

7 note when using and storing laptops during breaks

In order to avoid the risk of loss or damage when using a laptop, we would like to introduce important technical notes to customers and customers, to avoid problems with laptops, causing problems. nuisance affects progress and work efficiency.

In order to avoid the risk of loss or damage when using a laptop, we would like to introduce important technical notes to customers and customers, to avoid problems with laptops, causing problems. nuisance affects progress and work efficiency. Especially in times of urgent work you need your laptop to work well.

These notes will save you millions of dong for repairs when the problem occurs.

1. Avoid and should not put items (*mouse, phone, usb, .*) on the laptop surface, there is a risk of folding the broken device, broken screen. This case certainly takes a million to buy a new monitor instead.

2. Avoid and do not leave or use a laptop on the floor. Do not leave the laptop in the floor to avoid the risk of a dehumidifying laptop moistening the machine, or the water being spilled into damaging components and machines.

3. Should turn off the device (*Shutdown*) before storing in bag / pair when not in use to ensure that the machine has no problems during the move. And in a bag to avoid weather, moist air outside the environment.

4. You should store the briefcase and laptop in the closet when not in use for a long time such as holidays, summer holidays, even for only 3 to 5 days.

5. Avoid leaving the laptop on the ground for a long time even for only a few hours to avoid the risk of laptop being moldy, bumped, broken.

6. Do not plug in the battery charger 24/24 or plug in the charger overnight. Plugging in the battery through the night is easy to get damaged by the power source at night. The strong and unstable power supply is easy to cause and stop the laptop power source. And restricting the use of laptops during long breaks, causing damage to some components due to main mold humidity, keyboard, battery damage .

7. Absolutely do not use laptops on blankets. The use of a laptop on the mattress is easy to wire the heater to increase the temperature, the machine is broken and there is a risk of fire. If the fire is not detected in time, it is easy to cause a fire.

Not useless at all when you take note when using and preserving laptops during the holidays above.
