

6 hidden tricks that can be applied to Samsung cameras

People used to rely on separate apps just to scan QR codes. Then one day they opened their Samsung camera and saw it highlight a link as soon as they pointed the camera at it.

People used to rely on separate apps just to scan QR codes . Then one day, they opened their Samsung camera and saw that it highlighted a link as soon as they pointed it at it. It was subtle, but enough to make many people wonder what else the camera could do.

6. Record video without turning off the music

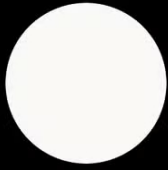

Most phones will turn off the music as soon as you start recording a video, but Samsung phones don't have that limitation. If you're listening to a song from Spotify or YouTube Music , open the **Camera** app , switch to **Video** mode , and tap the record button. The music will continue playing in the background, and your phone will record both the video and the surrounding audio.

To do this, however, you'll first need to enable a quick setting. Open Camera and tap the gear icon to access settings. In Settings, scroll down to **Advanced video options** and turn on **Audio playback** .

Advanced video options

General

Tracking auto focus

Keep the rear camera focused on the selected subject even if they move.

Composition guide

Grid lines and level

Location tags

Add tags to your pictures and videos so you can see where they were taken.

< Advanced video options

 H.264 (most compatible)

High bitrate videos

Increase the bitrate of videos recorded in Video and Pro video modes. High bitrate videos are usually larger than normal videos.

HDR

Capture a wider range of colour and contrast by recording in 10-bit HDR, which is compatible with most apps and devices.

Log

Audio

Zoom-in mic

Match the mic zoom to the camera zoom while recording in Video mode.

360 audio recording

Capture immersive 3D sound through your Bluetooth headphones with 360 audio recording.

Audio playback

Allow music and other audio to play while you record. Playback will pause when using a 360 audio recording or a Bluetooth mic.

5. Automatic document capture - No touch required

To enable this feature, open the Camera app, tap the gear icon, and turn on **Scan documents and text** . Then tap that icon and turn on **Auto scan** , which lets your phone take a photo as soon as it detects a stable frame.

< Scan documents and text

On

Show a button to scan documents and text detected with the rear camera.

Auto scan

Automatically capture documents and text without pressing the Shutter button.

Remove unwanted objects

Automatically remove fingers from the frame when scanning documents.

You can also turn on **Remove unwanted objects** to cut out any obstructions, like fingers near the edge. Then all you have to do is point the camera at the subject and let it do the rest.

4. Turn the shutter button into a GIF maker

To enable this feature, open the Camera app, tap the gear icon, then scroll down to **Pictures** . Tap **Swipe Shutter button to** , which is set to **Take burst shot** by default . Switch to **Create GIF** and you're done.

< Swipe Shutter button to

Choose what happens when you swipe the Shutter button down and hold in Photo mode.

Take burst shot

Create GIF

Now, when you're in **Photo** mode , slide and hold the shutter button down. Your phone will take multiple photos in quick succession and automatically combine them into a short, looping GIF . This works great for reactions, playful expressions, or anything that moves. Once saved, you can share it right away without having to convert.

3. Let the camera optimize your photos for you!

To enable this feature, open the Camera settings and navigate to **Intelligent optimisation** . From there, turn on **Scene Optimizer** .

Maximum

Medium
Speed up capture time by doing less optimisation.

Minimum
Take pictures as fast as possible by not optimising pictures after they're taken.

This setting only affects Photo mode.

Scene optimiser

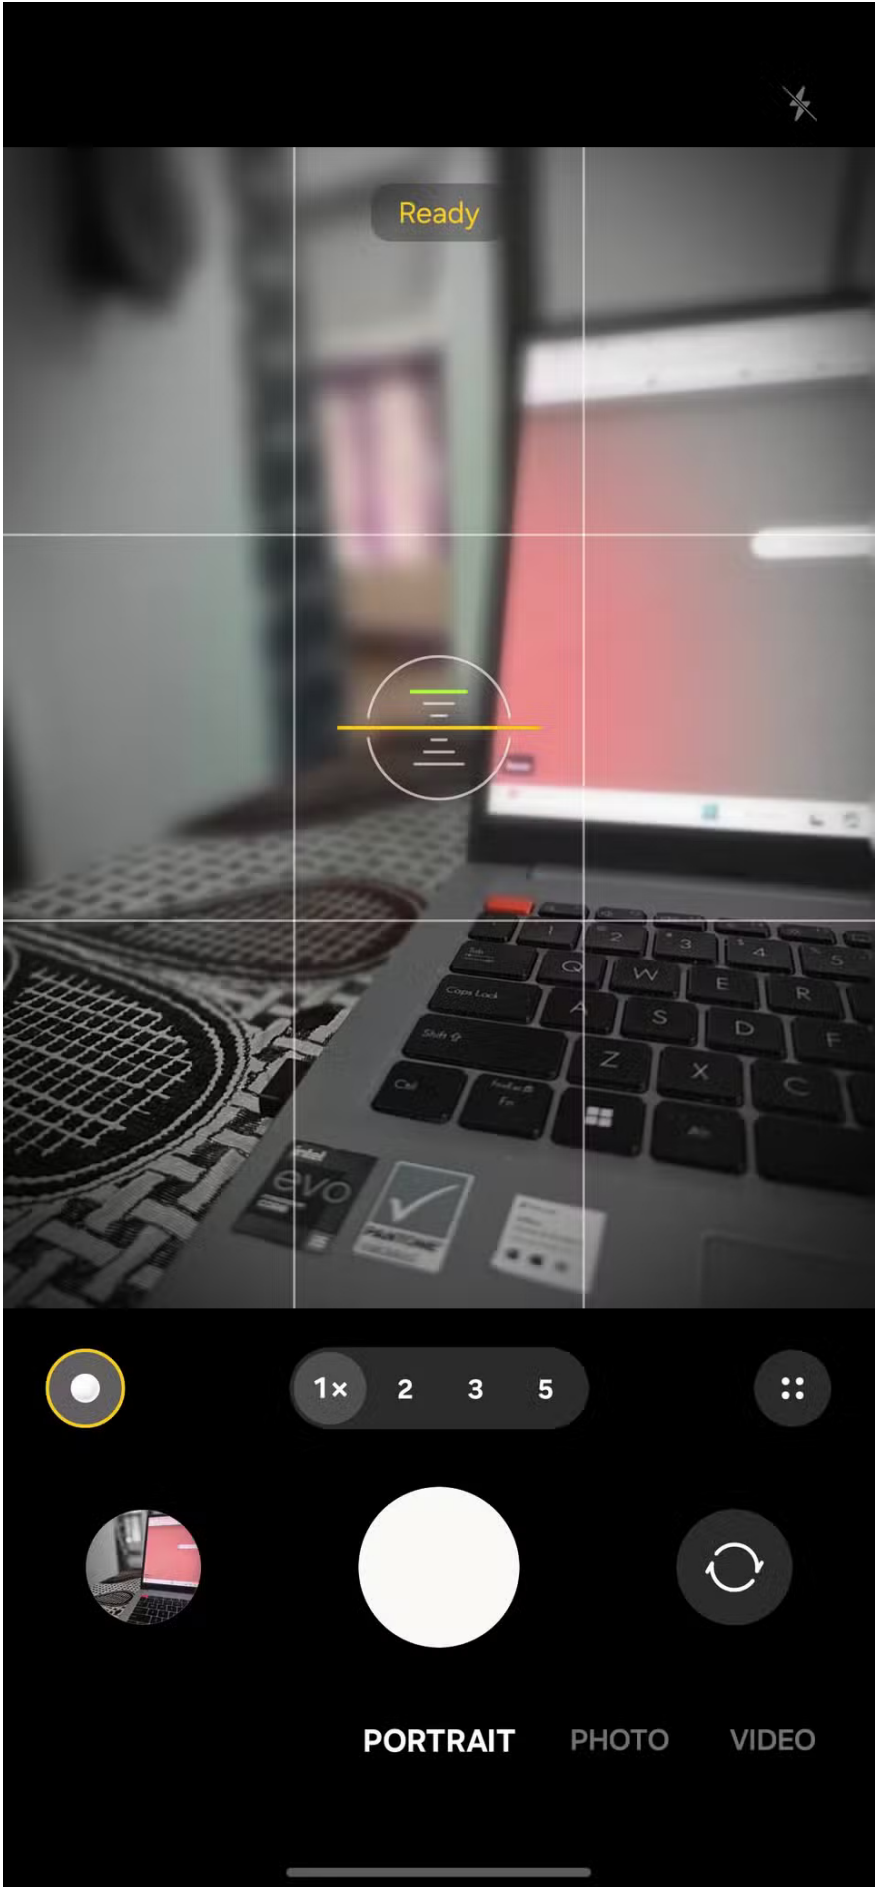

Automatically optimise the colour and contrast of pictures to make dark scenes look brighter, food look tastier, and landscapes look more vivid.

Once turned on, the camera recognizes the scene in real time and applies subtle adjustments to enhance the final result without you having to move a finger.

2. Highlight portraits with Color Point

To try this feature, open the Camera app and switch to **Portrait** mode . Tap the **Effects** icon to the left of the zoom controls, then select **COLOR POINT** from the list of filters.
