

## 7 best desktop speakers you should buy

Today, integrated speakers are popular in both laptops and computer monitors. But no matter how expensive a laptop or monitor is, this built-in speaker rarely gives good sound quality.

Today, integrated speakers are popular in both laptops and computer monitors. But no matter how expensive a laptop or monitor is, this built-in speaker rarely gives good sound quality.

A set of desktop speakers will be better, because they are not constrained by space limitations in a laptop or monitor. This extra space allows them to include amplified components, which are important for producing high quality sound. But good desktop speakers are not cheap!

In this article, you will find some desktop speaker suggestions so that you have the best product in the price range, the sound quality priority is more cost-effective.

### 7 best desktop speakers you should buy

1. Audioengine A5 +
2. Edifier R2000DB
3. Logitech Z623
4. Klipsch ProMedia 2.1
5. Bose Companion 2 Series III
6. KRK RP5 G3
7. Mackie CR4BT

#### 1. Audioengine A5 +

1. Price: \$ 399 (VND 9,314,000)
2. Subwoofer size: 5 inches
3. Frequency response: 50Hz to 22KHz
4. Peak power: 150W
5. Input type: 3.5mm Stereo, RCA
6. Weight: 25 lbs / 11.3 kg (left speaker 15.4 lbs / 7 kg, speaker must be 9.6 lbs / 4.3 kg)

The Audioengine A5 + is the most expensive option on this list and it is definitely worth the money you spend.

Do you expect a greater frequency range when paying such large amounts? Sure. But the Audioengine A5 + delivers an amazing level of quality to the point where a large frequency range is no longer completely important. The bass (bass) is great but does not overwhelm everything else, and the treble sound is very different without being jarring.

It comes with a 3.5 mm stereo cable, an RCA cable, and a power cord (can also use USB if you want). The included remote control is a huge plus. Audioengine A5 + will give you extremely good sound quality in all cases, including gaming and multimedia playback.

## **2. Edifier R2000DB**

1. Price: \$ 250 (VND 5,836,000)
2. Subwoofer size: 5 inches
3. Frequency response: 55Hz to 20KHz
4. Peak power: 120W
5. Input type: Bluetooth, RCA, optical signal
6. Weight: 23 lbs (10.5 kg)

Edifier R2000DB is a folding option right after the Audioengine A5 +. Edifier R2000DB is only slightly worse than the Audioengine A5 + in most respects, but the price is more affordable. In fact, unless you're a really smart person, you won't even notice the difference even though you listen to it every day.

It produces good, clear sound throughout the frequency range, but is best at mid-range, making it a good choice in a multitude of options available on the market. Bluetooth and optical connectivity are also very convenient.

### **3. Logitech Z623**

1. Price: \$ 120 (VND 2,800,000)
2. Subwoofer size: 7 inches
3. Frequency response: 20Hz to 20KHz
4. Peak power: 200W
5. Input type: 3.5mm Stereo, RCA
6. Weight: 19.7 lbs / 9kg (15.4 lbs / 7kg subwoofer, left speaker 2.1 lbs / 1kg, speaker must be 2.2 lbs / 1kg)

Logitech is one of the best product manufacturers of all time, and the Logitech Z623 is an affordable, high quality product line for ordinary home users. With an RCA and two 3.5 mm jacks, you can listen up to three devices.

Although the Z623 is a mid-range speaker for many purposes, the 7-inch bass driver can really boost bass when needed. You will not find any better products at this price.

Two alternative models are also available. A model with a Bluetooth adapter and a model with optical inputs. Unfortunately, you cannot use the Z623 with 3.5mm input, RCA, Bluetooth and optical signals.

## **4. Klipsch ProMedia 2.1**

1. Price: \$ 169 (VND 3,945,000)
2. Subwoofer size: 6.5 inches
3. Frequency response: 31Hz to 20KHz
4. Peak power: 200W
5. Input type: 3.5mm Stereo
6. Weight: 15.2 lbs / 6.9kg (11 lbs / 5kg subwoofer, left speaker 2.1 lbs / 0.95kg, speaker 2.1 lbs / 0.95kg)

Released back in 2000, Klipsch ProMedia 2.1 is one of the first THX-certified desktop speakers, meaning it can deliver the same sound quality as home theater systems. This is the first choice for those who love broadcasting TV shows and movies.

Although the frequency range is quite narrow, sound reproduction is very good. Don't let the fact that this speaker model has existed for nearly two decades that you hesitate. It is still a very good choice.

## 5. Bose Companion 2 Series III

1. Price: \$ 99 (VND 2,310,000)
2. Subwoofer size: Not applicable
3. Frequency response: Not applicable
4. Peak power: 22W

5. Input type: 3.5mm Stereo
6. Weight: 4.1 lbs / 1.9kg (left speaker 1.8 lbs / 0.9kg, speaker must be 2.3 lbs / 1kg)

If you want a set of top quality speakers and easy to use, consider Bose Companion 2 Series III. Weighing just over 4 pounds, it is obviously the most 'portable' option on this list. Of course, that's because it lacks a subwoofer, but don't let that make you hesitate.

For such compact speakers, the Bose Audio Companion 2 Series III sound is really impressive, especially the width of the bass frequency. Although the sound quality decreased a bit in the higher treble tones, it was still much more comfortable than most other computer speakers.

It is one of the best computer speakers at a price of under \$ 100.

## 6. KRK RP5 G3

1. Price: \$ 275 (VND 6,420,000)
2. Subwoofer size: 5 inches
3. Frequency response: 45Hz to 35KHz
4. Peak power: 100W
5. Input type: Stereo 6.35mm, RCA, XLR
6. Weight: 14.1 lbs (6.4kg)

KRK RP5 G3 boasts an amazing frequency range, especially at the above frequencies, the sound quality is still clear and not distorted on most of that range. It has three rear buttons, including a high frequency adjustment button (already existing on G2 RP5), a low frequency adjustment button (this is a new feature) and a volume

control button.

While you can use the KRK RP5 G3 with a computer, the RP5 series is also known for its fidelity to mixing sounds, making it the top choice for DJs and musicians. You can rest assured knowing that you will have great sound quality with these advantages.

## 7. Mackie CR4BT

1. Price: \$ 170 (VND 3,970,000)
2. Subwoofer size: 4 inches
3. Frequency response: 70Hz to 20KHz
4. Peak power: 50W
5. Input type: Bluetooth, stereo 3.5 mm, 6.35mm stereo, RCA
6. Weight: 12 lbs (5.4kg)

One thing to note about Mackie CR4BT is to meet its lowest bass frequency of 70Hz and bass driver of only 4 inches. Both are not found in other speakers in this price range. They sound pretty good.

The advantages of Mackie CR4BT are excellent bass and treble, many popular input types and light weight. Its main drawback is distorted bass (people with crystal ears will definitely realize this).

If the price of Mackie CR4BT is too high, consider taking Mackie CR3 instead. It has a tighter frequency range starting at 80Hz and lacks Bluetooth connectivity, but in return the price is reduced by almost half and the sound is nearly as good as Mackie CR4BT.

You have a lot of options and any option on this list will not make you regret it. Good quality speakers are also important for Mac audio quality as well as for Windows. Although the built-in iMac speaker is not bad, it still can't be compared to external speakers.

If you are looking to replace your old speakers, consider reviewing this list to choose the right product!

Wish you can choose a good speaker!
