

6 photo editing software using Artificial Intelligence to 'elevate' your image

This new technology changes the look of your image through algorithms based on machine learning and neural networks inspired by brainwave activity, using object identification to completely recreate an image. photos, not just adding a filter layer like old applications.

Did you know that adding filters to images is gradually 'outdated'? Recently, developers have succeeded in creating a new type of artificial intelligence that provides the power for photo editing applications, helping you produce transformative images and videos in a variety of styles.

These applications will "mold" your original file into the most impressive new school art works of famous artists like Picasso Munch, Van Gogh . or directly from a work Specifically. Artificial intelligence in these applications reacts to each individual image based on its content to create unique "masterpieces".

This new technology changes the look of your image through algorithms based on machine learning and neural networks inspired by brainwave activity. The neural network uses object identification to completely recreate an image, not just adding a filter layer like old applications.

Quantrimang would like to introduce below some 'cool' editing apps - where AI will help you create artworks as mentioned above. Let's try this picture of this lovely dog!

Old photo editing applications use AI

1. Prisma (iOS and Android)

Prisma is an amazing photo-editing photo editor app that turns your photo into a painting with art by famous artists like Van Gogh, Picasso, Salvador Dali, Lichtenstein .

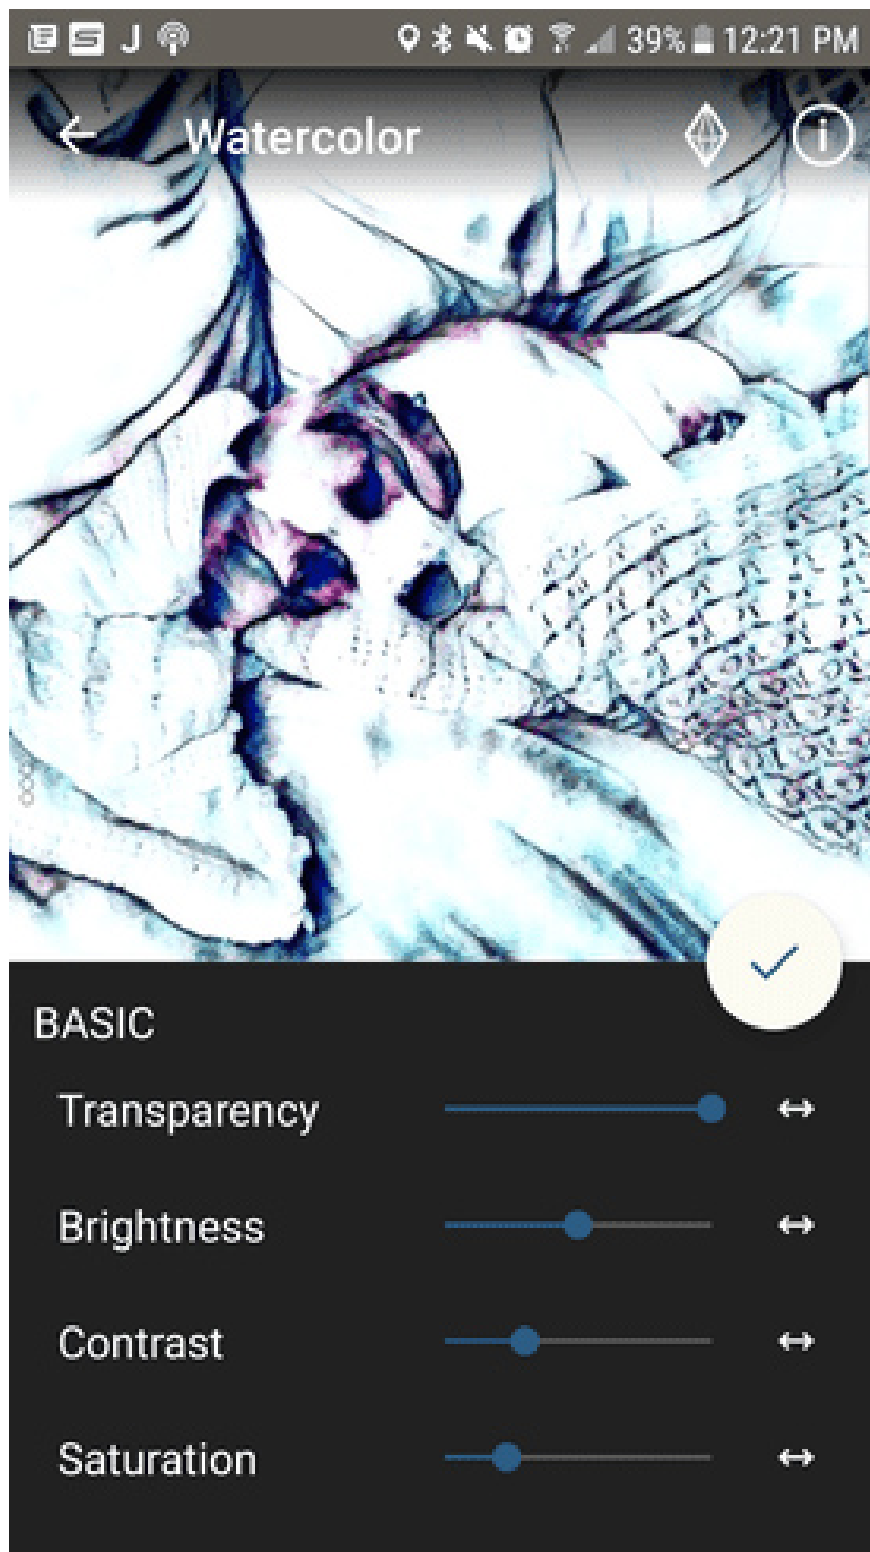

This application uses Convolutional Neural Network (CNN) designed to simulate the human brain. CNNs teach deep learning algorithms how to detect and identify objects in images. This process applies different preset interfaces, responding to the pixel configuration in your image and creating a whole new image.

Download a new image with 100% intensity, but you can adjust it in your final image and see the changes using the split view of the image.

2. Paintt (Windows, Mac, iOS and Android)

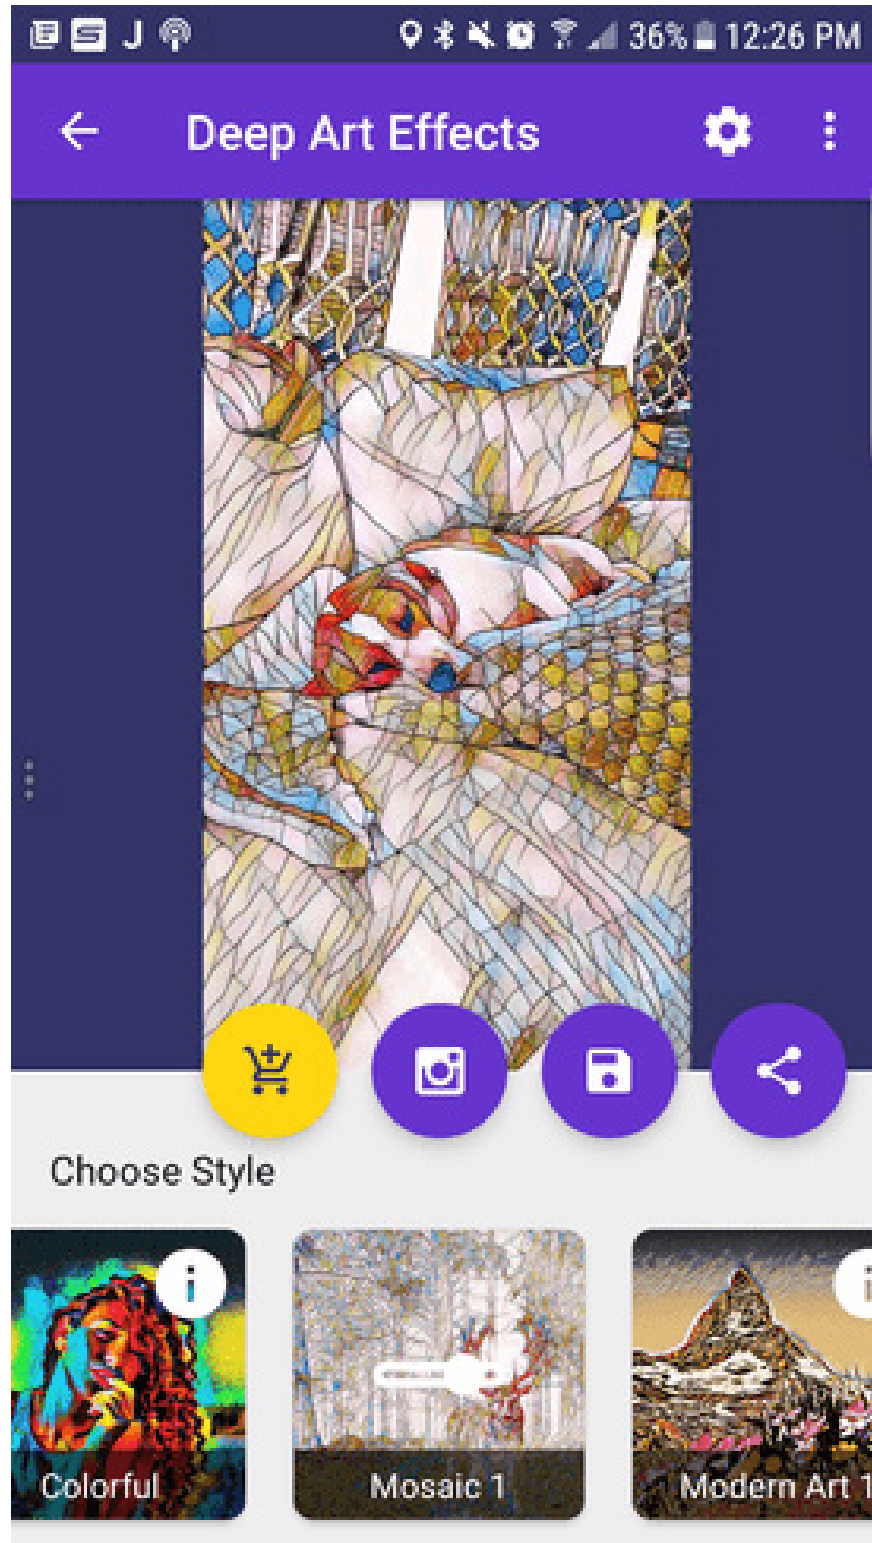

Paintt application not only converts your images to predefined art styles but also offers a lot of different tools for you to edit in your own way.

There are over a hundred different styles to choose from, grouped into seven categories to make searching easier. Each photo filter has a custom tool such as contrast, brightness, warmth, . to help you create colorful artistic images. You can choose a new frame rate and download it in small, medium, large or original resolution.

3. DeepArt (Windows, Mac, Linux, iOS and Android)

DeepArt uses the original algorithm to blend the artistic style elements of an image to reproduce the content of another image. To create a new image, upload the image you want to edit and choose among eighteen styles available in the app. You can even select another image and mix them together.

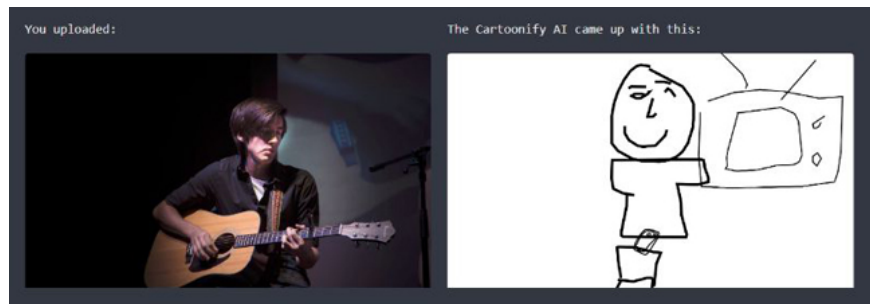

New photo editing application using AI

New image editing applications that support AI will go beyond creating pre-defined style files. These applications try to 'learn' to view photos in human ways and create images based on how AI perceives the photo.

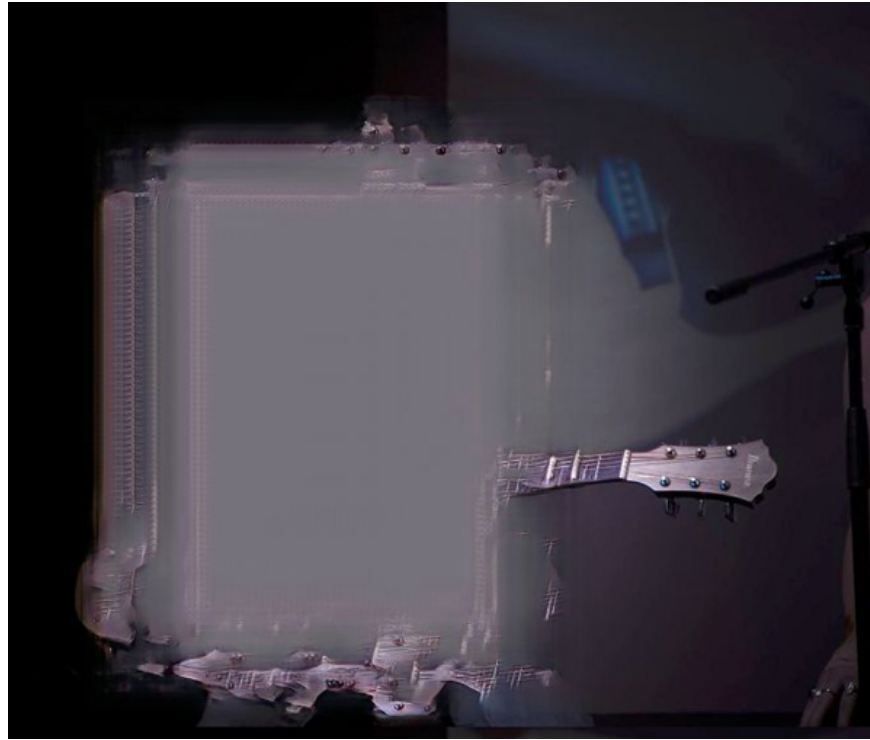

4. Cartoonify (Web)

Cartoonify application works like an artist robot, they will "observe" your image and redraw what they see. This application will analyze the image and create a rough sketch of what it thinks is in the original photos. The results from the application prove that this technology will have a long way to go because the output really looks very similar to what a 5 year old kid draws. But anyway it's quite interesting to try 'naughty' with an artificial intelligence application right near us.

5. DeepAngel (Web)

DeepAngel uses AI artificial intelligence to remove some objects from your image. However, the ability of the application is still limited because only a few objects such as people, animals, cars or other everyday objects can be deleted.

To use DeepAngel, you can upload an image or use a live Instagram link. Then select the object you want to remove. This application is still in the early stages and continues to test, but it can also give useful results with some projects.

6. GoArt by Fotor (Web, iOS & Android)

GoArt by Fotor is a new and faster application, turning your photos into images based on the style of famous artists, similar to the above mentioned applications. GoArt's speed is more outstanding than previous apps, allowing you to try many styles in a short time, especially on the web. However, to use the full mode, you must have Fotor's account and unlock it, so your images will be more strange and unique.

In general, the use of AI in applications can be considered artistic such as creating and editing images, there is still a long way to go, but these apps show some progress that the AI ??has achieved. been for many years. What do you think? Try getting used to artificial intelligence by trying to tinker with these applications!
