

7 features that make Galaxy Z Flip 6 worth buying

Galaxy Z Flip 6 is one of Samsung's top folding screen phones in 2024.

Today's article will discuss all the outstanding features that Galaxy Z Flip 6 brings that make it worth the money you spend to buy the product.

1. Snapdragon 8 Gen 3 processor

If you're looking to buy a new smartphone in 2024 and want to get value for your money, performance is something that shouldn't be compromised.

Like Samsung's flagship Galaxy S24 Ultra, the Z Flip 6 is equipped with Qualcomm's Snapdragon 8 Gen 3 chip. According to Qualcomm's statement, this chip helps CPU performance increase by 30% and GPU performance increase by 25% compared to Snapdragon 8 Gen 2 in Z Flip 5.

2. Galaxy AI features

The Galaxy Z Flip 6 has all the best Galaxy AI features that Samsung introduced with the Galaxy S24 series. However, Samsung's folding screen product line has some new additions. One such example is the Photo Ambient feature, which allows setting an AI-powered wallpaper that changes based on time and weather.

Another Galaxy AI feature, called Interpreter, now works in Flex Mode. This feature essentially turns your device into a real-time translator, allowing two people participating in a conversation to view the translation simultaneously on both the main and external screens.

Finally, Samsung has added the Sketch to Image feature to create realistic images from sketches or drawings. You can also draw on top of captured photos to easily add realistic objects.

3. 12GB RAM

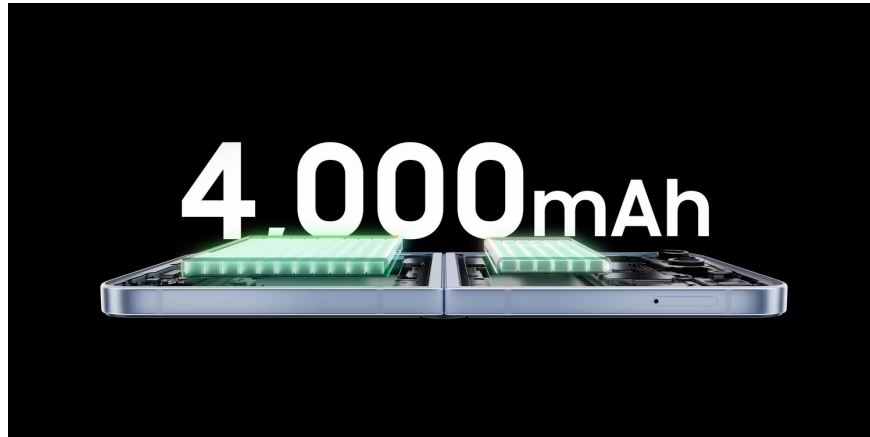

Considering today's high-end Android phones have 12GB RAM, Samsung's inclusion of 12GB as standard on the Z Flip 6 is very welcome. So, whether you go for the 256GB or 512GB storage variant, you will get the same amount of RAM.

Combined with the Snapdragon 8 Gen 3 chip, one can imagine how powerful this phone will be. This is also the first phone in the Z Flip series to have a heatsink, ensuring the device stays cool when performing heavy tasks such as playing games and running multiple applications at the same time.

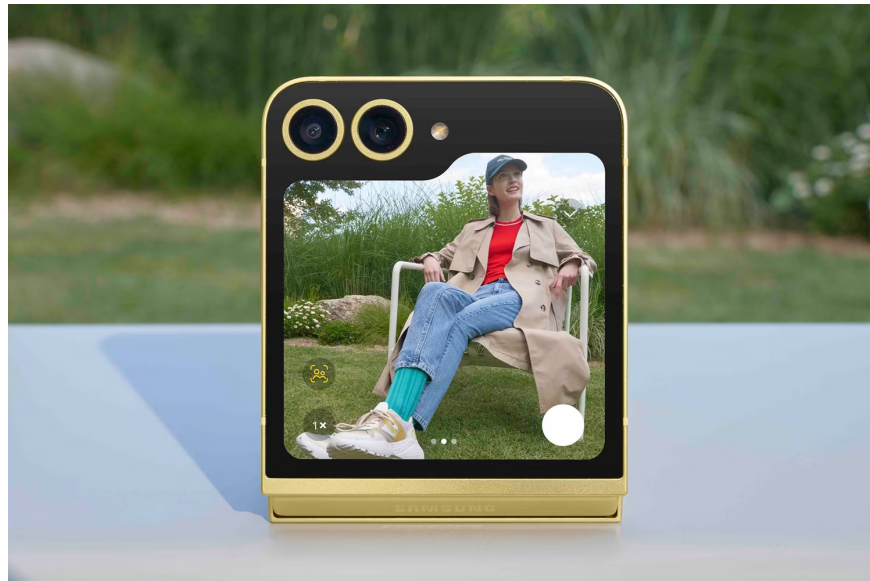

However, you can rest assured that the Galaxy Z Flip 6 can not only meet all your multitasking needs but also exceed your expectations.

4. 4,000mAh battery

Although the Galaxy Z Flip 6 is no thinner than its predecessor, it has a slightly larger 4,000mAh battery. Additionally, because the Snapdragon 8 Gen 3 chip is 20-25% more efficient than the 8 Gen 2, the Z Flip 6 will be usable all day long. Hopefully battery life is something you don't need to worry about with the Z Flip 6.

5. Main camera 50MP

Camera quality has always been one of the major disadvantages of folding screen phones. Thankfully, Samsung has solved this problem with the Z Flip 6 by adding a 50MP wide-angle main camera, like the one on the Galaxy S24.

Another useful AI feature you get has to do with the device's camera. With Auto Zoom, FlexCam can now automatically detect the subject of an image and find the best frame by zooming in and out.

The Galaxy Z Flip 6 also uses Samsung's ProVisual Engine, allowing it to capture images with incredible detail, even in low light conditions.

6. IP48 dust and water resistance

While an IP68 dust and water resistance rating isn't uncommon in the smartphone world, it's rare to come across a foldable phone that offers this standard. The Galaxy Z Flip 6 breaks this barrier with its IP48 rating, meaning it's not only water resistant, but it's also the first to offer some degree of dust protection.

IP48 rating provides protection from particles larger than 1mm. While this isn't the expected dust rating, it's certainly better than what we've seen with other IPX8-rated foldable phones.

7. Software updates for 7 years

In 2024, Samsung followed Google and extended software support for its high-end phones to 7 years. Therefore, like the Galaxy S24 series, the Galaxy Z Flip 6 will also receive 7 years of major Android upgrades and security updates. So if you tend to use your phone for long periods of time, the Galaxy Z Flip 6 could last until 2031.

While the Galaxy Z Flip 6 isn't revolutionary in the world of foldable devices, it's still a great choice if you're looking to buy your first foldable phone. Samsung's long-term software support ensures you won't need to upgrade to a newer phone due to outdated software.
