

7 Apple Intelligence features on iPhone you should use

Apple Intelligence powers a wide range of apps to enhance your experience. Here are the Apple Intelligence features on iPhone you should use.

The Apple Intelligence feature has now been updated to the latest iOS 18 beta for users to experience this smart technology.

1. Record calls on iPhone

You can now record calls on iPhone through the Apple Intelligence feature. All recordings are saved in the Notes app with detailed recording time and recording duration.

In addition, this feature also supports creating a summary for calls on iPhone.

2. Write with AI tools

You can use this AI writing tool to write messages, write notes or compose emails. The tool offers style options ranging from friendly to professional. Or you can use it to condense the content, write to the point, and avoid clutter.

3. Use AI in the iPhone Mail app

AI technology when used in the Mail application brings many extremely effective features, from summarizing email content to classifying priority and more important emails for users to read immediately.

In addition, we also have the ability to quickly reply to an email to save our time.

4. New focus mode on iPhone

The new Reduce Interruptions focus mode only shows notifications that need immediate attention. For example, when there is a notification about a message to go out to eat or watch a movie, you will not be disturbed, but messages about accounts and passwords will be converted to important messages and send you a warning.

5. Advanced photo search

With this AI technology, users will have many ways to search for images in albums. For example, we can search for photos taken with other people, or search for photos and videos of people performing a certain action.

There's also a new feature in the Photos app called Memories. You can tell Apple Intelligence what memories you want to recall, and it will combine photos and videos to create a movie with auto-synthesizing titles and music.

6. New changes to Siri

After being upgraded with AI technology, you can ask Siri with more effort and also receive clear responses for each problem. Besides, Siri also guides you through some operations such as reinstalling iPhone, turning on dark mode on iPhone without searching on the website.

7. Summary of Safari website content

Another small but quite useful AI feature is the summary feature in the Safari browser. Through this summary feature, you can easily get the main idea of the article's content and quickly understand what information the article wants to convey through the summary content.

iPhone 16 rumors: Everything you need to know about the new iPhone

Summary

The iPhone 16 series is expected to launch in September 2024 with a range of upgrades, including a redesigned camera block, Action button, and larger screens on the Pro models. Rumors suggest that all models will receive a 48MP main camera, while the Pro models may feature an upgraded ultrawide camera and support for spatial video. The iPhone 16 Pro models may also boast a larger battery, Wi-Fi 7 support, and a more powerful A18 chip.
