

6 self-destruct chat apps on the phone

The self-destruct chat feature on chat applications helps users secure chat content.

The self-destruct chat feature has now been provided in many chat applications, helping users secure more chat content such as images and certain personal information. The message is set to automatically cancel time after being opened. After the auto-delete message will not be able to open the content as before. Besides this auto-cancel chat feature, some apps also add features to create security keys on Zalo, for example, to increase security for chat conversations. The following article will summarize applications with automatic chat features on Android and iOS.

1. How to send SMS from computer
2. How to message Zalo at the same time for many people
3. How to schedule sending messages on iPhone
4. How to send Messenger messages to many people

Summary of automatic canceling messaging applications

1. Facebook Messenger

The Messenger chat application currently provides automatic cancellation messages for individual or group chat Messenger on both Android and iOS versions, called the Secret Conversation feature. The person who sent the secret message will be allowed to choose the time period when the message will automatically cancel as soon as the message is opened. When the set time is reached, the message will be deleted from the conversation view and the message review cannot be opened again. In the secret conversation there will be a black padlock icon as shown below.

How to send a secret message in Messenger, read reference in [How to send a self-destructive, private message on Facebook Messenger](#).
