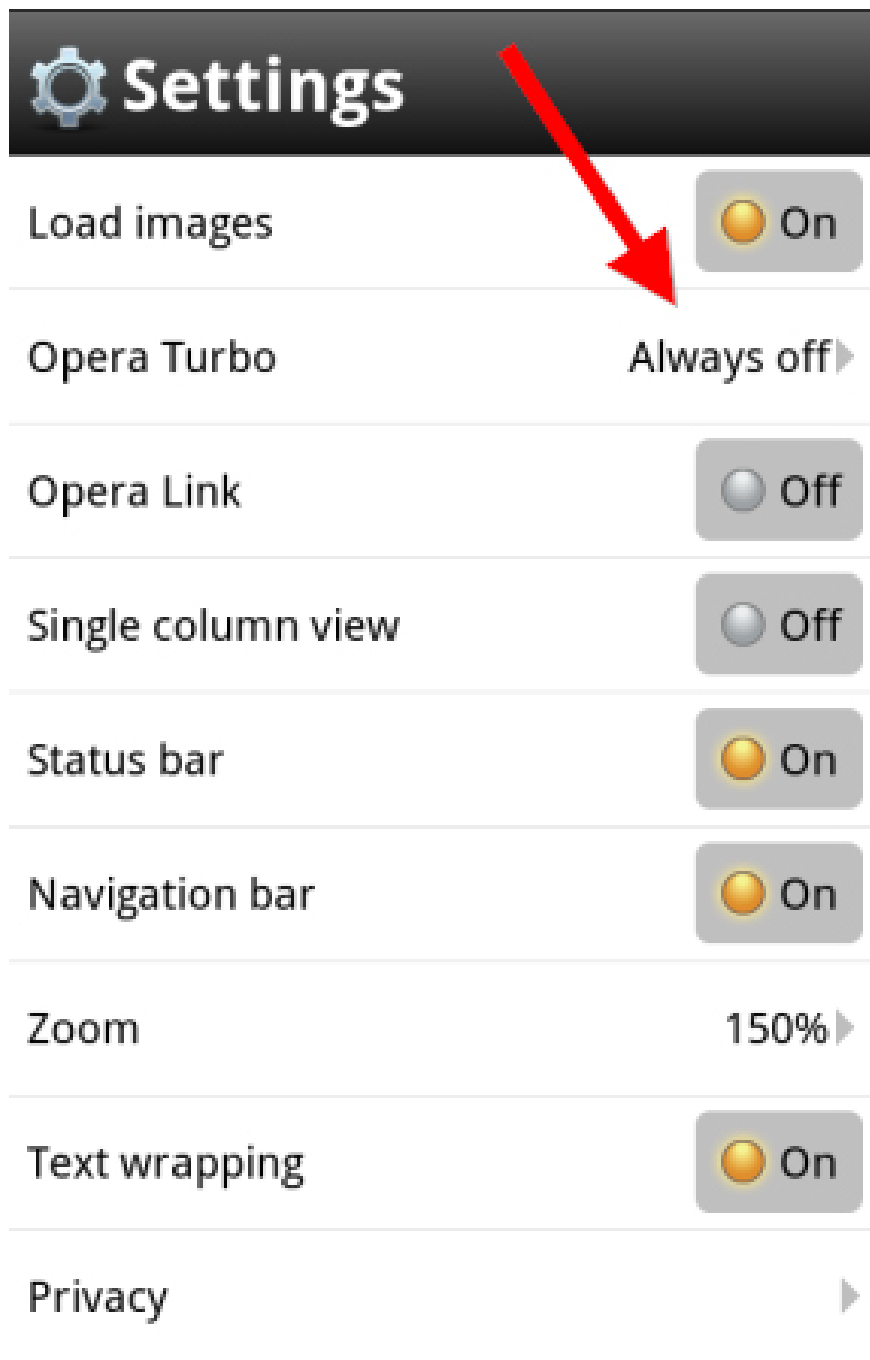

*Opera Mobile* and *Opera Mini* are two separate applications. *Opera Mobile* is a complete browser, like other browsers in this article.

Manage

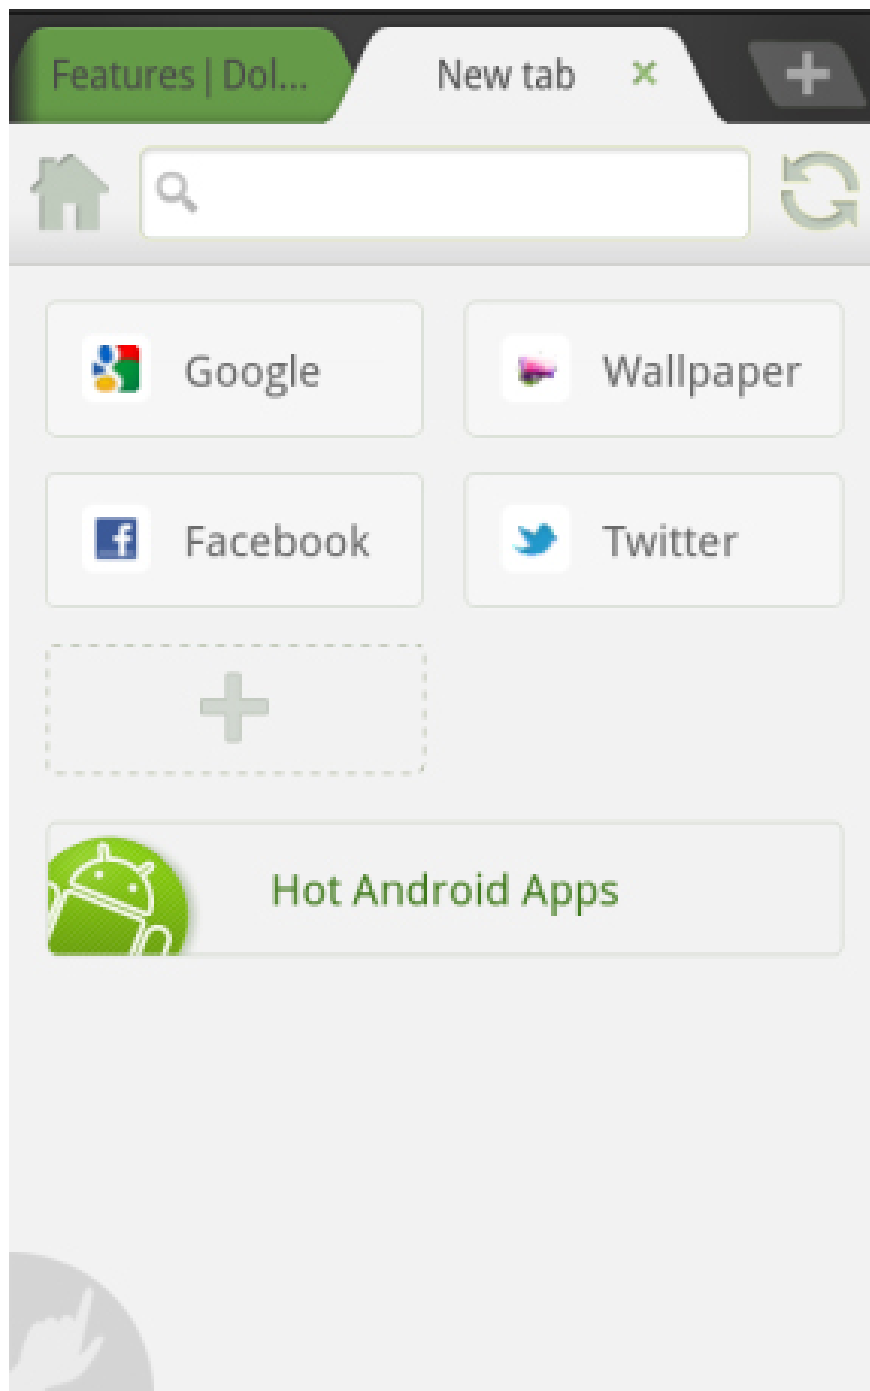

Meanwhile, *Opera Mini* sends you access to *Opera* 's server first, where they are compressed before being sent back to the user. This greatly reduces mobile data to use. *Opera Mobile* also provides compression as an option for users. It's called '*Opera Turbo* ', but this feature is disabled by default.

*Opera* users on desktops can also enable *Opera Link* on the setup screen to sync browser data with *Opera* on Android.

## **Dolphin Browser HD**

*Dolphin HD* is the most popular browser on *Google Play Store* . It adds a wide variety of features not included in the default browser including gestures, add-ons, browser tags, speed dials, sidebar and voice control. *Dolphin Connect* feature allows you to synchronize browser data on devices.

Users can browse the list of utilities available on *Google Play Store* .

## Boat Browser

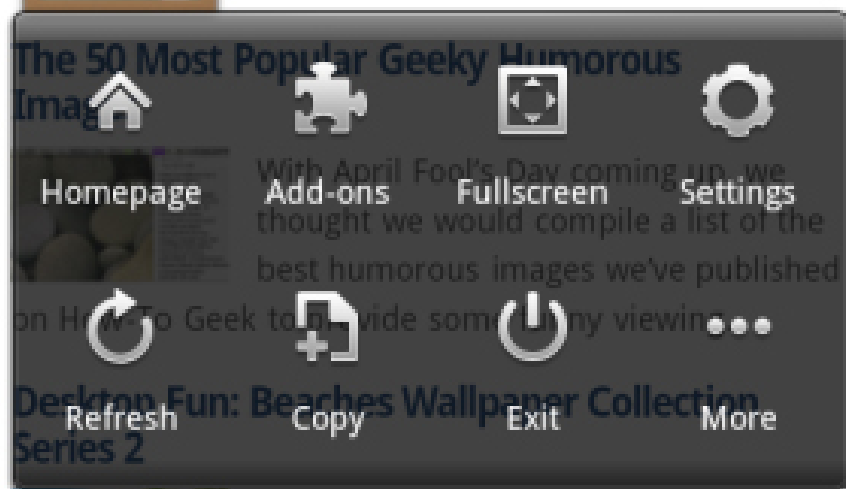

*Boat Browser* seems to be a combination of Google Chrome's *top bar* and the *Mobile Safari* navigation bar. So the browser looks very smooth.

## Geek Trivia: What Was The First Computer Generated TV Show?

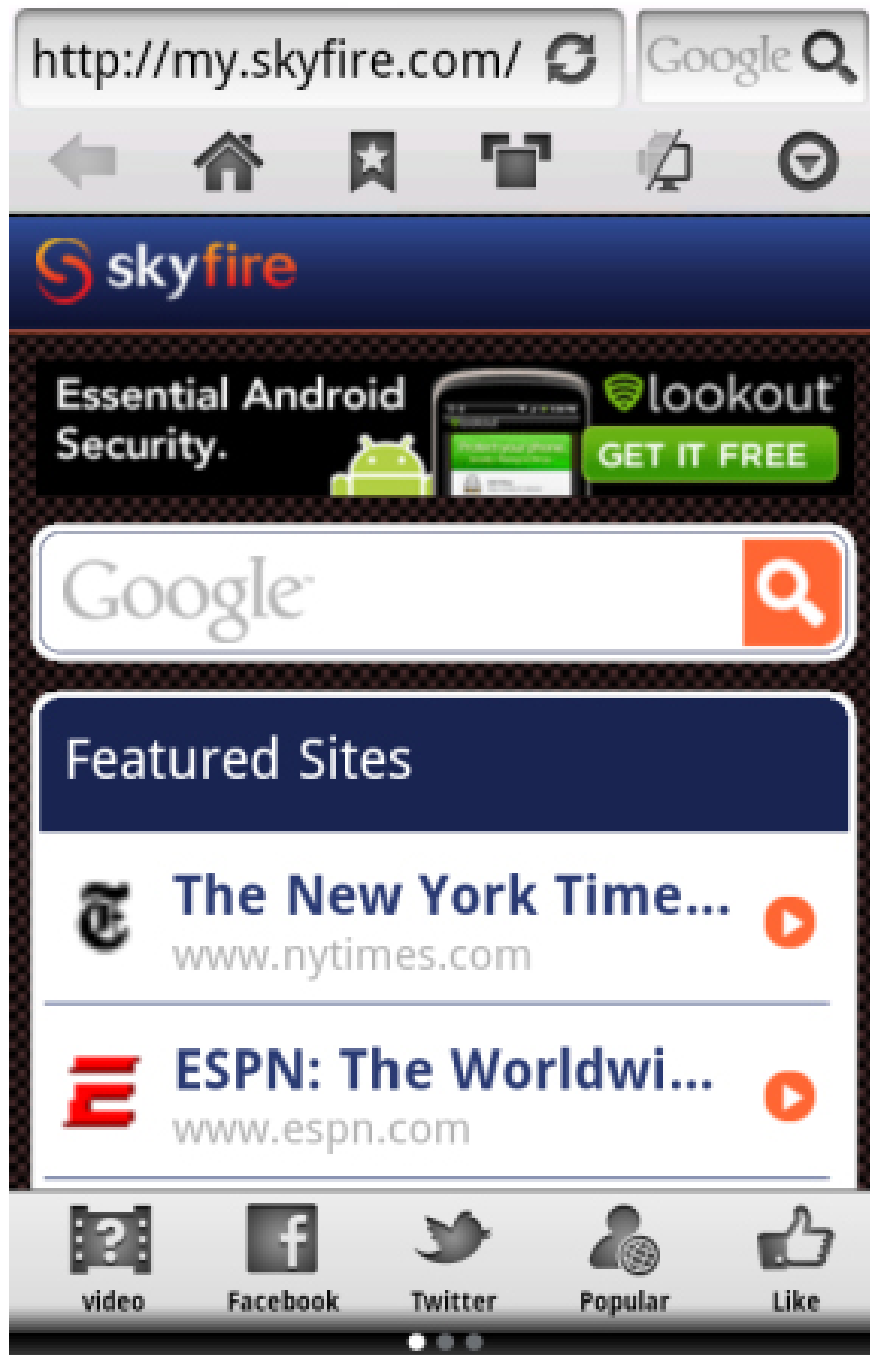

Think you know the answer?

In addition to the beautiful interface, it also offers many features such as voice commands, utilities (only a few at this time), custom toolbar, speed dial and many other options.

## Skyfire

*Skyfire* focuses on social networking more. The browser has many features integrated for users of social networks like *Facebook* and *Twitter*. *Facebook*'s 'Like' button allows you to 'like' any site and the 'Popular' button shows you popular *Facebook* pages. If you are a regular customer of social networking services, *Skyfire* is the most suitable browser for you.

The above are 6 ideal browsers to replace the default Android browser. In addition, there are some other well-known browsers like *Maxthon* or *Miren* . Hopefully, through this article you will find the most suitable browser for your Android device.
