

# 7 best drag and drop website builders of 2023

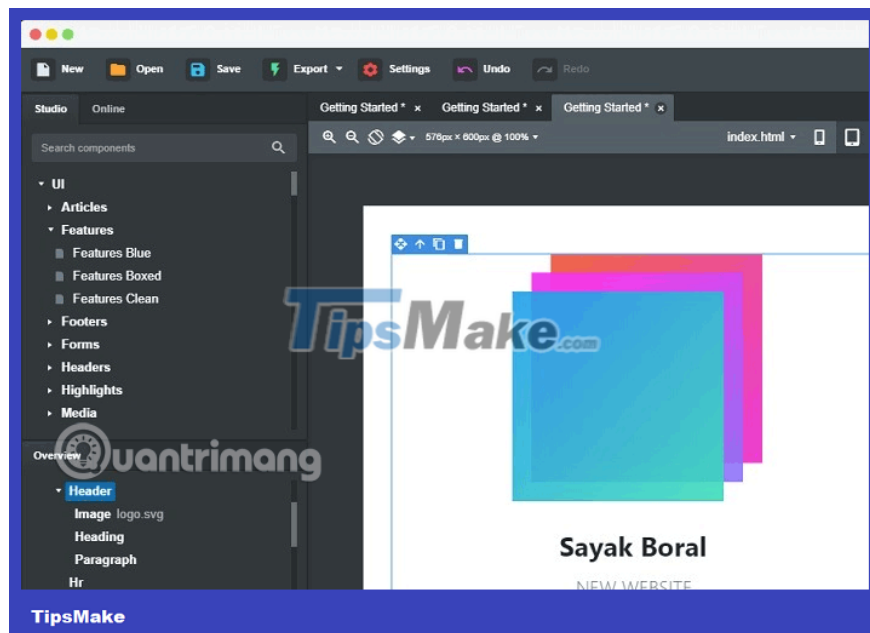

If you need to create a website but don't have web design skills, you may want to look into drag-and-drop website builders.

If you need to create a website but don't have web design skills, you may want to look into drag-and-drop website builders.

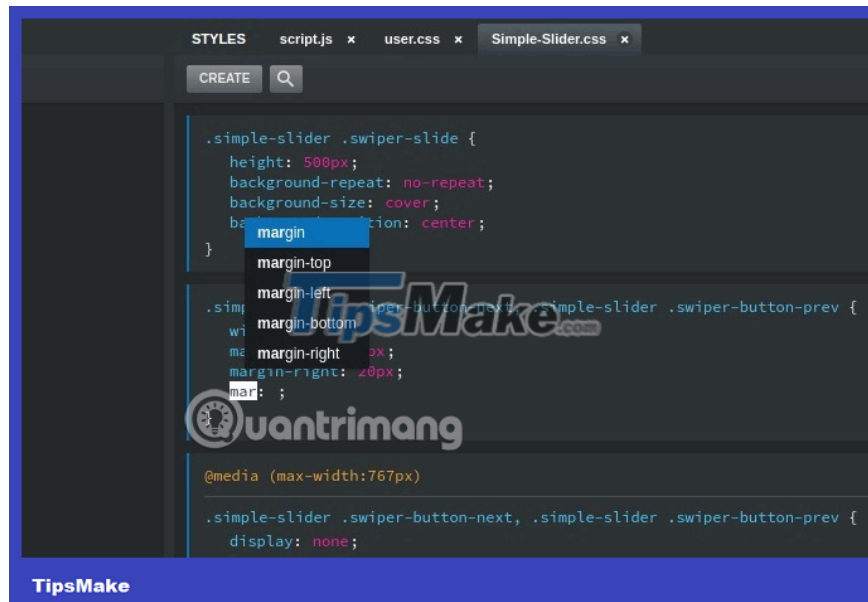

Listed below are the best drag and drop website builders of 2023. You won't see any lines of code here, but the designs are still elegant and professional. Whether you want to transfer a domain name or add a blog, you can do it easily with these tools.

## 1. Bootstrapstudio.io

This revolutionary tool is attracting a lot of attention. Through an online browser demo, you can get hands-on with its best features.

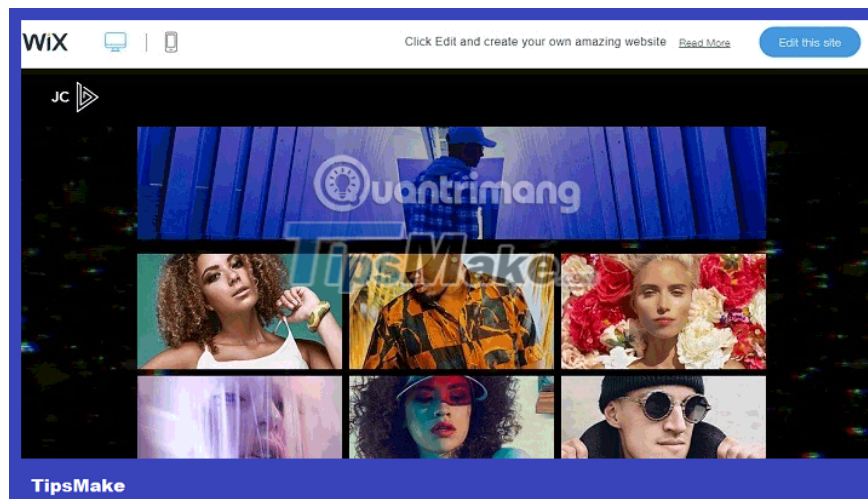

Like other drag-and-drop website builders, Bootstrap Studio has responsive design templates that can be manipulated with text, images, and videos. You can access components created by a collaborative community in the online library.

Of course, sometimes you need more than drag and drop. For completeness, Bootstrap Studio has an outstanding text editor that supports CSS, SASS, JavaScript, and HTML.

## 2. Wix.com

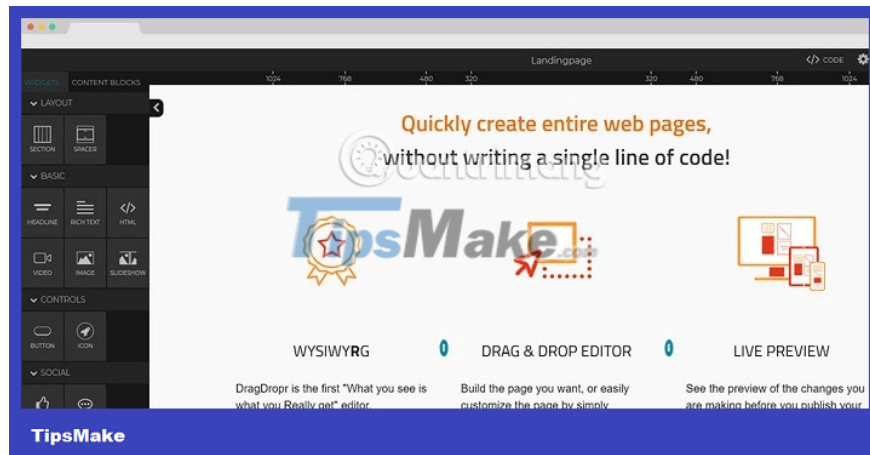

If you like high-quality graphics and parallax themes, you don't need to look any further than Wix. This tool has stunning website templates that will leave you and your website visitors spellbound with great ideas.

Wix also uses artificial intelligence features called Wix ADI (Artificial Design Intelligence). It uses an algorithm from your answers to many questions to help create the website exactly what you imagined.

## 3. Dragdropr.com

Many websites are actually slow due to CMS performance issues. Need a CMS solution that can support WordPress, Drupal, Magento or any other extension? Consider DragDrop.

DragDropr is a responsive web design tool and a great improvement on WYSIWYG (What You See Is What You Get) editors. It has over 200 assets to choose from and responsive sliders that can scale to any screen size. This is truly one of the best tools on the market.

## 4. Weebly.com

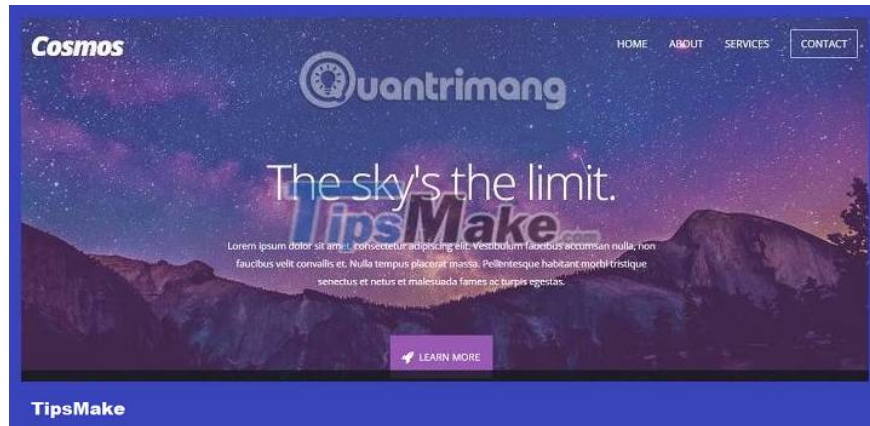

Weebly started out as a completely free website builder that supported a domain name under the Weebly brand. Now it has become a major website builder popular with e-commerce stores.

For a reasonable price of 5 USD a month, you can work with Facebook ads and other traffic tools. Weebly remains an extremely easy-to-use drag-and-drop website builder.

## 5. Snappages.com

Using beautiful, suitable, simple templates helps save a lot of design time. SnapPages is a highly rated drag-and-drop website builder that puts beautiful designs at the heart of every page.

SnapPages uses a parallax theme to divide web pages into sections. It also supports code snippets to integrate with MailChimp, YouTube, PayPal and other external utilities. This tool has two prices: 12 USD and 18 USD.

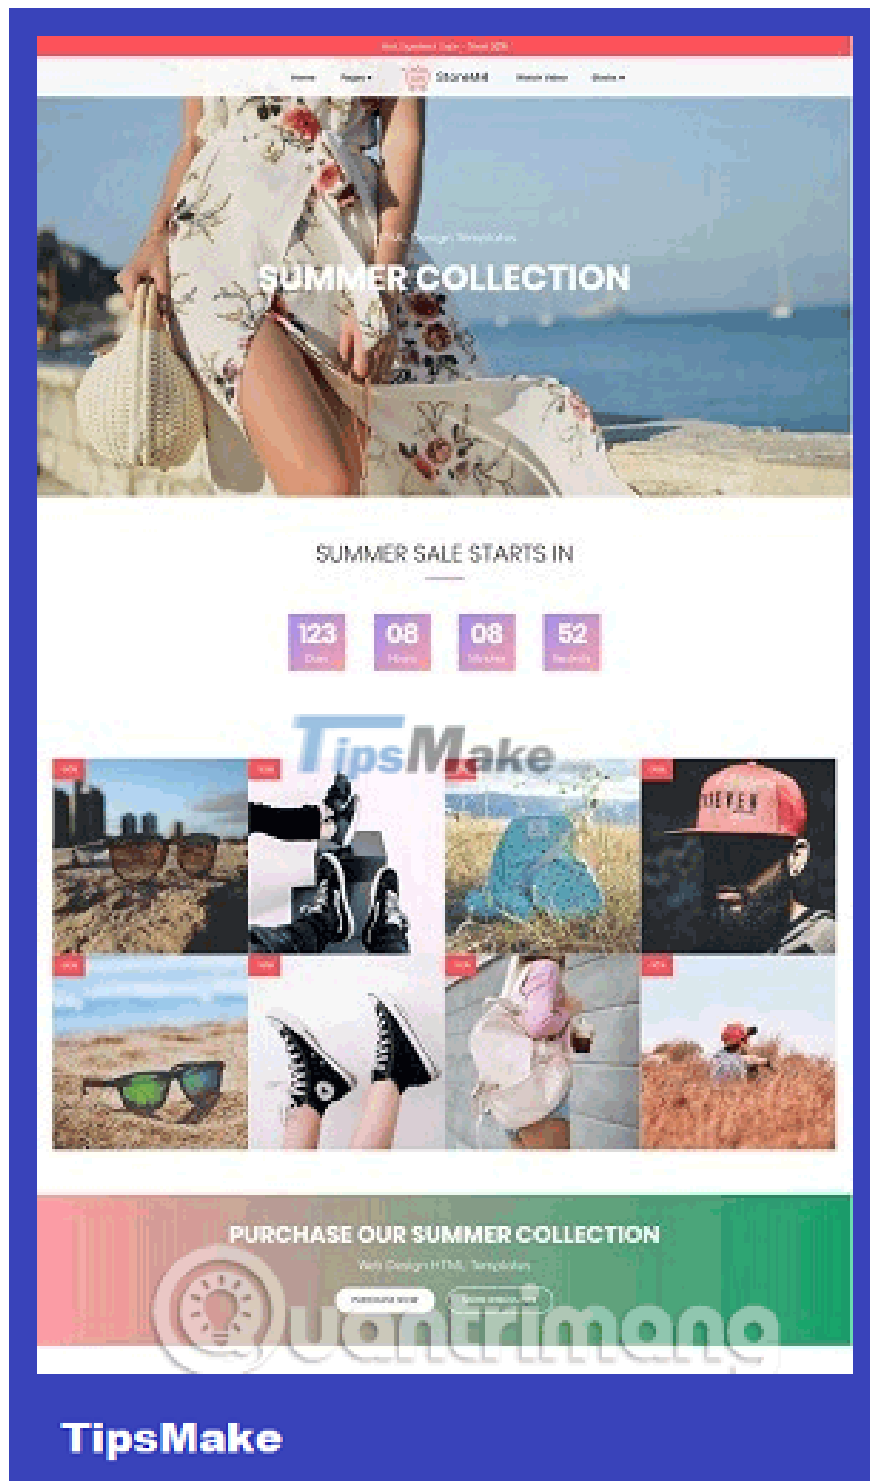

## 6. Mozello.com

Mozello is a small business based in Latvia and it has one of the easiest tools to build a personal website. Different from other tools, it has a real person on the support team who helps users solve website integration issues.

Mozello has elegant themes and drag-and-drop functionality but doesn't include many features, such as a WordPress blog. However, if you want a high-quality website at a cheap price, this is more than enough for many people's needs.

## 7. Mobirise.com

If you want a mobile responsive website with drag and drop features, Mobirise is the right choice. While all the previous tools have mobile responsive website settings, Mobirise is designed specifically for this purpose.

Simplicity is the most important feature of drag and drop website builders. With these tools, you will have a website in no time.
